# Health and Safety

---

## Section 1

# Health and Safety Policy

---

## Section 1.1

## 1.1 Health and Safety Policy

### Purpose

Our objective is a health and safety program that will reduce the number of injuries and illnesses to an absolute minimum, not merely in keeping with, but surpassing, the best experience of operations similar to ours. Our goal is zero incidents.

### Policy

Atlantic Roofers Limited/North Shore Roofing Ltd. recognizes that the responsibilities for health and safety are shared between all stakeholders. The personal health and safety of each employee of the company is of primary importance. The prevention of occupationally induced injuries, illnesses and loss is of such consequence that it will be given priority over operating productivity where necessary. To the greatest degree possible, management will provide all mechanical and physical facilities required for personal health and safety in keeping with the highest standards and a strong commitment toward occupational health and safety.

We will maintain a safety program conforming to the best practices of organizations of the same type. To be successful, such a program must start with proper attitudes toward injury and illness prevention on the part of both the employer and employees. It also requires co-operation in all health and safety matters, not only between management and employees, but also between each employee and their co-workers. Only through such a co-operative effort can a safety program be established and preserved in the best interest of all stakeholders. Management commits to working in a spirit of consultation and cooperation with all employees concerning matters relating to occupational health and safety. Atlantic Roofers Limited/North Shore Roofing Ltd. will work in cooperation and good faith to provide a safe and healthy working environment for all employees. This will be done through inspections, training, and all necessary safeguards that meet or exceed documented legislation.

### Responsibilities

Managers/Supervisors are responsible for developing the proper attitudes toward health and safety for themselves and for those they supervise, and for ensuring that all operations are performed with the utmost regard for the health and safety of all stakeholders. Employees are responsible for wholehearted, genuine cooperation with all aspects of the health and safety program, including compliance with all rules and regulations, and for continually practicing safety while performing their duties.

*\*The policies and procedures contained within this health and safety program do not take precedence over any occupational health safety and/or environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all provincial, federal and/or state occupational health, safety and environmental acts, regulations, policies and other legislative requirements prior to commencing work on any site or project.*

# Assignment of Responsibilities

---

## Section 1.2

## 1.2 Assignment of Responsibilities

The purpose of assigning specific responsibilities and accountability is to ensure all employees know their function and that our health and safety program accomplishes the objectives outlined in the health and safety policy.

### Management

The Management of Atlantic Roofers Limited/North Shore Roofing Ltd. accepts the responsibility for providing the leadership of the health and safety program, and will be accountable for its effectiveness and improvement.

#### Management is responsible to:

1. Establish a safety policy
2. Provide a safe workplace
3. Maintain a safety program
4. Ensure the proper training of workers
5. Ensure PPE is available
6. Ensure regular inspections are completed
7. Establish safe work practices and job procedures
8. Correct unsafe acts and conditions
9. Provide first aid
10. Investigate all accidents and near misses
11. Report injuries to appropriate Worksafe or WCB
12. Ensure compliance with regulations
13. Cooperate with Joint Occupational Health and Safety Committee
14. Set a good example

### Supervisor & Foreman

Supervisors and Foreman are responsible for developing proper attitudes toward safety and health in themselves and those they are directly responsible for and they will be accountable to Atlantic Roofers Limited/North Shore Roofing Ltd. management in all matters of health and safety

#### Supervisor and Foreman are responsible for:

1. Promote safety awareness
2. Enforce safe work practices
3. Instruct workers
4. Correct unsafe conditions and practices
5. Detect troubled employees
6. Enforce safety rules
7. Inspect for hazards
8. Investigate all incident, accidents and near misses
9. Ensure proper maintenance
10. Comply with company rules and OHS Act and Regulations
11. Set a good example

## **Employees**

Employees are responsible for their cooperation in all aspects of the health and safety program, and for continually practicing safety while performing their duties and will be accountable to their supervisor/foreman in matters of health and safety.

### **Employees are responsible to:**

1. Use safe work practices and job procedures
2. Report unsafe acts and conditions
3. Correct unsafe acts and conditions
4. Report any injury to the foreman
5. Comply with company rules and OHS Act and Regulations
6. Make safety suggestions
7. Set a good example
8. Report all incidents, accidents and near misses to your supervisor at once
9. Be responsible for your own safety and the safety of others at or near the site

## **Subcontractor**

Subcontractors are responsible for their cooperation in all aspects of the health and safety program, and for continually practicing safety while performing their duties and will be accountable to Atlantic Roofers Limited/North Shore Roofing Ltd. in all matters of health and safety.

### **Subcontractors are responsible to:**

1. Comply with Atlantic Roofers Limited/North Shore Roofing Ltd policies and procedures
2. Attend initial site orientation
3. Attend toolbox talks
4. Comply with OHS Act and Regulations
5. Ensure proper maintenance
6. Ensure PPE is available
7. Inspect for hazards
8. Correct unsafe conditions and practices
9. Investigate all incidents and accidents
10. Enforce safety rules
11. Set a good example

## **Visitors**

Visitors are responsible to comply with Atlantic Roofers Limited/North Shore Roofing Ltd. company rules and the Occupational Health and Safety Act and Regulations which include, but not limited to:

1. Compliance with site PPE requirements
2. Adherence to Atlantic Roofers Limited/North Shore Roofing Ltd. company rules
3. Comply with OHS Act and Regulations

## **First Aid Personnel**

For all jobs, the Foreman will appoint adequate person(s) to provide such first aid services as may be required given the nature of the job site and government regulations. The person(s) appointed to this position shall possess an appropriate certificate in First Aid in accordance with relevant regulations and must be available at all times to administer first aid.

### **First aiders are responsible to:**

1. Administer first aid as requested
2. Maintain a first aid log
3. Requisition first aid supplies and equipment
4. Assist Safety Officer when necessary

## **JOHSC/Safety Representative**

The JOHS/Representative will perform the functions as outlined in the Occupational Health and Safety Act and Regulations. The purpose is to use effective management processes and systems to prevent injury and illness, avoid costly lost time and property damage, manage workers' compensation assessments and maintain a productive work environment.

### **JOHSC/Representative is responsible to:**

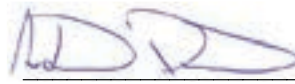

1. Hold regular meetings
2. Maintain minutes and records of committee activities
3. Work cooperatively with employees and management
4. Identify hazards, develop implement and evaluate health and safety program
5. Receive, investigate, all health and safety complaints, concerns and work refusals
6. Participate in inspections, inquires, investigations and audits
7. Advise on development, implementation and evaluation of health and safety program
8. Participate in educational training programs for employees
9. Advise on the use of PPE
10. Make written recommendations

# Employee's Rights

---

## Section 1.3

## 1.3 Employee's Rights

The Occupational Health and Safety Act outlines the basic rights of all employees:

1. **The Right to Know** – Every employee who works in a possible hazardous condition has the right to know the danger of the condition and how to protect themselves from the hazards. WHMIS (Workplace Hazardous Information System) is a Canada wide system designed to provide information about hazardous material used by employee's on the job (See WHMIS Policy).
2. **The Right to Participate** – Every employee has the right to participate in safety meetings when it concerns their safety at a worksite. This may be as a member of the Joint Occupational Health and Safety Committee or in a site specific safety meeting (toolbox). The primary purpose is to involve employees and management in the exchange of safety information.
3. **The Right to Refuse** – Every employee has the right to refuse to do work when there is reasonable grounds for believing that the act is likely to endanger the employee or the health and safety of any other person on site.
4. **The Right to Make a Complaint or File a Grievance** – Every employee has the right to make a complaint or file a grievance as set out in the Occupational Health and Safety Act.

Procedure to refuse unsafe work:

1. Report the hazard to your supervisor and work with them to correct the problem
2. If your supervisor disagrees with you regarding the safety of the situation, they will explain why and advise you to return to work
3. If you do not agree with the supervisor's opinion, the matter will be referred to the Joint Occupational Health and Safety Committee for investigation
4. If you do not agree with the opinion of the Committee, the matter will be referred to the appropriate governing body.

When an employee has refused to do a job, that job may be assigned to another worker if the employee is told:

1. That another worker has refused to do the job
2. Why the worker has refused the job
3. That they also have the right to refuse the job

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>F-01-1</b>
	Title: <b>Right to Refuse</b>	
Occupational Health & Safety Program	Page 1 of 2	

Step 1: The employee reports the concern to their immediate supervisor.

<p>I, _____, refuse to do the act assigned by my supervisor. I believe that this act is likely to endanger my health and safety (or the health and safety of others) for the following reason(s):</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; border: none;"><input type="checkbox"/> I am not properly trained for the job</td> <td style="width: 50%; border: none;"><input type="checkbox"/> Physical or mechanical hazards</td> </tr> <tr> <td style="border: none;"><input type="checkbox"/> I do not have enough experience for the job</td> <td style="border: none;"><input type="checkbox"/> Chemical hazards</td> </tr> <tr> <td style="border: none;"><input type="checkbox"/> I do not have the necessary skills for the job</td> <td style="border: none;"><input type="checkbox"/> Biological hazards</td> </tr> <tr> <td style="border: none;"><input type="checkbox"/> I do not have the necessary equipment for the job</td> <td style="border: none;"><input type="checkbox"/> Other (specify)</td> </tr> </table> <p>Detailed explanation:</p> <p>_____</p> <p>_____</p> <p>_____</p> <p>_____</p>	<input type="checkbox"/> I am not properly trained for the job	<input type="checkbox"/> Physical or mechanical hazards	<input type="checkbox"/> I do not have enough experience for the job	<input type="checkbox"/> Chemical hazards	<input type="checkbox"/> I do not have the necessary skills for the job	<input type="checkbox"/> Biological hazards	<input type="checkbox"/> I do not have the necessary equipment for the job	<input type="checkbox"/> Other (specify)
<input type="checkbox"/> I am not properly trained for the job	<input type="checkbox"/> Physical or mechanical hazards							
<input type="checkbox"/> I do not have enough experience for the job	<input type="checkbox"/> Chemical hazards							
<input type="checkbox"/> I do not have the necessary skills for the job	<input type="checkbox"/> Biological hazards							
<input type="checkbox"/> I do not have the necessary equipment for the job	<input type="checkbox"/> Other (specify)							
<p>Date Signed: _____, by _____</p> <p>Submitted to the supervisor _____ at(time) _____</p> <p>Signed by supervisor upon receipt: _____</p> <p>Answer from the supervisor:</p> <p><input type="checkbox"/> I find that _____ has reasonable grounds for believing that the act is likely to endanger the health and safety of the employee or the health and safety of others. Therefore, I recommend the following remedial action(s) to be taken or I will take the following remedial action(s) so that the employee may resume work.</p> <p><input type="checkbox"/> I find that _____ does not have reasonable grounds for believing that the act is likely to endanger his/her health and safety or the health and safety of any other employees. Therefore, I advise the employee to do that act.</p> <p>Date Signed: _____ at(time) _____</p> <p>Signature of supervisor: _____</p> <p>Signature of worker: _____</p>								

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>  Occupational Health & Safety Program	Date of last Revision: January 2018	Document No. <div style="text-align: right; font-size: 1.2em;"><b>F-01-1</b></div>
	Title: <span style="float: right; font-weight: bold; font-size: 1.1em;">Right to Refuse</span>	
		Page 2 of 2

Step 2: The employee refers the matter to the JHSC

The worker submits this formula to JHSC.

Received by: \_\_\_\_\_, representing the workers, and  
\_\_\_\_\_, representing the employer.

On (date) \_\_\_\_\_ at (time) \_\_\_\_\_

Answer: We, the members of the JHSC, have studied the reasons for this right to refuse submitted by: \_\_\_\_\_, and we make the following recommendation(s):

The JHSC finds the employee has reasonable grounds and make the following recommendation(s) to the employer:

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

Employer accepts recommendation       Employer refuses recommendation

\_\_\_\_\_ (Employer)

The JHSC finds that the employee does not have reasonable grounds for the following reason(s): \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

The JHSC cannot reach a decision and have the following positions: \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

The JHSC advises \_\_\_\_\_ to refer the matter to an officer of WorksafeNB

\_\_\_\_\_ (Employee Representative)

\_\_\_\_\_ (Employer Representative)

# Performance Evaluations

---

## Section 1.4

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>M-01-1</b>
Occupational Health & Safety Program	Title: <b>Supervisor Performance Evaluation</b> <span style="float: right;">Page 1 of 4</span>	

This section must be completed for all supervisors and should reflect their overall performance. The manager, in consultation with all direct reports, will complete it. It shall serve as a standard for all discussions and may be added to as need be. Each of the skills listed below are to be rated as follow:

<b>Employee Information</b>				
Employee: _____		Date: _____

# Subcontractor Policy

---

## Section 1.5

## **1.5 Subcontractor Policy**

### **Purpose**

Atlantic Roofers Limited/North Shore Roofing Ltd. and its contractors share responsibility for attempting to ensure that people are not harmed as a result of construction, maintenance or related activities. As a consequence, Atlantic Roofers Limited/North Shore Roofing Ltd. requires that contractors operate safely and in accordance with the appropriate legislation and the Atlantic Roofers Limited/North Shore Roofing Ltd. Health and Safety Program.

### **Policy**

Prior to being awarded a contract for construction and related work, all prospective contractors shall be informed of this policy and provided with a written outline of the safety performance expected of all contractors. The safety record of a prospective contractor shall be one of the factors considered in the awarding of a contract for construction or related work.

Atlantic Roofers Limited/North Shore Roofing Ltd. shall ensure that all subcontractors fully cooperate in ensuring the health and safety policies and procedure requirements of Atlantic Roofers Limited/North Shore Roofing Ltd. and the owner client are met or exceeded during the contract work.

### **Responsibility**

Atlantic Roofers Limited/North Shore Roofing Ltd. management is responsible for taking reasonable steps to ensure that work undertaken by contractors does not endanger people or property. This shall be accomplished through the following:

1. Ensuring that all subcontract companies and/or individuals are aware of Atlantic Roofers Limited/North Shore Roofing Ltd. health and safety policies, including those of the owner/client and the implications of those policies. This shall include orientation to owner/client drug and alcohol policies, where these exist.
2. Including all subcontractors in pre-job meetings, hazard assessments, safety meetings and incident investigations where reasonable or participating in the subcontractor job safety process to ensure the subcontractor work is carried out as planned and relevant legislation and job requirements are observed throughout the work.
3. Investigate all incidents/accidents reported by the subcontractor. Ensuring all incidents, as outlined in Atlantic Roofers Limited/North Shore Roofing Ltd. Incident Investigation Policy, are reported to the owner/client(s) by Atlantic Roofers Limited/North Shore Roofing Ltd.
4. Ensure an active inspection monitoring process is followed at the work environment throughout the duration of work to assess our subcontractor's competence at managing health and safety requirements of the work. Atlantic Roofers Limited/North Shore Roofing Ltd. shall reserve the right to stop or restrict the work of our subcontractors if in our opinion the work is not meeting job and/or legislative requirements.
5. Atlantic Roofers Limited/North Shore Roofing Ltd. shall conduct post job performance reviews on the health and safety performance of our subcontractors. These reviews may include, but not limited to, cost control, active participation in safety meetings, quality of work and housekeeping.

**Subcontractors are responsible to:**

1. Comply with their company safety policy and/or program or that of Atlantic Roofer Limited/North Shore Roofing Ltd. and the owner/clients, including adherence to the Drug and Alcohol Policy applicable to the work site. Read and sign off on the Atlantic Roofers Limited/North Shore Roofing Ltd. subcontractor Policy and ensure work is carried out in accordance to this policy. Provide documented evidence of an account of Letter of Good Standing in the Construction Safety Association, or equivalent, (COR) program, or Contractor declaration duly signed. (see attached) prior to beginning work and shall maintain its account in good standing throughout the performance of work.
2. Ensure that all equipment provided by the subcontractor is maintained in good condition and that it meets all the applicable legislative requirements and the standards of Atlantic Roofers Limited/North Shore Roofing Ltd.
3. Provide all necessary personal protective equipment and training to their personnel
4. Participate in all safety meetings, job hazard assessments, safety inspections and incident investigations as outlined in this policy.
5. Provide reports to Atlantic Roofers Limited/North Shore Roofing Ltd. as required including any and all incidents, including near miss incidents; as they occur.
6. Ensure to cooperate and consult with Atlantic Roofer Limited/North Shore Roofing Ltd. and the owner/client in the worksite monitoring process including any active incident investigations and post job reviews.
7. Immediately remove from an Atlantic Roofers Limited/North Shore Roofing Ltd. worksite any personnel who do not comply with site health and safety requirements.

- Preconstruction Subcontractor Safety Checklist (Form P-01-2)

### **1.5.1 Subcontractor Supplementary Information**

Subcontractors or any parties who receive a purchase or contract from Atlantic Roofer Limited/North Shore Roofing Ltd. are required to submit all supplementary information duly signed in order to be authorized to perform subcontract work on Atlantic Roofers Limited/North Shore Roofing Ltd. work sites.

1. Copy of Letter of Good Standing in the Construction Safety Association, or equivalent, (COR) Program, or Contractor Declaration duly signed. (see attached form A-01-3, subcontractor Declaration)
2. WHSCC/WCB/WorkSafe letter of good standing valid for the entire period of work
3. Certificate of insurance specifying Atlantic Roofer Limited/North Shore Roofing Ltd as additional insured.

This information has to be returned prior to access to any job sites of Atlantic Roofers Limited/North Shore Roofing Ltd.

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>  Occupational Health & Safety Program	Date of last Revision: January 2018	Document No. <b>P-01-1</b>
	Title: <b>Subcontractor Declaration</b> <span style="float: right;">Page 1 of 1</span>	

***Subcontractors or any parties engaged to work at any Atlantic Roofers Limited/North Shore Roofing Ltd. job sites must agree to participate in the following:***

1. Prior to starting work, complete a Pre-Job hazard assessment; this will identify all potential hazards and will outline corrective actions required to eliminate or control these hazards.
2. Conduct or participate in all on site Tool Box meetings, and where required play an active role as a member of the Work-site Safety Committee.
3. Ensure that any materials, controlled under WHMIS Legislation, are properly labeled and are accompanied with a current SDS on delivery to the job site.
4. Conduct regular Fall Protection inspections where working at heights is involved.
5. Provide adequate supervision and workers with appropriate training to perform the task(s) safely and in accordance with legislation.
6. Upon Request, provide Copies of all documentation to Atlantic Roofers Ltd./North Shore Roofing Ltd. to verify compliance with this policy.

All job site workers are required to have Safety Orientation and WHMIS training, at minimum. Additional training is as required for the task/work to be performed.

Subcontractors or any parties must have knowledge of and comply with the Occupational Health & Safety Act and any pursuant regulations, codes or practices relative to the work to be performed.

**Atlantic Roofers Ltd. /North Shore Roofing Ltd. reserves the right to require subcontractors, hired for work, to follow the terms of Atlantic Roofers Limited/North Shore Roofing Ltd. COR certified safety program.**

**Failure to comply with the terms of the Occupational Health & Safety Act and other policies governing the work site will result in disciplinary action up to and including the removal of any individual(s) from the worksite.**

# Hazard Assessment Analysis and Control

---

Section 2

# Hazard Assessment Policy

---

## Section 2.1

## 2.1 Hazard Assessment Policy

### Purpose

To provide a policy whereby Atlantic Roofers Limited/North Shore Roofing Ltd. can adequately evaluate each job and work site, evaluating and identifying job hazards with the goal to minimize employee exposure to hazards. This policy will also assist in the selection of personal protective equipment (PPE) to every affected employee, who as part of their job descriptions, are exposed to numerous chemical, physical and environmental hazards occurring at the workplace.

### Policy

It is the policy of Atlantic Roofers Limited/North Shore Roofing Ltd. to implement a systematic process for the identification and control of hazards. Atlantic Roofers Limited/North Shore Roofing Ltd. employees involved in the hazard identification and risk assessment will be provided training. The JOHSC/Representative shall be involved in the cooperative identification and mitigation of hazards in their workplace. The Health and Safety Program will use the following three approaches to control hazards:

1. **Engineering Controls** – are related to the design and layout of the workplace, workstation, or work process. Examples would include items such as changes to lighting, noise control, ventilation and installation of guards around moving parts.
2. **Administrative Controls** – deal with managing and directing people. Such a direction might include implementing new policy, modifying work practices and procedures, or providing training. Administrative controls also extend to areas of materials and equipment procurement, for example, less hazardous products may be obtained.
3. **Personal Protective Equipment** – generally involves placing a “barrier” between the worker and hazard. Examples would include respiratory protection, hand protection, eye protections, etc. PPE is to be used as a supplement to but not as a substitute for engineering controls. PPE may be used as a sole means of control if the use of other controls is not feasible.

### Responsibilities

#### Atlantic Roofer Limited/North Shore Roofing Ltd. will:

1. Perform a comprehensive annual hazard assessment for all activities, equipment, processes and property under the control of Atlantic Roofers Limited/North Shore Roofing Ltd.
2. Review the comprehensive hazard assessment annually to ensure its ongoing suitability for our operational needs.

#### Supervisors will:

1. Prior to the start of any job Atlantic Roofers Limited/North Shore Roofing Ltd. will perform a hazard assessment.
2. Be aware of the job and its hazards and record all concerns.
3. Report hazards to immediate supervisor or JOHSC/Representative
4. Hold weekly toolbox meeting

## **Responsibilities (cont')**

### **Employees will:**

1. Be aware of the job site and its hazards and record all concerns
2. Report hazards to immediate supervisor or JOHSC/Representative
3. Participate in daily site inspections and weekly toolbox meetings

### **Subcontractors will:**

1. Prior to the start of any job for Atlantic Roofers Limited/North Shore Roofing Ltd. will perform a hazard assessment to be reviewed by Atlantic Roofers Limited/North Shore Roofing Ltd.
2. Be aware of the job site and its hazards and record all concerns
3. Participate in daily site inspections and toolbox meetings
4. Participate in initial site orientation prior to any work being done.

## **Duty to Report Hazards/Resolution Procedures**

All employees have a responsibility to report hazards and participate in their resolution. Where an employee believes that any condition, device, equipment, machine, material thing or any other aspect of the workplace is or may be dangerous, the employee shall:

1. Resolve hazard if they have the authority to do so
2. Report hazard immediately to their supervisor
3. If the problem is not remedied to employee's satisfaction, report it to the JOHSC/Representative
4. If the problem is still not remedied to their satisfaction, report it to the appropriate Government department.

*Note: The occupational health and safety act protects persons exercising this duty from any discipline or discriminatory actions (see employee rights in section 1.3 of this program)*

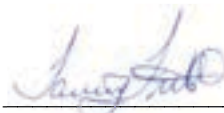

*\*The policies and procedures contained within this health and safety program do not take precedence over any occupational health safety and/or environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all provincial, federal and/or state occupational health, safety and environmental acts, regulations, policies and other legislative requirements prior to commencing work on any site or project.*

### Types of Hazard Assessment

Hazard Assessments will be conducted under the following circumstances:

<b>Annual Facility Hazard Assessment</b>	This type of assessment will be conducted for all fixed facility locations at least <b>annually</b> . The safety coordinator and/or JOHSC member will use the “Comprehensive Hazard Assessment Annual Review ” form S-02-1 and submit it within 2 days to Branch Manager for actions required, follow up, record keeping and filing.
<b>Roof Loading Assessment</b>	Managers/Supervisors will use the “Roof Loading Assessment” form <b>P-02-1</b> and submit to the Branch Manager prior to work starting for actions required, follow up, record keeping and filing. Any condition that requires action must be completed before start up. A copy <u>must</u> be kept on all job sites for the duration of the project. This type of assessment must be conducted prior to commencement of all projects where roof loading will take place.
<b>“Small” Job Site Hazard Assessment</b>	This “Small Job” will be defined as a job site length of <b>5 days or less</b> . Supervisors will use the “Field Level Risk Assessment” form <b>F-02-3</b> . This type of hazard assessment must be conducted prior to commencement of all projects. All hazards that require action must be corrected prior to starting the project. The completed form must be submitted by the end of the week it was conducted to the Branch Manager for actions required, follow up, record keeping and filing. A copy <u>must</u> be kept on all job sites for the duration of the project.
<b>“Large” Job Site Hazard Assessment</b>	This “Large Job” will be defined as a job site length of <b>more than 5 days</b> . Project Managers/Supervisors will use the “Large Job Hazard Assessment” form <b>F-02-1</b> and submit by the end of the week it was conducted to the Branch Manager for actions required, follow up, record keeping and filing. Prior to starting the project all noted hazards must be corrected. A copy <u>must</u> be kept on all job sites for the duration of the project. This type of hazard assessment must be conducted prior to commencement of all projects.
<b>Field Level Hazard Assessment</b>	Field level hazard assessments must be conducted on a daily basis by the supervisor and signed by all employees present during that day. Supervisors will use the duplicate booklet provided (“Field Level Risk Assessment” <b>F-02-3</b> ) and submit by the end of the week it was conducted to the Branch Manager for actions required, follow up, record keeping and filing. Prior to work starting for the day all noted hazards must be corrected. A copy <u>must</u> be kept on all job sites for the duration of the project.

## Section 2.2

## 2.2 Hazard Ranking by Risk (Consequences and Probability)

Once a hazard has been identified, hazard ranking provides us with a gauge to determine where to start, as with most elements in a safety program, our priorities will be determined by addressing the worst first.

Hazard Consequence Category:

- A Catastrophic - May cause death, injury, or company shutdown
- B Critical - May cause severe injury, severe occupational illness or major property damage
- C Marginal - May cause minor injury or minor occupational illness resulting in workday(s) lost, or minor property damage
- D Negligible - Probably would not affect personnel safety or health. Could result in a lost workday, and is still in violation of specific criteria

Hazard Probability Category:

- 1 Probable - Likely to occur immediately or within a short period of time when exposed to the hazard
- 2 Reasonably Probable - Probably will occur in time
- 3 Remote - Possible to occur in time
- 4 Extremely Remote - Unlikely to occur

During the implementation of the safety program, you will want to focus on hazards that fall in the A1, A2, B1 and B2 rating. As time permits, all potential hazards should have controls identified and implemented.

**Remember – Regulatory requirements may dictate priorities**

### Hazard Assessment Techniques

#### General

A hazard assessment will identify any potential and apparent hazards in the work environment. To eliminate or control the hazards, actions will be taken prior to starting work at the site.

The basic procedures for conducting a hazard assessment are:

1. Assemble the people that will be involved
2. Discuss possible hazards with these people
3. Tour the entire operations of the company
4. Look for possible hazards originating with environment, material, equipment and people
5. Keep asking the questions “What if?”
6. Record all hazardous situations
7. Rank the items on a “Worst first” basis
8. Identify corrective action required
9. Assign a person responsible for each correction and date to complete

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>  Occupational Health & Safety Program	Date of last Revision: January 2018	Document No. <b>F-02-1</b>

		Title: <b>Roof Loading Assessment (RLA) (NB ONLY)</b> Loading Pallets of Roofing Materials on Roof	

*(Applicable for roof slopes not exceeding 3:12 – Pallet minimum dimension 44” – Pallet maximum weight 2,900 lbs.)*

Job Site Name:	Building Owner:	
Job Site Address:		
Description of Roof Area:		
Assessed by:		
(Print)	(Signature)	Date: (mm/dd/yyyy)

**Step 2 – Table A – Structure**

		Joist Span (ft.)												
		10	12	14	16	18	20	24	26	28	30	32	34	36
Joist Spacing (ft.)	2	Type X Cribbing Required												
	3	Type X Cribbing Required												
	4	Type X Cribbing Required												
	5	Type X Cribbing Required												
	6	Type X Cribbing Required												
	7	Cribbing May Not be Required Depending on Deck Type See Table B												
	8	Cribbing May Not be Required Depending on Deck Type See Table B												
	9	Cribbing May Not be Required Depending on Deck Type See Table B												
	10	Cribbing May Not be Required Depending on Deck Type See Table B												

**Assumptions for table A:**

- Based on 40 psf roof live load.
- Assumed pallet size is 44 inch square x 2900 lb.
- Cribbing Requirements Apply.

**Note – Light Weight Loads**

Pallets/Materials imposing a loading of less than 40 psf may be placed directly on the roof without assessing the roof strength *provided* that there is no indication of damage or deterioration to the supporting deck or structure.

**Step 4 – Table B – Deck Type**

- 1.5” steel** – If joists are spaced more than 5 feet on center, support load on Type X Cribbing
- 3” steel** – If joists are spaced more than 8 feet on center, support load on Type X Cribbing
- Siporex/Fiber Cement** – If joists are spaced more than 4 feet on center, support load on Type X Cribbing
- Plank** – Typically 38mm, 64mm, or 89mm thick.
  - 38mm thick planks – If joists are spaced more than 5 feet on center, support load on Type X Cribbing
  - 64mm thick planks – If joists are spaced more than 8 feet on center, support load on Type X Cribbing
  - 89mm thick planks – If joists are spaced more than 10 feet on center, support load on Type X Cribbing
- Plywood/OSB/Board** – If joists are spaced more than 4 feet on center, support load on Type X Cribbing
- Concrete** – If span between slab supports is more than 6 feet, support load on Type X Cribbing

**Step 5 - Required Roof Loading Protocol (Identify appropriate requirement based on the above Assessment)**

- Cribbing Not Required:** No Cribbing is needed to spread out the pallet load.
- Do not apply any load to damaged/deteriorated areas**
- Type X Cribbing:** 8’ minimum length cribbing to be laid perpendicular the joists (see **Cribbing Requirements** below). Cribbing to span and to be centered across two or more joists or, if not possible to confirm, use cribbing with a minimum length of 2 times the joist spacing.
- Type Y Cribbing:** 16’ minimum length cribbing to be laid diagonally (45°) to roof edge (see **Cribbing Requirements** below).

**Cribbing Requirements:**

- Cribbing to be minimum 6” x 6” spf # 2, length as indicated. Two pieces of cribbing per pallet.
- Cribbing to be placed such that any one joist gets load from one pallet only. Cribbing for different pallets must never extend over the same joist.
- Pallets are to be positioned near the center of the length of the cribbing in all instances.

	Title: <b>Fall Protection Plan (FPP)</b>	

Planning plays a key role in protecting workers from fall hazards. The fall protection plan shall be:

- Designed and completed to address site-specific conditions
- If project is not completed on consecutive days a new FPP and ERP Orientation must be completed
- All employees will sign the Emergency Response Orientation acknowledging the FPP has been reviewed prior to starting work

# Safe Work Practices

---

## Section 3

# Safe Work Practice Policy

---

## Section 3.1

### 3.1 Safe Work Practice Policy

#### Purpose

To provide Atlantic Roofers Limited/North Shore Roofing Ltd. employees with the skills and knowledge required to develop safe work practices around hazardous conditions in company offices and job sites. They are used to train new employees and workers that moved to new jobs and are also used as references, especially for complex jobs, particularly hazardous jobs, or for jobs that are not done very often.

#### Policy

Safe Work Practices are a set of positive guidelines concerning the performance of a specific task that may not always be completed in a certain way. Safe work practices are a way of controlling hazards and performing jobs with a minimum risk to people, process, environment and property.

The most applicable and critical safe work practices will be written in an easy to understand format readily available to every supervisor, employee, or general public for regular use on all job sites or grounds. The process of developing new or modifying existing, safe work practices must ensure that the guidelines governing conduct for specific work activities meet or exceed applicable industry standards and all provincial, federal and/or state acts, regulations, policies and/or legislation.

#### Responsibilities

##### Management

Atlantic Roofers Limited/North Shore Roofing Ltd. is responsible to ensure that existing safe work practices remain current and meet requirements of the work and regulations, supervisors, and employees may be involved in the process of reviewing the most applicable critical safe work practices

##### Supervisors

Supervisors are responsible for the review of safe work practices in response to changes in legislation, changes in industry standards, or accident/incident investigations.

##### Employees

Employees are responsible to read, understand and comply with all company policies, procedures, and rules.

*\*The policies and procedures contained within this health and safety program do not take precedence over any occupational health safety and/or environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all provincial, federal and/or state occupational health, safety and environmental acts, regulations, policies and other legislative requirements prior to commencing work on any site or project.*

**General**

Asbestos is a naturally occurring material once used widely in the construction industry. Its strength, ability to withstand high temperatures, and resistance to many chemicals made it useful in hundreds of applications. However when asbestos is inhaled, it can be harmful and lead to the following diseases:

- Asbestosis (scarring of lung tissue)
- Lung cancer
- Mesothelioma (cancer of the lining of the chest and/or abdomen)

<b>Hazards Present</b>		
● Inhalation		
<b>Protective Mechanisms</b>		
● Eye Protection	● Respiratory Protection	● Manufacturers
● Hand Protection	● Disposable clothing	● Recommendations

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO work in a well-ventilated area and, where possible, in the open air (but not on windy days)</li> <li>● DO thoroughly wet down the material before you start and regularly during the work by lightly spraying surfaces with water or a 1:10 polyvinyl acetate (PVA): water solution, or with low-pressure water from a garden hose (if outdoors); keep it wet until packaged for transport</li> <li>● DO use non powered hand tools (e.g. a guillotine, hand saw or hand powered drill) as these generates smaller amounts of dust and waste chips that are coarser than those generated when using power tools</li> <li>● DO inform neighbors of the proposed work, and advise them to close doors and windows while the work is being undertaken</li> <li>● DO keep visitors away until the work is completed (use barricades and signs if necessary)</li> <li>● DO remove ALL protective wear and dispose of with other asbestos waste</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT work with asbestos on a windy day</li> <li>● DO NOT reuse or recycle asbestos waste</li> <li>● DO NOT dump asbestos waste illegally</li> <li>● DO NOT spread asbestos dust through areas of the building that are not protected by plastic sheeting</li> <li>● DO NOT use high pressure water jets to wet surfaces as this may increase the spread of loose fibres or dust</li> <li>● DO NOT walk on corrugated asbestos cement roofs – many people have been injured by falling through while attempting to treat or repair roof surface</li> <li>● DO NOT wet down roofing sheets if this creates a high risk of slipping off a roof</li> </ul>
---	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Prior to commencing work in any area, request a copy of the owner’s Asbestos Report</li> <li>● If there is asbestos in the work area and it needs to be removed to perform the work, request that the owner remove it</li> <li>● Do not commence work until you have received a notice from the owner in writing that the asbestos has been removed and it is safe to commence or return to work</li> <li>● If there is asbestos in the work area and its presence does not impact the work, advise workers of location and what not to disturb</li> </ul>
---

### Employee Responsibility

- In all projects, bear in mind the possible presence of asbestos
- If you are working in an area known to contain asbestos, contact your supervisor to determine whether or not asbestos is present in the work area or adjacent areas in which you may be working
- If there is any doubt about pipe or duct insulation, textured ceilings, vinyl asbestos floor tile, flooring sheet goods, wall cladding or underground piping, especially in older facilities, do not commence work and notify your supervisor

Note: To remove Asbestos a worker requires knowledge of the type of asbestos, knowledge of the proper choice and use of PPE and Respirators, understanding of containment procedures and knowledge of proper handling, storage and waste removal procedures. For type 3 removals, training is a legal requirement.

**DO NOT REMOVE OR DISTURB ASBESTOS CONTAINING MATERIAL. IF YOU ARE INSTRUCTED TO DO SO, STOP WORK AND CONTACT YOUR SUPERVISOR.**

**General**

Most lifting accidents are due to improper lifting methods. All manual lifting should be planned and safe lifting procedures followed.

Hazards Present		
<ul style="list-style-type: none"> <li>● Back Strain</li> <li>● Lower Limb Disorders</li> </ul>	<ul style="list-style-type: none"> <li>● Damage to Musculoskeletal System</li> <li>● Cuts, bruises, fractures</li> </ul>	<ul style="list-style-type: none"> <li>● Neck &amp; Upper Limb Disorders</li> <li>● Acute Trauma</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● PPE</li> <li>● Safe Lifting Procedures</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Job Procedure</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● ERP (Emergency Response Plan)</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO tuck in the chin to keep the back as straight as possible while lifting</li> <li>● DO lift with the strong leg muscles</li> <li>● DO use mechanical equipment to move heavy items when possible (loaders, forklifts &amp; hoists)</li> <li>● DO keep reach to a minimum and lift as close to your body as possible</li> <li>● DO ask for help with heavy, awkward items</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use your back muscles to do lifting</li> <li>● DO NOT try to lift an item that is too heavy or awkward</li> <li>● DO NOT twist your body while carrying an object</li> <li>● DO NOT attempt team lifting without proper coordination</li> <li>● DO NOT overexert</li> </ul>
---	--

**Team Lifting**

If the weight, shape or size of an object makes it tough for one person to handle, team up. Workers should be close to the same size for team lifting. One worker should be responsible for control of the action to ensure proper coordination. Work together! Injuries can happen if one of you lifts too soon, shifts the load, or lowers it improperly.

**Good Handling Technique for Lifting**

- Remove obstructions from the route
- For a long lift, plan to rest the load mid-way on a table or bench to change grip
- Keep the load close to the waist. The load should be kept close to the body for as long as possible while lifting
- Keep the heaviest side of the load next to the body
- Adopt a stable position and make sure your feet are apart, with one leg slightly forward to maintain balance

**Supervisor Responsibility**

- Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training
- Selection of lifting equipment

### Employee Responsibility

- Ensure that you know your physical limitations and the approximate weight of materials
- The use of power equipment or mechanical lifting devices should be considered and employed where practical
- Obtain assistance in lifting heavy objects
- Ensure a good grip before lifting and employ proper lifting technique
- Avoid reaching out
- Pipes, conduit, reinforcing rods and other conductive materials should not be carried on the shoulder near exposed live electrical equipment or conductors
- Be aware of hazardous and unsafe conditions

Wrong Way to lift

Right Way to Lift

**General**

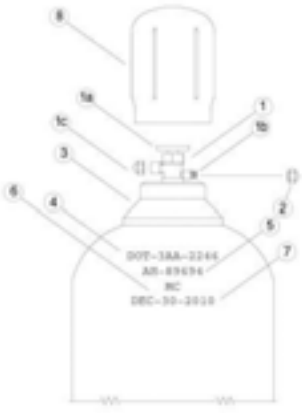

Compressed gas cylinders are used in a variety of tasks. While the tasks and gases may vary, the hazards and safe operation and handling practices for gas cylinders are similar. By following the safe work practices listed below, you can help reduce the risk of injuring yourself or others while using and handling this equipment.

Hazards Present		
● Fire	● Explosion	● Corrosion
Protective Mechanisms		
● Eye Protection	● Respiratory Protection	● Manufacturers Recommendations
● Hand Protection	● WHMIS Training	● Safe Work Practice

- Do**
- DO ensure there is clear labeling appears on each cylinder stating the contents in accordance with WHMIS legislation
  - DO store cylinders upright and in a dry, well ventilated area away from doors, stairs, elevator shafts, traffic, and heat sources. **Propane cylinders should always be kept upright.**
  - DO ensure cylinders are not secured to equipment that could become part of an electrical circuit
  - DO post a “No Smoking” sign near the storage area
  - DO keep full cylinders separated from empties
  - DO properly secure cylinders to keep them from falling during storage, transportation, and use.
  - DO use proper moving equipment like dollies or lifting cradles, or ask for assistance if equipment is not available. Gas cylinders can be very heavy, and they can be very dangerous if handled incorrectly
  - DO remove the regulator and replace the cap, if applicable, before moving cylinders
  - DO keep the valve keys or wrenches with the cylinders so they can be closed quickly if needed

**Do not**

- DO NOT rely on the color of the cylinder for identification. Color coding is not reliable because cylinder colors may vary with the supplier
- DO NOT slide, drag, or drop cylinders
- DO NOT use a leaky cylinder. Notify your supervisor and the supplier

**GAS CYLINDER PARTS**

1. Cylinder Valve
  - a. Valve Handwheel
  - b. Valve Outlet Connection
  - c. Pressure Relief Device
2. Valve Outlet Cap
3. Cylinder Collar
4. DOT Specification
5. Serial Number
6. Manufacturer's Symbol
7. Test Date
8. Cylinder Cap

- Supervisor Responsibility**
- Supervisors are responsible to facilitate and/or provide proper instruction on PPE and training
  - Enforcement
  - Compliance

**Employee Responsibility**

- Ensure you are trained in the use and handling of compressed gas cylinders
- Take special precautions when working with and around this kind of equipment
- Check valves for leaks using a soapy liquid around the valve connection
- Store different gases separately and isolated from other flammables such as gasoline

TRANSPORT cylinders in an upright position, secured on a vehicle or trolley designed for that purpose.

**\* Regulatory Reference**

NB OHS & Reg 91-191, (Jul 1, 2011) Part VIII, Section 74 to 79

**General**

Cylinder leaks usually occur at welded seams (on low pressure cylinders) or at the cylinder valve. Proper quality control of materials and inspections lessen the probability of cylinder leaks.

Hazards Present		
• Fire	• Explosion	• Corrosion
Protective Mechanisms		
• Eye Protection	• ERP (Emergency Response Plan)	• Manufacturers Recommendations
• Hand Protection	• WHMIS Training	• Safe Work Practice

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO check equipment regularly and every time it is set up for gas leaks at cylinder valves, regulators and connections</li> <li>• DO use soapy water (non-fat solution), approved leak-test solution, or detection equipment to check for gas leaks</li> <li>• DO attach a regulator to temporarily stop a leak through the cylinder valve</li> <li>• DO attach a tag stating that the container is defective if a leak cannot be stopped by tightening the valve or packing nut</li> <li>• DO wear a gas mask or self-contained breathing apparatus if the gas is toxic</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT rely on the color of the cylinder for identification. Color coding is not reliable because cylinder colors may vary with the supplier</li> <li>• DO NOT use a flame to check for gas leaks</li> <li>• DO NOT use a leaky cylinder. Notify your supervisor and the supplier</li> <li>• DO NOT ship leaking cylinders</li> <li>• DO NOT repair equipment under pressure</li> </ul>
--	---

**4 Distinct areas where leaks at the cylinder valve occur:**

- **Valve Threads** – where the valve screws into the cylinder (commonly referred to as “neck leakers”). These types of leaks cannot and should not be repaired in the field. NEVER repair equipment under pressure. This should only be handled with the assistance of the supplier.
- **Pressure Relief Device** – can occur at 2 points – 1. Around its threads or 2. Through its relief channel. These types of leaks cannot and should not be repaired in the field. NEVER repair equipment under pressure and NEVER tamper with pressure relief devices. Contact your supplier for immediate assistance
- **Valve Stem** – can occur along the valve stem through the packing or diaphragms. Leaks of this nature can be stopped by closing the valve and venting any pressure from the outlet. This should be reported to the supplier so they can advise if that particular valve design will allow a packing adjustment to correct the problem or if arrangements must be made to return the cylinder to the supplier.
- **Valve Outlet** – Can occur due to leak-through at the seat. Many times this can be corrected or prevented by using proper valve operational techniques. When proper closing procedures fail to completely stop leakage, a pressure tight outlet seal can be installed to stop the leak. Always contact the supplier for assistance.

### **Supervisor Responsibility**

- Supervisors are responsible to facilitate and/or provide proper instruction on PPE and training
- Enforcement
- Compliance

### **Employee Responsibility**

- Ensure you are trained in the use and handling of compressed gas cylinders
- Take special precautions when working with and around this kind of equipment
- Store different gases separately and isolated from other flammables such as gasoline

**General**

When attached to cylinders, Pressure Regulators reduce the high pressure from a propane cylinder to low working pressure for torching operations.

Hazards Present		
● Fire	● Explosion	● Corrosion
Protective Mechanisms		
● Eye Protection	● ERP (Emergency Response Plan)	● Manufacturers Recommendations
● Hand Protection	● WHMIS Training	● Safe Work Practice

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO leave key wrenches on cylinders in use so the cylinders can be closed quickly</li> <li>● DO ensure that connections between the regulators and cylinder valves are tight</li> <li>● DO check the accuracy of regulator pressure gauges at least yearly</li> <li>● DO bond and ground all cylinder lines and equipment used with flammable gases</li> <li>● DO use wrench of proper size for attaching regulator to cylinder</li> <li>● DO work in a well ventilated area</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use pipe wrench or pliers for attaching regulator to cylinder</li> <li>● DO NOT use a regulator intended for use with another gas</li> <li>● DO NOT use oil or grease to lubricate tight threads, can cause explosion</li> <li>● DO NOT use cylinders without a regulator</li> <li>● DO NOT use compressed gas to blow away dust or dirt</li> <li>● DO NOT extinguish a combustible gas flame until the source of gas has been shut off. The gas can re-ignite and explode</li> </ul>
--	--

<p><b>Regulator Use</b></p> <ul style="list-style-type: none"> <li>● Make sure the regulator threads match the cylinder valve outlet threads. Clean cylinder valve before coupling with regulator. Connect the regulator to the cylinder’s outlet valve.</li> <li>● Fit flashback arrestors or check valves between cylinders and equipment when using a flammable gas or when doing a procedure at cylinder pressure.</li> <li>● Use regulators designed for the contents of the cylinders. Regulators are not to be used to stop the flow of gas from the cylinder. Close the main cylinder valve when the gas is not being used. Regulators can leak and allow excessive pressures to develop in equipment.</li> </ul> <p><b>On</b></p> <ol style="list-style-type: none"> <li>1. Check that flow control valve is closed</li> <li>2. Turn the pressure adjusting screw counter clockwise until it turns freely</li> <li>3. Slowly open the cylinder valve fully</li> <li>4. Check the cylinder pressure gauge for expected value. A difference indicates that valve, safety device, or plugs are leaking</li> <li>5. Turn the pressure adjusting screw clockwise until the required pressure is reached</li> <li>6. Control the gas flow by the flow control valve</li> </ol> <p><b>Off</b></p> <ol style="list-style-type: none"> <li>1. Shut cylinder valve first</li> <li>2. Allow residual gases in valves to drain</li> <li>3. Shut pressure adjusting screw when gauges fall to zero</li> <li>4. Close the flow control valve</li> </ol>
--

DO NOT ADJUST pressure by using the regulator to control flow rates. This defeats the purpose of the pressure regulator. When higher flows are obtained this way, the pressure may be above the design of the system.

**Set-up Considerations**

- Use a gas detector to warn of leaks when handling toxic gas cylinders
- When using corrosive gases, work the cylinder valve frequently to prevent freezing. Flush regulators and valves with dry air or nitrogen after each use in corrosive service. Do not leave control devices on these cylinders, except in frequent use. Before discharging corrosive gases into a liquid trap, always use a check valve or a vacuum break device to prevent a dangerous suck-back.
- Remove regulators from empty cylinders. Replace the protective caps. Mark the cylinder “MT”. Never empty a cylinder completely. Leave a slight pressure to keep contaminants out.

**Supervisor Responsibility**

- Supervisors are responsible to facilitate and/or provide proper instruction on PPE and training
- Enforcement
- Compliance

**Employee Responsibility**

- Ensure you are trained in the use and handling of compressed gas cylinders
- Take special precautions when working with and around this kind of equipment
- Store different gases separately and isolated from other flammables such as gasoline

**General**

Protecting employees and general public from injuries associated with the use of cleaning solvents. Cleaning solvents are used in construction work to clean tools, equipment and within the shop, for general cleaning.

Hazards Present		
<ul style="list-style-type: none"> <li>● Respiratory damage/death</li> <li>● Flammable</li> </ul>	<ul style="list-style-type: none"> <li>● Contact with skin</li> <li>● Explosive</li> </ul>	<ul style="list-style-type: none"> <li>● Property Damage</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● WHMIS</li> <li>● SDS in place and current</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice/Procedure</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● ERP (Emergency Response Plan)</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure you consult with the appropriate SDS information sheet prior to use</li> <li>● DO clean up spills quickly and properly using appropriate spill kits and PPE</li> <li>● DO have appropriate emergency procedures in place</li> <li>● DO use personal protective equipment</li> <li>● DO keep product containers tightly sealed when not in use</li> <li>● DO substitute for a less hazardous method when possible</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT allow unprotected workers in the area where solvents are being used</li> <li>● DO NOT horseplay or joke around when using solvents</li> <li>● DO NOT leave oil soaked rags lying around. They could heat up and spontaneously combust</li> <li>● DO NOT dispense flammable and combustible liquids near an ignition source</li> <li>● DO NOT pour waste flammable liquids down sinks or drains</li> <li>● DO NOT use safety containers that are damaged in any way</li> </ul>
---	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate/or provide proper instruction on PPE and training</li> <li>● Must be aware of all solvents that are used on the job</li> </ul>
---

**Employee Responsibility**

- Ensure all WHMIS requirements are met
- Check toxic hazards of all solvents before use (SDS)
- When breathing hazards exist, use the appropriate respiratory protection
- Use non-flammables and solvents in special storage areas
- Ensure that proper containers are used for transportation, storage and field use of solvents/flammables
- Do not use solvents in areas where food may be contaminated
- Use approved containers for disposal of rags and other work
- Know how to handle emergencies. Review the ERP (emergency response plan) prior to using solvents

**General**

With electricity, we are dealing with something that cannot be seen and is still the most useful power controlled by man. It is useful but can be a very destructive power to both man and material if the proper precautions are not taken. The danger is always there and we must know what means of protection can be used to eliminate the hazards. All electrical work must be carried out according to the applicable Legislation.

Hazards Present		
<ul style="list-style-type: none"> <li>● Electrocution</li> <li>● Fall from Height</li> </ul>	<ul style="list-style-type: none"> <li>● Electrical Shock</li> </ul>	<ul style="list-style-type: none"> <li>● Electrical Burn</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Following Safe Work Practices/Procedures</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Regional &amp; Federal Regulations</li> <li>● Company Rules</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturer’s Instructions and Warning Labels</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO locate computers, small appliances, etc next to power sources wherever possible</li> <li>● DO use power bars that are CSA-certified and have overload protection</li> <li>● DO ensure that only qualified workers (i.e. electricians) are authorized to work on electrical conductors and equipment</li> <li>● DO keep power cords away from heat, water and oil which can damage the insulation and cause an electrical shock</li> <li>● DO disconnect the power supply to a power tool before making any adjustments</li> <li>● DO ensure that tools are properly grounded (i.e. 3-wire cord with 3-prong plug that is plugged into a grounded 3-pole outlet) or double insulated</li> <li>● DO inspect all power tools, power cords and electrical fittings for damage or wear prior to use. Repair or replace damaged equipment immediately</li> <li>● DO only use cords or equipment that is rated for the level of amperage or wattage that you are using</li> <li>● DO always use a ladder made of non-conductive material (e.g. fiberglass) when working with or near electricity or power lines</li> <li>● DO be aware that unusually warm or hot cords or outlets may be a sign that unsafe conditions exist. Unplug any cords and do not use outlets until an electrician has checked them</li> <li>● DO keep power cords clear of tools during use</li> <li>● DO ensure tools are switched OFF before connecting them to a power supply</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use an extension cord as a permanent power supply</li> <li>● DO NOT use any broken or unsafe electrical equipment</li> <li>● DO NOT repeatedly reset the same electrical break or replace the same electrical fuse. Notify the maintenance supervisor of the problem</li> <li>● DO NOT carry power tools by their electrical cord</li> <li>● DO NOT clean power tools with flammable or toxic solvents</li> <li>● DO NOT use electrical outlets or power cords that have exposed wiring</li> <li>● DO NOT block access to circuit breakers or fuse boxes</li> <li>● DO NOT tie power cords in knots. Knots can cause short circuits</li> <li>● DO NOT store flammable materials near electrical equipment/panels</li> <li>● DO NOT use nails or staples to secure an electrical cord to a wall or floor</li> <li>● DO NOT allow vehicles, carts, trolleys to pass over unprotected power cords</li> <li>● DO NOT plug several cords into an outlet</li> <li>● DO NOT bypass the switch on a power tool and operate it by connecting and disconnecting the power cord</li> <li>● DO NOT touch a person or electrical apparatus in the event of an electrical accident. Always disconnect the current first</li> </ul>
---	---

**Supervisor Responsibility**

- Supervisors are responsible to facilitate/or provide proper instruction to their workers on protection requirements and training
- Ensure that all electrical equipment meets Provincial Regulations and must meet be CSA approved
- Compliance & Enforcement

**Employee Responsibility**

- Do not use any unsafe or broken electrical equipment. Attach a warning tag, take it out-of-service and advise your supervisor
- Use a metal conduit or planks alongside power cords to protect them from being driven over with vehicles, carts, trolleys
- Do not use electrical tools in wet conditions
- Only use extension cords to **temporarily** supply power to an area that does not have a power outlet.

Table A

Minimum Distance	
Voltage	Distance
750 volts, up to 69,000 volts	3 Meters (10 ft.)
69,000 volts up to 138,000 volts	5 Meters (17 ft.)
138,000 volts and over	6 Meters (20 ft.)

\*\* All equipment must maintain the proper distances from power lines.

**Know the hazards of electricity. It will help prevent injuries or even death!**

---

**General**

Protect workers from injuries associated by not utilizing proper fall protection. Fall protection shall be utilized where there is or may be a danger to workers falling. NO person shall use fall protection devices until they have received adequate training.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Work at Heights</li> <li>● Work from Ladders</li> </ul>	<ul style="list-style-type: none"> <li>● Hidden openings</li> <li>● Slippery / Sloped Surfaces</li> </ul>	<ul style="list-style-type: none"> <li>● Wind Gusts</li> <li>● Elevated Work Platform</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● Fall Protection Plan</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice/Procedure</li> <li>● PPE/ Barricades / Warnings</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturer’s Recommendations</li> <li>● ERP (Emergency Response Plan)</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO read and understand the manufacturer’s instructions for all equipment to be used</li> <li>● DO ensure that only properly trained and familiarized personnel are authorized to operate equipment</li> <li>● DO choose the correct equipment to reach the work</li> <li>● DO inspect equipment before use</li> <li>● DO ensure that only qualified personnel inspect and maintain PPE equipment</li> <li>● DO immediately remove from service personal fall protection systems or components subjected to impact loading (e.g., involved in a fall)</li> <li>● DO use PPE equipment only for its intended use</li> <li>● DO ensure that the equipment guardrail system is properly installed and positioned, and access gate(s) and opening(s) closed per the manufacturer’s recommendations</li> <li>● DO operate the equipment safely to avoid the risk of ejection (e.g., drop-offs, being hit by other vehicles or objects)</li> <li>● DO assess each job site for potential fall hazards</li> <li>● DO ensure that each operator/occupant is wearing the correct size harness</li> </ul>	<p><b>Do not</b> <input type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT allow equipment contact with sharp edges. Ensure that all edges that PPE equipment may come in contact with are smooth, rounded or chamfered</li> <li>● DO NOT remove the guardrail or leave the gate open during use</li> <li>● DO NOT sit or climb on the edge of the basket or use planks, ladders or other devices for a work position</li> <li>● DO NOT connect to adjacent poles, structures or equipment while working from equipment</li> <li>● DO NOT use defective equipment or components</li> <li>● DO NOT attach two lanyards together to make them longer</li> </ul>
--	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● To facilitate and/or provide proper instruction to their workers on protection requirements and training</li> <li>● Hazard analysis</li> <li>● Work site inspection</li> <li>● Plan to “eliminate” or “prevent” the fall</li> </ul>
--

**Supervisor Responsibility (con't)**

- Determine type of equipment required
- Monitor performance and supervise the work to ensure the use, application and operation of the equipment is in conformance with all applicable standards, regulations and safety rules
- Direct and monitor the workers equipment to ensure that each person wears PPE equipment when required.

**Employee Responsibility**

- Be fully conversant with Fall Protection systems
- Ensure you know capabilities of fall protection equipment
- Ensure barricades, ribbons and signs identify restricted areas
- Ensure you understand the procedures for rescue of workers who may be unable to rescue themselves from an elevated work area
- Ensure you know your anchor points
- Ensure you do not wrap the lanyards and/or rope around beams, girders, pipes, etc.
- Utilise buddy system and continually check each other's harness and D ring to ensure that the harness is not too loose or the D ring has not slipped down the back
- Fall protection is required where workers are exposed to a potential fall of 3m (9.9 ft) or more.
- Equipment must be inspected before each use and defective equipment must be removed from service.

*How to determine total fall distance with a shock-absorbing lanyard.*

**General**

Static electrical charges are a dangerous source of ignition; capable of igniting a flammable mixture of petroleum vapours and air. This informs workers about the dangers of portable fuel containers such as jerry cans igniting when being filled or used. Remember STOP, DROP AND ROLL.

<b>Hazards Present</b>		
● Flash Fire / Explosion	● Eye / Skin Irritation	● Inhalation
<b>Protective Mechanisms</b>		
● Eye Protection	● Respiratory Protection	● Manufacturer’s Specifications
● Hand Protection	● WHMIS	● Training

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that portable fuel containers are being placed on the ground while they are being filled from fuel dispensers (contact with the earth allows any build-up of static electrical charges to dissipate and if accidental overflow occurs during the filling the risk of a fire is reduced)</li> <li>● DO keep the nozzle of the petrol dispenser in contact with the container at all times during the filling operation (this will maintain the electrical continuity and prevent a spark jumping across the gap between the nozzle and the container)</li> <li>● DO wear clothing to reduce static electricity and wear shoes with conductive soles</li> <li>● DO keep one hand on the container while filling to reduce the likelihood of static electricity build up and discharge</li> <li>● DO transport portable fuel containers secured, upright and away from heat sources, such as the sun, in a well ventilated space</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use a plastic funnel to fill a portable fuel container. The funnel will act as an insulator and promote the generation of static electrical charges</li> <li>● DO NOT get back into your vehicle after fuelling has started. If you do, new static buildup can cause a flash fire. (Make sure you touch metal prior to starting any fuelling procedures)</li> <li>● DO NOT mix even a small amount of gasoline with kerosene or diesel fuel</li> <li>● DO NOT smoke where gasoline is handled or stored</li> <li>● DO NOT leave your vehicle’s engine running when filling</li> </ul>
--	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● To facilitate and/or provide proper instruction to their workers on protection requirements and training</li> <li>● Hazard analysis</li> </ul>
---

<p><b>Employee Responsibility</b></p> <ul style="list-style-type: none"> <li>● Ensure you follow all safe work practices and procedures</li> </ul>

**General**

To ensure suitable controls are applied, perform an assessment of the lift and determine the lift method, equipment and number of people required which are critical to planning of the lift.

Hazards Present		
● Personnel Injury	● Damage to Property	● Crane Tipping Over
Protective Mechanisms		
● Hazard Assessment/Equipment Inspections	● Safe Work Practice/Procedure	● ERP (Emergency Response Plan)
● Training / PPE	● Crane Hand Signals	● SWP Hoisting Hand Signals

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure personnel shall have an escape route in case of an unexpected movement of the load or equipment</li> <li>● DO ensure that the load to be lifted shall be confirmed as within the rated capacity of the lifting equipment and attached by means of suitable lifting accessories</li> <li>● DO keep all people clear of overhead loads and areas of potential impact</li> <li>● DO make sure that load slings or other approved single attachments are properly sized and seated in the hook saddle</li> <li>● DO make sure that the load is free to move and will clear all obstructions</li> <li>● DO inspect all equipment regularly, replace damaged or worn parts, and keep appropriate records of inspections and maintenance</li> <li>● DO make sure the hook latches, if used, are closed and not supporting any part of the load</li> <li>● DO make sure that the load is free to move and will clear all obstructions</li> <li>● DO warn personnel of an approaching load</li> <li>● DO ensure you check load limits on all equipment, ensuring you have adequate load limit coverage</li> <li>● DO ensure the designated signaler is highly visible to the crane operator and view is not obstructed at any time</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT have the operator to move a load directly over people</li> <li>● DO NOT have the operator of the lifting appliance shall not leave the operating controls while the load is suspended</li> <li>● DO NOT have personnel undertake more than one task at a time, i.e. the signaller shall not handle loads and signal at the same time</li> <li>● DO NOT allow your attention to be diverted</li> <li>● DO NOT use hoist to lift, support, or transport people</li> <li>● DO NOT apply the load to the tip of the hook</li> <li>● DO NOT lift more than the rated load</li> <li>● DO NOT use twisted, kinked, damaged or worn rope or chain or cable</li> <li>● DO NOT use manual load handling to stop a swinging load (only to be performed below shoulder height)</li> <li>● DO NOT use load rope or load chain as a sling or wrap load rope or load chain around the load</li> <li>● DO NOT lift a load if any binding prevents equal loading on all supporting ropes, chains, cable</li> <li>● DO NOT lift a load unless wire rope is properly seated in its groove(s) or unless chain is properly seated in chain wheel(s) or sprocket(s)</li> </ul>
--	---

### Supervisor Responsibility

- Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training
- Designate one person in charge (PIC)
- Review hazards
- Hold a pre job meeting to ensure everybody understands their role
- All personnel shall understand their role and be competent to do it

### Employee Responsibility

- Ensure you are trained in hoisting & rigging
- Personnel shall not undertake more than one task at a time, i.e. the signaller shall not handle loads and signal at the same time
- Refer to SWP # 20 – Hoisting – Clips and Clamps
- Refer to SWP # 21 – Hoisting – Hand Signals
- Refer to SWP # 23 – Hoisting – Rigging
- Refer to SWP # 24 – Hoisting – Use of Shackles

**General**

A hoist is a device used to lift or move material. The lifting force is provided by a drum (or wheel) on which wraps a rope (wire or fibre) or a chain. There are different types of hoists – Electro-hydraulic, manual or lever operated, base mounted, or pendant cranes. These hoists are different in the way they move, but the precautions that should be taken when working with them are similar. Always follow the manufacturer’s recommendations for the hoist you are using.

Hazards Present		
● Personnel Injury	● Damage to Property	
Protective Mechanisms		
● Hazard Assessment	● Safe Work Practice/Procedure	● ERP (Emergency Response Plan)
● Training	● PPE	● Inspections

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO inspect the hoist before lifting a load</li> <li>● DO keep wire rope (cable) and chain lubricated</li> <li>● DO stand completely clear of the load</li> <li>● DO seat the load properly in the hook</li> <li>● DO move hoist controls smoothly. Remove slack from the sling and hoisting ropes before the load is lifted</li> <li>● DO ensure all loose materials, parts, blocking and packing have been removed from the load before starting the lift</li> <li>● DO make sure everyone is away from the load before starting to hoist</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use hoisting equipment for lifting people</li> <li>● DO NOT pass a load over any persons</li> <li>● DO NOT tip load. The load is unstable and harms the hook and hoist</li> <li>● DO NOT insert the point of the hook in a link of the chain</li> <li>● DO NOT hammer a sling into place</li> <li>● DO NOT leave slings dangling from the load hook. Place sling hooks on the sling ring when carrying slings to the load</li> <li>● DO NOT raise loads higher than necessary to clear objects</li> <li>● DO NOT exceed hoist load limit</li> </ul>
---	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training</li> <li>● Necessary equipment</li> </ul>
---

<p><b>Employee Responsibility</b></p> <ul style="list-style-type: none"> <li>● Signaller must be clearly visible to the operator</li> <li>● Inspect all equipment prior to each use</li> <li>● Know the safe load of the hoist. Do not exceed.</li> <li>● Refer to SWP # 19 – Hoisting – Cranes</li> <li>● Refer to SWP # 20 – Hoisting – Clips and Clamps</li> <li>● Refer to SWP # 21 – Hoisting – Hand Signals</li> <li>● Refer to SWP # 23 – Hoisting – Rigging</li> <li>● Refer to SWP # 24 – Hoisting – Use of Shackles</li> </ul>
--

**How should you use a materials hoist safely?**

- Know the safe load limit of the hoist. Do not exceed.
- Keep wire ropes and chains lubricated.
- Hoist from directly over the load. If not centered, the load may swing when lifted.
- Hang hoists solidly in the highest part of the hook area. Rigged this way, the hook support is directly in line with the hook shank
- Lever operated hoists can be used to pull in any direction, but a straight line pull must be maintained. Side pulling or lifting increases wear and sets up dangerous stress levels on hoist parts. Only one person should pull on hand, chain and lever hoists.
- When loading the lower hook, place the load directly in line with the hook shank. Loaded this way, the load chain makes a straight line from hook shank to hook shank.

Pushing a Chain Hoist is safer

Chain Hoist

If it must be pulled, use a rope

**General**

Good housekeeping is key in maintaining a safe, productive building project. It's important to maintain good housekeeping throughout all phases of construction. The area within and surrounding the construction site can be very hazardous to workers if debris is allowed to accumulate. Good housekeeping will reduce confusion on the project and will result in a safer, more efficient operation.

<b>Hazards Present</b>

--

**Angle and Extension**

- Set extension ladder at proper 75.5 degree angle by placing ladder base a distance equal to  $\frac{1}{4}$  total working length of ladder away from base of vertical support
- e.g. If the distance is less than 3 feet, place base of ladder a minimum of 3 feet from vertical support

- A Up to and including 32 ft – 3 ft overlap**
- B 36 ft – 4 ft overlap**
- C Over 36 ft and including 48 ft – 5 ft overlap**

---	---

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate/or provide proper instruction on PPE and training</li> <li>● Ensure inspection is done prior to use and document on Inspection Form</li> <li>● Ensure compliance and enforcement of safe work practices and job procedures</li> <li>● Shall ensure that powered mobile equipment is maintained in safe working condition</li> <li>● Have air and hydraulic lines, hoses and components maintained in safe operating condition</li> </ul>
---

**Supervisor Responsibility (con't)**

- Have equipment inspected visually and physically by a competent person on a weekly basis
- Have equipment lubricated only when at rest or as the manufacturer directs.
- Have defective parts repaired or replaced before being set in motion
- Ensure wire ropes, drums and sheaves are inspected visually on a daily basis by the operator
- Determine type of equipment required.
- Inspect work site

**Employee Responsibility**

- Operate the work platform safely and in accordance with the operating instructions and in compliance with applicable legislation.
- Ensure you have a valid operator’s training certification
- Ensure ground is firm and level.
- Carry out job site inspection and walk around inspection of platform
- Ensure the safe working load of the work platform is not exceeded
- Watch out for overhead and ground hazards, traffic and pedestrians
- Shall check for the effectiveness of all safety devices daily before operating the equipment.
- Erect warning devices.
- Wear a safety harness attached to the machine when operating any aerial platform.
- Get on and off the platform when it is in a lowered position.
- When leaving the equipment unattended, the operator shall park it on level ground, set the brake, lower the blades and bucket or safely block them, disengage the master clutch, stop the engine, and remove the key.

---

**Supervisor Responsibility (con't)**

- Have equipment lubricated only when at rest or as the manufacturer directs.
- Identify unsafe conditions and apply corrective measures
- Have defective parts repaired or replaced before being set in motion
- Ensure wire ropes, drums and sheaves are inspected visually on a daily basis by the operator

**Employee Responsibility (con't)**

- Ensure you are fully trained and certified to operate a lift truck
- Shall check for the effectiveness of all safety devices daily before operating the equipment.
- No part of the load must pass over any worker
- Handle all loads in accordance with the height and weight restrictions on the load chart
- If you do not have a clear view of the path, assistance from a signaller who has been instructed in a code of signals must be employed
- Make sure loads are secured
- Use barriers, warning signs or other safeguards where pedestrians are exposed to the risk of collision

**General**

In construction, a hard hat is a critical piece of personal protection. It is the last line of defence against objects impacting one of your most vital assets – your head. If your hard hat is not in good condition or used properly, the consequences could be tragic.

<b>Hazards Present</b>		
● Punctures / Burns	● Crushing / Cuts	● Cold / Heat
<b>Protective Mechanisms</b>		
● Manufacturers Recommendations	● PPE	● Safe Work Practices/Procedures

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure the head protection complies with CSA standards</li> <li>● DO maintain headwear according to the manufacturer’s instructions</li> <li>● DO use attachments ( earmuffs/face shields) that have been designed specifically for use with the specific headwear used</li> <li>● DO keep your hat clean and free of solvents, adhesives, grease and oil</li> <li>● DO wash with mild detergent and rinse thoroughly</li> <li>● DO remove from service any headgear if its serviceability is in doubt</li> <li>● DO replace headgear that has been subjected to a blow even though damage cannot be seen</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT leave your hard hat on the dashboard of a vehicle. The heat from the sun could compromise the strength of the hard hat</li> <li>● DO NOT drill, remove peaks, alter the shell or suspension in any way</li> <li>● DO NOT use solvents or paints on the shell. (makes shell “break down”)</li> <li>● DO NOT put chin straps over the brims of certain classes of headgear</li> <li>● DO NOT carry anything in the hard hat while wearing the hard hat</li> <li>● DO NOT apply metallic stickers as they may conduct radiant heat from the sun creating a “hot spot” which would weaken the plastic</li> <li>● DO NOT hide damage with stickers</li> </ul>
---	---

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training</li> <li>● Identify unsafe conditions and apply corrective measures</li> </ul>
--

<p><b>Employee Responsibility</b></p> <ul style="list-style-type: none"> <li>● Be conversant with emergency procedures</li> <li>● Follow safe work practice/procedures</li> <li>● Wear appropriate PPE</li> </ul>

**General**

Many workers are overexposed to noise, either from their own work or from ambient noise. In time, overexposure decreases our ability to hear. It is possible to slow down or stop noise-induced hearing loss by taking precautions.

Hazards Present		
<ul style="list-style-type: none"> <li>Hearing Loss</li> </ul>		
Protective Mechanisms		
<ul style="list-style-type: none"> <li>Manufacturers Recommendations</li> </ul>	<ul style="list-style-type: none"> <li>PPE</li> </ul>	<ul style="list-style-type: none"> <li>Safe Work Practices/Procedures</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO use earplugs or earmuffs in noisy environments</li> <li>DO make sure your earplugs or earmuffs fit comfortably</li> <li>DO clean reusable earplugs after each use</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO NOT reuse disposable earplugs</li> <li>DO NOT stand too close to noisy machinery for a long time</li> <li>DO NOT share earplugs with your co-workers</li> </ul>
---	--

**Overexposure**

It's important to know that overexposure to noise doesn't necessarily take a long time. Short periods of very high noise can cause overexposure. For example, working only 15 minutes with a gas-powered quick-cut saw will lead to overexposure for that day. Noise is generally measured in decibels (dB). The scale commonly used to measure noise that may harm human hearing is the A scale. Decibels on the A scale are therefore described as dBA.

You should wear hearing protection if you're exposed to noise levels such as:

- More than 85 dBA for 8 hours
- More than 88 dBA for 4 hours
- More than 91 dBA for 2 hours

Most power tools and equipment used in construction operate well over these levels. Some examples are:

• Brake Presses	86-93 dBA
• Hand-held Grinder	90-95 dBA
• Table Saw	87-94 dBA
• Hammer Drill	89-104 dBA
• Cutting Roof Deck	90-100 dBA
• Reciprocating Saw	86-105 dBA
• Drill	87-98 dBA
• Cordless Drill	98-100 dBA
• Skill Saw	98-105 dBA

**Supervisor Responsibility**

- Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training
- Identify unsafe conditions and apply corrective measures

**Employee Responsibility**

- Follow safe work practice/procedures
- Wear appropriate PPE

**General**

To protect you from breathing contaminated air, you may be required to wear a respirator. Examples of dangerous air contaminants are gases and vapors, dusts, fibres, mists, fumes, bacteria, spores, and pollen.

<b>Hazards Present</b>		
● Gases and Vapors	● Fumes	● Dust
<b>Protective Mechanisms</b>		
● Manufacturers Recommendations	● PPE	● Safe Work Practices/Procedures

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO check that you have the right respirator for the job</li> <li>● DO make sure you are instructed and trained on how to fit and wear it, clean, inspect, maintain and store it</li> <li>● DO fit test when you get it and at least once a year</li> <li>● DO seal check each time you put it on</li> <li>● DO change filters on a regular basis</li> <li>● DO report any respirator damage to your supervisor</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use if respirator is damaged</li> <li>● DO NOT use a disposable respirator if clogged or difficult to breathe through. Replace it</li> <li>● DO NOT allow a respirator to be worn before an evaluation is complete</li> <li>● DO NOT allow tight fitting face pieces to be worn by employees who have facial hair that comes between the sealing surface of the facepiece and the face</li> </ul>
---	--

**Types of Respirators**

**Air Purifying** purifies and filters the air drawn through them. They do not **supply** air or oxygen. They can only purify air in the surrounding atmosphere. If the oxygen content in the surrounding air is less than 19.5%, you cannot use the air purifying respirator. You will need a supplied air respirator.

**Supplies air Respirators** supplies air. The air comes from a cylinder or a compressor. They provide the best protection but have limitations. E.g. problems of weight, limited air supply and hoses can get tangled or snagged.

**Supervisor Responsibility**

- Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training
- Identify unsafe conditions and apply corrective measures

**Employee Responsibility**

- Wear your respirator when required and follow safe work practice/procedures
- Participate in the selection and fitting of your respirator

**General**

Protecting workers from injuries associated with the use of chainsaws.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Kickback</li> <li>● Dismemberment</li> </ul>	<ul style="list-style-type: none"> <li>● Burns</li> </ul>	<ul style="list-style-type: none"> <li>● Electrocutation</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Equipment Inspections</li> </ul>	<ul style="list-style-type: none"> <li>● PPE</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practices/Procedures</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO keep the cutting area clear of others</li> <li>● DO keep the chain clean, sharp and lubricated</li> <li>● DO cut while standing slightly to the side, out of the plane of the cutting chain</li> <li>● DO maintain a full throttle setting while cutting to maximize your productivity and to reduce fatigue for safer operation</li> <li>● DO bring the saw up to speed before starting cuts</li> <li>● DO keep both hands on the saw handles</li> <li>● DO let the saw come to a complete stop before reaching for the chain or blade</li> <li>● DO maintain a proper grip so that the saw does not slip or you lose control</li> <li>● DO use a cord rated for outdoor use when running an electric saw</li> <li>● DO always wait until the saw stops completely before setting the tool down</li> <li>● DO always stop the saw before leaving it</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT touch a hot muffler</li> <li>● DO NOT cut above chest height</li> <li>● DO NOT use the bar for leverage, it's there to guide and support the cutting chain</li> <li>● DO NOT push the saw. Let the saw do the work. If you find that you have to push, stop and sharpen the chain</li> <li>● DO NOT bury the tip in wood</li> <li>● DO NOT refuel a hot saw</li> <li>● DO NOT drop start the saw</li> <li>● DO NOT operate a saw when fatigued</li> <li>● DO NOT operate the saw if the chain breaks or any other safety feature of the tool is disabled</li> <li>● DO NOT leave the saw running unattended</li> <li>● DO NOT attempt to replace or sharpen the saw unless you are trained and competent to do so</li> </ul>
--	---

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate and/or provide appropriate training as necessary to their workers on the proper use of a chain saw</li> <li>● Monitor the use of chain saws by workers and ensure that all workers use safe work practices and that unsafe use of the tool is identified and corrected</li> <li>● Monitor the condition of the chain saws and take appropriate corrective action when the tool is defective</li> <li>● Ensure the chain saws are maintained according to the manufacturer's specifications</li> </ul>
--

<p><b>Employee Responsibility</b></p> <ul style="list-style-type: none"> <li>● Read and follow safe work practice</li> <li>● Do not wear any type of loose or dangling apparel and ensure that long hair is confined well away from the rotating parts of the tool</li> <li>● Clamp small or loose workpieces in some manner that will prevent them from moving during the cut</li> </ul>
---

**Binding** is caused when the material being cut clamps down and stalls the cutting chain inside the kerf (or cut). Be careful in the event the material closes in and pinches the saw. The push force, which is exerted when the top chain is pinched, can add unexpectedly to any pull force you may use when attempting to pull the saw free. You may pull the moving chain into yourself

**Kickback** occurs when the saw tip touches another object or the blade is pinched. The saw is thrown back towards the user. A saw cutting at full throttle can kick back in one tenth of one second – much faster than a person can react.

When cutting, hold the saw firmly with both hands, with thumbs and fingers encircling both chain saw handles. Grip the saw with the right hand on the rear (throttle) handle and the left hand on the front handle, even if you are left handed. A firm grip will help you maintain control of the saw in the event of a kickback or other unexpected reaction. Keep the chain saw handles dry, clean and free of oil or fuel mixture to avoid slipping and to aid in control of the saw.

Modern chainsaws are equipped with a variety of devices intended to reduce the risk of injury from kickback or from other causes. Among these are the chain brake, the front (left) hand guard, the bar tip guard and low or reduced kickback saw chain and guide bars. To assure the protection afforded by these devices is maintained, it is important your chainsaw is properly and fully assembled, and that all components are securely attached and functional.

**General**

There are various types of metal scaffolds and they all have a right and wrong way to be erected. The misuse of scaffolding is the cause of numerous serious injuries. Every worker who designs or constructs a scaffold should be competent and know what the manufacturer’s specifications are for the type of scaffold.

Hazards Present		
<ul style="list-style-type: none"> <li>● Lacerations on Hands</li> <li>● Back Strain</li> </ul>	<ul style="list-style-type: none"> <li>● Fall from Heights (Scaffold Failure)</li> <li>● Slips/Trips/Falls</li> </ul>	<ul style="list-style-type: none"> <li>● Property Damage (Scaffold Failure)</li> <li>● Falling objects</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● ERP (Emergency Response Plan)</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice/Procedure</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers recommendations</li> <li>● Proper Lifting Techniques</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO maintain a safe access to scaffolds and scaffold platforms</li> <li>● DO use ladders or stairways to reach platforms that are more than 2 feet above or below the access point</li> <li>● DO make sure a competent person inspects the components before each work shift</li> <li>● DO watch for electrical hazards, slippery platforms, and strong winds</li> <li>● DO have only trained and experienced workers erect suspension scaffolds</li> <li>● DO always wear appropriate fall protection</li> <li>● DO make sure platforms are guarded to keep workers and equipment from falling</li> <li>● DO keep the scaffold level, plumb, and square</li> <li>● DO inspect components, connections, planks, and structures regularly for hazards</li> <li>● DO use planking that is sound and meets OSHA requirements</li> <li>● DO when a scaffold might be struck by a swinging load, tag lines or equivalent means must be used to control the load</li> <li>● DO stay clear of power lines and any conductive material</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT climb cross-braces to reach a scaffold platform</li> <li>● DO NOT use damaged scaffold components. Repair or replace them immediately</li> <li>● DO NOT modify components</li> <li>● DO NOT mix components made by different manufacturers</li> <li>● DO NOT roll a scaffold by yourself while you are on it</li> <li>● DO NOT use damaged wire rope</li> <li>● DO NOT use wood outrigger systems</li> <li>● DO NOT drop anything from a scaffold</li> <li>● DO NOT use ladders for any reason on a standard scaffold platform</li> <li>● DO NOT use bricks, blocks, barrels, or other unstable objects to level a scaffold</li> <li>● DO NOT work on slippery platforms</li> <li>● DO NOT use a stage that is too long or too short for the job</li> <li>● DO NOT use makeshift methods to increase the working height of a scaffold platform</li> </ul>
--	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>● Supervisors are responsible to facilitate and/or provide proper instruction to their workers on protection requirements and training</li> <li>● Work site inspection</li> <li>● Selection of equipment</li> </ul>
--

**Employee Responsibility**

- Ensure load limits for scaffold is not exceeded
- Make sure that scaffolds are inspected before use and that they are not used if defects are found
- Make sure the scaffold you intend to use is the correct one for the job

**General**

Protecting workers from possible injuries associated with heat exposure. Workers must be aware of dangers associated with working in extreme weather.

Hazards Present		
• Heat Stroke/Cramps	• Sunburn	• Organ Damage/Death
Protective Mechanisms		
• PPE	• Safe Work Practice	• First Aid/CPR

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO drink frequently; one cup per hour of cool water, fruit juice, or tea. A drink with sugar should be given once per shift</li> <li>• DO eat properly to replace the salt lost through perspiration</li> <li>• DO wear lightweight and light colored clothing. Make sure that you wear the proper protective equipment</li> <li>• DO wear sunglasses and sunscreen to block out the sun</li> <li>• DO take regular breaks in a shaded cooler place and shower after each shift</li> <li>• DO gradually acclimatize yourself to the heat, by increasing your exposure over a period of four to seven days</li> <li>• DO avoid exposure to the sun if you have previously suffered from heat stroke you will have increased sensitivity</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT drink alcohol, coffee, or other carbonated drinks with caffeine</li> <li>• DO NOT overexert yourself</li> <li>• DO NOT rely on fans to cool people, unless there is adequate ventilation</li> </ul>
---	--

<p><b>Supervisor Responsibility</b></p> <ul style="list-style-type: none"> <li>• Instruct workers in health and safety procedures appropriate to the tasks and environment in which they are to be performed.</li> </ul>
--

<p><b>Employee Responsibility</b></p> <ul style="list-style-type: none"> <li>• Employees shall follow the requirements of this practice and notify their supervisor of any possible exposure concerns or issues</li> </ul>
--

<ul style="list-style-type: none"> <li>• <b>Heat Rash</b> – Red, itchy rash, tingling skin – treat with cool showers, always drying skin and use calamine lotion. Prevent by wearing light cotton clothes and shower often</li> <li>• <b>Heat Cramps</b> – Spasms of the muscles that do the hardest work – drink a glass of water with half a teaspoon of salt, and massage the muscle. Prevent it by warming up the muscles before performing heavy work and adding salt to food. Take several rest periods</li> <li>• <b>Fainting</b> – Lie down in a cool place. Prevent by not standing in one place for a long time, stretching often and drinking lots of fluids</li> <li>• <b>Heat Exhaustion</b> – Tired, weak, dizzy, slow pulse – must lie down with knees raised and drink cool fluids. Prevent with sufficient fluids and resting in cool places</li> <li>• <b>Heat Stroke</b> – Hot, dry skin, confused mind, and a high temperature. It can be fatal if treatment is delayed. Get the person to hospital immediately, cooling them on the way. Prevent by acclimatizing for four to seven days, resting in cool places, providing sufficient hydration and wearing suitable clothing</li> </ul>

**General**

Ensuring that property is protected once hot work has been completed. A fire watch must be conducted for 2 hours upon completion of torching.

Hazards Present		
<ul style="list-style-type: none"> <li>● Property Damage</li> </ul>	<ul style="list-style-type: none"> <li>● Personal Injury</li> </ul>	<ul style="list-style-type: none"> <li>● Loss of Product</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● FLIR Camera</li> <li>● Local, Regional &amp; Federal Regulations</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● Heat Gun</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO check hot work area for 2 hours post torching</li> <li>● DO ensure you have fire extinguisher on roof area</li> <li>● DO use available heat detection devices</li> <li>● DO check all areas every 15 minutes</li> <li>● DO ensure that fire extinguishers are charged and up to date with inspections</li> <li>● DO call 911 when necessary for fire extinguishing</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT leave area without completing fire watch</li> <li>● DO NOT use hand to detect possible hot spots</li> <li>● DO NOT leave any combustible materials on the roof area</li> <li>● DO NOT attempt to put out a large fire on your own</li> </ul>
--	---

**Fire Watch Required For 2 Hours Post Torch Completion**

When is a fire watch required?

- A fire watch is required whenever open flame/hot work is performed in a location where a fire might develop or where any of the following conditions exist:
  - Combustible materials on the roof or in the building construction which pose a risk of igniting during torch operations. A pre-work hazard assessment shall include checking the roof and building components for combustible materials and hidden fire hazards.
  - Combustible materials that are more than 15’ (4.6m) away but are easily ignited by sparks (dust, fibers, fumes)
  - Wall or roof opening within 15’ (4.6m) radius which expose combustible materials in adjacent areas, including concealed spaces or walls or floors
  - Combustible materials that are adjacent to the opposite side of partitions, walls, or roof surfaces and are likely to be ignited
- Atlantic Roofers/North Shore Roofing Ltd. Foreman has the discretion to require a constant fire watch when they feel the circumstances justify having an additional person present. The fire watch shall consist of at least one qualified person

**Remember – the Fire Watch Qualified Person must:**

- Be trained in the use of fire extinguishers and fire watch procedures including the correct operation of the infrared heat sensor (heat gun or FLIR camera) and completion of the Fire Watch Record form
- Remain present and undistracted during Fire Watch
- Be alert for any condition that could lead to a fire
- Ensure appropriate fire fighting equipment is nearby and accessible
- If work is in progress during the fire watch period interrupt the work when a hazardous condition develops, and deal with the situation appropriately
- Know how to initiate fire emergency procedures, including extinguishing and evacuation of all workers from the Hazard area and notifying all other persons that could potentially be affected, notifying local Fire Department(s), and Atlantic Roofers / North Shore Emergency Contact personnel
- Remain on the scene for at least two (2) hours after completion of hot work to detect, extinguish, and/or report a fire resulting from stored heat. (Confirm fire watch requirements in job specification. The most stringent application shall apply to the fire watch period)

**Fire Watch Checklist**

- Check torching equipment, including propane tanks to ensure they are properly all shut off, disconnected and stored properly (make corrections as necessary)
- Check for hot spots around fans and units which may have been turned back on (work in conjunction with building occupants/owner)
- Check for hot spots at penetrations, roof junctions, and control joints.
- Be alert to any unusual odors
- Check for fire at any breaks or openings in the structure.

**General**

The implementation and maintenance of a safe work environment is the collective responsibility of all employees, contractors, and visitors to the jobsite. It is our company policy to provide prompt medical treatment when a worker is injured on the jobsite. To do this, workers may have to perform a working at heights rescue to bring down a worker who has fallen and is suspended in a safety harness.

This procedure applies to all managers, supervisors, forepersons, employees, subcontractors, and visitors of every jobsite.

<b>Hazards Present</b>		
● Physical	● Working from Heights

--

### **Purpose of Working at Heights Rescues**

When a worker falls, and is suspended in a harness, it's important to rescue him or her as quickly as possible because of the following reasons.

- The worker may have suffered injuries during the fall and may need medical attention.
- When workers are suspended in their safety harnesses for long periods, they may suffer from blood pooling in the lower body. This can lead to suspension trauma.
- Suspended workers may panic if they are not rescued quickly.
- The event that led to the fall may create additional risks that need to be addressed.

### **The three main parts of emergency planning are:**

1. Training
2. Creating an emergency plan
3. Outlining rescue procedures.

### **1. Training**

All site personnel must attend a site-specific safety training session where they will review emergency response procedures and receive instruction on alarms and assembly areas.

Train a designated crew to perform the rescue. This crew must know how to use the equipment that is available to them at the jobsite and where they can find it. They should review the rescue procedure every two weeks with the crane crews.

### **2. Emergency Response Plan**

If a worker falls and is suspended by a safety harness, implement the emergency response plan by following the steps below.

*Note:* It's important to know your role.

1. The site supervisor (or alternate foreperson) takes control of the situation.
2. The site supervisor sounds the emergency alarm—two long blasts from a horn. All workers in the immediate vicinity of the incident stop working. The site supervisor quickly evaluates the situation and identifies any further hazards that could arise.
3. The site supervisor or their designate goes to get help if workers are close by. If no one is close enough, the site supervisor calls for help.
4. The site supervisor calls 911 to notify local police, fire, and ambulance if required.
5. The crane operator remains on standby. The operator frees the hook and waits for further direction in case the designated rescue team must perform a basket rescue.
6. The site supervisor (or a worker assigned to the task) isolates the accident zone and its perimeter to limit further exposure.
7. The site supervisor (or a worker assigned to the task) moves all non-affected personnel to a safe zone or directs them to remain where they are.
8. The site supervisor enables radio silence on the jobsite, except for crisis communications from emergency responders. These communications are conducted on a pre-selected "emergency only" radio channel.
9. The site supervisor sends a designated worker to the site gate to meet the response team (police, medical, fire, etc.) and ensure that they have a safe access path to the accident scene.
10. The site supervisor assembles the emergency rescue team at the accident site as quickly as possible to determine the best rescue procedure for the situation.

## 1. Rescue Procedures

The following rescue procedures are ordered (A) through (D), with (A) being the preferred method and (D) being the method used when there is no other means of rescue.

- A. **Elevating Work Platform Rescue** - If an elevating work platform (EWP) is available on site and the suspended worker can be reached by the platform, follow the procedure below.
1. Bring the EWP to the accident site and use it to reach the suspended worker.
  2. Ensure that rescue workers are wearing full-body harnesses attached to appropriate anchors in the EWP.
  3. Ensure that the EWP has the load capacity for both the rescuer(s) and the fallen worker. If the fallen worker is not conscious, two rescuers will probably be needed to safely handle the weight of the fallen worker.
  4. Position the EWP platform below the worker and disconnect the worker's lanyard when it is safe to do so. When the worker is safely on the EWP, reattach the lanyard to an appropriate anchor point on the EWP if possible.
  5. Lower the worker to a safe location and administer first aid. Treat the worker for suspension trauma and any other injury.
  6. Arrange transportation to hospital if required.
- B. **Ladder Rescue** - If an elevating work platform is not available, use ladders to rescue the fallen worker with the procedure outlined below.
1. If the fallen worker is suspended from a lifeline, move the worker (if possible) to an area that rescuers can access safely with a ladder.
  2. Set up the appropriate ladder(s) to reach the fallen worker.
  3. Rig separate lifelines for rescuers to use while carrying out the rescue from the ladder(s).
  4. If the fallen worker is not conscious or cannot reliably help with the rescue, at least two rescuers may be needed.
  5. If the fallen worker is suspended directly from a lanyard or a lifeline, securely attach a separate lowering line to the harness.
  6. Other rescuers on the ground (or closest work surface) should lower the fallen worker while the rescuer on the ladder guides the fallen worker to the ground (or work surface).
  7. Once the fallen worker has been brought to a safe location, administer first aid and treat the person for suspension trauma and any other injury.
  8. Arrange transportation to hospital if required.
- C. **Basket Rescue** - If a worker has fallen and is suspended in an inaccessible area, you may need to perform a basket rescue.

For basket rescues, the basket must be designed by a professional engineer in accordance with good manufacturing processes to withstand all loads to which it may be subjected. It must be kept on site at all times in an accessible location where it is clear of material or other equipment. Fit the rescue basket with appropriate rigging for quick hookup by the crane operator.

**Always keep the following items in the rescue basket.**

1. First-aid kit
2. Three lanyards equipped with shock absorbers
3. One full-body harness
4. Tag line attached to the basket at all times
5. Descent controller rescue device in good working condition
6. Secondary safety line to tie the basket above the headache ball of the crane.

**Basket Rescue** (cont.)

**To perform a basket rescue, follow the steps below.**

1. Make sure preferred methods A, B, and C are not possible.
2. Notify the crane operator right away to position the crane to attach the basket.
3. While the basket is being attached, the crew leader checks that all safety rigging is done and all the required safety equipment is available.
4. With two rescuers in the basket, hoist it to a position that is above and as close as possible to the fallen worker. A designated worker on the ground guides the basket with a tag line. The designated worker must make sure that when the rescue basket reaches the right elevation, the door of the basket is facing the structural steel to provide an easy exit for rescuer #1.
5. Rescuer #1 exits the rescue basket and gets into a position to reach the fallen worker. When doing this, rescuer #1 must be tied-off at all times to either the structure or the rescue basket.
6. Rescuer #2, who is still in the rescue basket, lowers the line that will be used to retrieve the worker. Rescuer #2 attaches an extra lanyard to the line if required.
7. Rescuer #1 assesses the fallen worker for injuries and then decides how to proceed (i.e., treat injuries first, guide the fallen worker into the rescue basket, or lower the basket to the ground with the fallen worker attached to it).
8. Once the fallen worker has been brought to a safe location, administer first aid. Treat the person for suspension trauma and any other injury.
9. Arrange transportation to hospital. A designated worker must accompany the injured worker to hospital.

**If the basket rescue is the method used, keep the following points in mind.**

1. Perform a basket rescue only when it is not possible to use conventional equipment to rescue the fallen worker in a safe manner.
2. Never exceed the maximum number of workers in the basket as indicated on the nameplate.
3. Ensure that a competent worker inspects the crane and equipment being used prior to lifting rescuers.
4. Always equip the crane with a fail-safe mechanism to prevent the boom from descending in the event of a power source or system failure.
5. Maintain an adequate means of communication between the rescuers in the basket and the crane operator at all times.
6. Ensure that workers in the rescue basket wear full-body safety harnesses attached to a lanyard and anchored to appropriate points in the basket at all times.
7. Make sure that all rigging used to attach the rescue basket to the hook of a load line has a safety factor of 10 against failure. There should be a safety line attached to the load line directly from the basket.
8. Do not allow cranes to travel while rescuers are in the basket.
9. Do not use suspended rescue baskets during high winds, electrical storms, snow, ice, sleet, or other adverse conditions that could affect the safety of personnel on the platform or in the basket.

**Basket Rescue** (cont.)

**Post-Rescue Procedure**

All non-affected workers should remain in the designated safe gathering zone until the site supervisor notifies them to do otherwise.

The site supervisor and health and safety representative should

1. Begin the accident investigation.
2. Quarantine all fall-arrest equipment that may have been subjected to fall fatigue effects and/or shock loading for further investigation.
3. Secure the area (the OHSA requires that an accident scene not be disturbed where a fatal or critical injury has occurred).
4. Determine whether or not the jobsite-specific rescue and evacuation plans were followed as designed.
5. Record modifications or additions to the plans that the rescue team deems necessary.
6. Record all documented communications with fire, police, WorkSafe (Provincial OHS), and other contractors involved.
7. Record all documented statements from employees, witnesses, and others.
8. Save all photographs of the incident.
9. Record all key information such as dates, time, weather, general site conditions, and specific accident locales including sketches of the immediate incident area, complete with measurements if applicable.

The information contained in this publication is intended for general use and may not apply to every circumstance. # Safe Job Procedures

---

## Section 4

# Job Procedure Definition

---

## Section 4.1

## **4.1 Job Procedure Definition**

“Safe Job Procedures” are a control. They provide a step-by-step instruction on how to perform high risk tasks safely. The Occupational Safety General Regulations require task procedures for certain jobs if they are applicable to your operation, i.e.: Lock Out, Confined Space Entry, Fuelling Equipment with Internal Combustion Engine, etc.

The following pages contain safe job procedures that were developed to address specific company work activities, tools and equipment.

# Job Procedures

---

## Section 4.2

## Job Procedure Index

JP #	Job Procedure Name
JP #1	Cleaning with Solvents
JP #2	Dump Chute – Set-up and Use
JP #3	Dump Chute – Cart Use (Power Buggy)
JP #4	Equipment – Blower Use
JP #5	Equipment – Chain Saw Use
JP #6	Equipment – Cut-off Saw Use
JP #7	Equipment – Cutting Machine (Single Blade)
JP #8	Equipment – Powered Gravel Spreader
JP #9	Equipment – RhinoBond Tool Use
JP #10	Equipment – Ripping Machine Use (Roof Remover)
JP #11	Equipment – Sweeper Use
JP #12	Fall Protection – Code of Practice
JP #13	Fall Protection – Fall Arrest System Use
JP #14	Fall Protection – Free Standing Counter Weight Anchor
JP #15	Fall Protection – Pre-Engineered Horizontal Lifeline Use
JP #16	Fall Protection – Railguard 200 Installation
JP #17	Fall Protection – Railguard 200 Use for Travel Restraint
JP #18	Fall Protection – PR-2000 Roofing Platform
JP #19	Fall Protection – PR-600 Mobile Fall Protection System
JP #20	Fall Protection – Safety Monitor / Control Zone Use (NB)
JP #21	Fall Protection – Vertical Lifeline Use
JP #22	Flammable Liquids – Filling / Handling Portable Fuel Containers
JP #23	Flammable Liquids – Propane Handling
JP #24	Hazard Assessment – How To
JP #25	Hoisting – Hand Hoist Set-up and Use
JP #26	Hoisting – Power Hoist Set-up and Use
JP #27	Hoisting – Power Ladder Set-up and Use
JP #28	Hoisting – Rigging
JP #29	Ladders – Extension Ladder Set-up and Use
JP #30	Lock-out / Tag-out
JP #31	Manual Lifting
JP #32	Metal – Fabrication Use Brake
JP #33	Metal – Installing Flashings
JP #34	Mobile Equipment – Boom Lift Operation
JP #35	Mobile Equipment – Forklift Operation
JP #36	Mobile Equipment – Refueling
JP #37	Mobile Equipment – Scissor Lift Operation
JP #38	Planned Inspections
JP #39	Rescue – DBI Rollgliss Rescue Kit for Fallen Worker
JP #40	Respirator – Code of Practice
JP #41	Roof – Cutting Operations
JP #42	Roof – Fiberboard Installation
JP #43	Roof – Insulation and Ballast Installation
	Roof – Loading Pallets of Material on Roof
	See Section 2 – Form P-02-1 Roof Loading Assessment
JP #44	Roof – Mopping Tar

JP #45	Roof – Removal and Disposal
JP #46	Roof – Peel and Stick Installation
JP #47	Roof – Hole and Skylight Protection
JP #48	Roof – Torching
JP #49	Roofing Kettle – Set-up of Supply Line
JP #50	Roofing Kettle – Set-up / Use / Shut Down
JP #51	Roofing Kettle – Transfer of Hot Stuff
JP #52	Scaffolds – Metal
JP #53	Working Alone Code of Practice
JP #54	Fall Protection – Safety Monitor / Control Zone (NL)
JP #55	Fall Protection – Rescue Procedures
JP #56	Equipment – Mini Macaden 1000
JP #57	Flammable Liquids – Propane Tank Silicone Rubber Band Heater
JP #58	Fall Protection – Miller Edge Fall Protection System
JP #59	PPE – Adjusting Fall Protection Harness

**General**

Solvents are among the most commonly used chemicals in workplaces. Workers in different jobs regularly use solvents for degreasing, metal cleaning, and adhesion and as paint thinners or lubricants.

Hazards Present		
<ul style="list-style-type: none"> <li>● Inhalation of Fumes</li> <li>● Ingestion</li> </ul>	<ul style="list-style-type: none"> <li>● Skin Absorption</li> </ul>	<ul style="list-style-type: none"> <li>● Chemical Burns</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Protective (rubber) Gloves</li> <li>● Respiratory Protection</li> </ul>	<ul style="list-style-type: none"> <li>● Protective Clothing/Footwear</li> <li>● Manufacturers Recommendations</li> </ul>	<ul style="list-style-type: none"> <li>● Safety Face Shield/Goggles</li> <li>● SDS/WHMIS Training</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>● Special container for soiled rags</li> </ul>	<ul style="list-style-type: none"> <li>● Hand soap/cleaner</li> </ul>	<ul style="list-style-type: none"> <li>● PPE</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO check toxic hazards of all solvents before use (SDS)</li> <li>● DO make sure containers have suitable WHMIS labels</li> <li>● DO store flammable solvents in special storage containers</li> <li>● DO use non-flammable solvents for general cleaning</li> <li>● DO store flammable solvents in special storage areas</li> <li>● DO read Safety Data Sheet (SDS) of all solvents before use</li> <li>● DO provide adequate ventilation where all solvents and flammables are being used</li> <li>● DO use goggles or face shield to protect face and eyes from splashes or sprays</li> <li>● DO use rubber gloves to protect the hands</li> <li>● DO wear protective clothing to prevent contamination of workers' clothes</li> <li>● DO use the appropriate respiratory protection when breathing hazards exist</li> <li>● DO ensure that proper containers are used for transportation, storage and field use of solvents/flammables</li> <li>● DO ensure all WHMIS requirements are met</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use solvents in areas where food may be contaminated</li> <li>● DO NOT smoke when using or near solvents</li> <li>● DO NOT use solvents near open flame or heat</li> <li>● DO NOT permit hot work in the area when flammable liquids are used</li> <li>● DO NOT leave solvents in open tubs or vats. Return them to storage drums or tanks</li> </ul> <div style="text-align: center; margin-top: 20px;">  </div>
--	--

**Procedure**

1. Inspect work area to make sure that no hot work is being done in the area
2. Put on all required Personal Protective Equipment (PPE).
3. Spot test a non-visible area by putting a small amount of cleaning solvent on a clean rag. Apply dampened rag to a non-visible area to ensure that the cleaning solvent doesn't discolor or otherwise damage the material.
4. If solvent causes any damage or discoloration, stop immediately and advise supervisor
5. If cleaning solvent does not cause any damage or discoloration, then continue to clean appropriate areas as outlined by supervisor
6. When finished with cleaning solvent, it must be stored away in the proper container and appropriate location. This must be done before going on a break, a meal or at the end of the shift
7. Ensure you wash thoroughly after putting away goggles, clothing, and gloves to prevent any solvent from being accidentally rubbed on skin or in eyes

Do Not Splash

Pour With Care

Read and Follow the Label

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Protecting employees and general public from injuries associated with the use of Dump Chutes. Although these chutes make the work space safer, they still require some extra considerations and proper installation to keep everyone safe when working around them.

Hazards Present		
<ul style="list-style-type: none"> <li>● Inhalation of Harmful Substances</li> <li>● Slips/Trips</li> </ul>	<ul style="list-style-type: none"> <li>● Fall from Height</li> <li>● Strains/Sprains</li> </ul>	<ul style="list-style-type: none"> <li>● Falling Objects</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Fall Protection</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Rigging</li> <li>● Manufacturers</li> </ul>	<ul style="list-style-type: none"> <li>● WHMIS Training</li> <li>● Barricades/Danger tape</li> </ul>
Recommendations		
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>● Dump Chute (Specific to Job)</li> <li>● Container/Dumpster/Trailer</li> </ul>	<ul style="list-style-type: none"> <li>● Adjustable/Open end Wrench</li> <li>● Barricades</li> </ul>	<ul style="list-style-type: none"> <li>● Outrigger Sections and Counterweights (as required)</li> <li>● Caution/Danger Tape</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure this equipment is used by a competent person who has read and understood the job procedure</li> <li>● DO wear sensible, protective clothing and footwear offering good grip, plus work gloves and a hard hat</li> <li>● DO tie back long hair and avoid loose garments and jewelry that could get in your way</li> <li>● DO wear suitable respiratory protection when working with harmful substances</li> <li>● DO where practicable, the skip should be fitted with a suitable cover (tarp) to keep dust pollution to a minimum</li> <li>● DO use barricades to cordon off the area under the chute</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use this equipment if you suffer from a temporary or permanent disability. It's designed to be used by an able-bodied adult</li> <li>● DO NOT use this equipment if you are ill, feeling tired or under the influence of alcohol or drugs</li> <li>● DO NOT work directly under the chute</li> </ul>
--	---

**This equipment is designed to be suspended from a secure anchorage point and it is the Workers' responsibility to ensure all necessary precautions have been taken to safeguard any member of the public or any person using the chutes from harm.**

**Procedure for "VERTICAL" use**

1. **Conduct a pre-starting inspection of equipment and work area**
  - a. Double check the equipment's general condition before the start of each work day
  - b. Pay special attention to all retaining clips and bolts. If it shows signs of excessive wear or damage, don't use it. Notify Supervisor so damages/wear & tear can be rectified/replaced
  - c. Make sure you have everything you need on hand, including a team of able bodied workers consisting of an assembler and one or two helpers to pass up components

**Procedure for “VERTICAL” use (con’t)**

**2. Assemble chute sections at ground level (including Dump opening)**

- a. Remember to always consult the manufacturer's instructions
- b. Working on the ground, slide the mouth of each section over the end of the next
- c. Depending on model, either
  - i. fasten its two safety clips to the latter's U-bolts, or
  - ii. loop the chain end through the anchorage plate on the side of the chute
- d. Install barricades or run a line of caution/danger tape to define the dumping area

**3. Lift Outriggers and Counterweights to the roof level**

- a. Where applicable, outriggers and counterweights may be used to secure the chute. Set-up is specific to the site and should be determined during the initial site assessment
- b. Follow appropriate hoisting procedures to lift outrigger arms and weights to the roof area
- c. Make sure you use a signaler when hoisting
- d. Signalers and installers on the roof must use the correct fall protection system

**4. Lift Chute Sections**

- a. Having joined no more than EIGHT sections, tie a rope to the U-bolts/anchorage plate of the section that will form the top of the chute (dump opening/hopper section will be at the top)
- b. Hoist into its working position in a vertical manner. Use appropriate hoisting procedures

**5. Secure Chute**

- a. Secure the top of the chute at toe board height – 150mm (6 inches) above the working platform – to a suitable fixing point with a wire strap and clip or chain the end plate from the top section. Ensure the fixing point is capable of withstanding the loads to be placed upon it
- b. Secure vertical chute along its length every 6 meters (20 feet) by tying to secured scaffolding or other rigid structure
- c. Finally, if you have the hopper as a separate piece, simply drop into the upper chute section. It does not normally need to be secured in any other way. The hopper must be covered when not in use
- d. The hopper is designed to allow waste to be tipped into the chute from a wheelbarrow, however, guardrails must be installed on each open side of the hopper to prevent any debris that may accidentally miss the hopper falling directly to the ground

**6. Dumping materials**

- a. Ensure the discharge end of the chute is placed into a closed container or an area that is not accessible to the public. See correct procedures for Dump Cart
- b. The exit point into the skip (Dump Cart) should be moved at regular intervals from one side of the skip to the other. This will spread the waste evenly across the skip and prevent a blockage in the final section
- c. Redistribute its contents from time to time to stop the end of the chute becoming blocked
- d. If climbing into a container use proper hand/foot holds, maintain 3 point contact. Use caution when walking in container
- e. Do not enter the area unless the chute is blocked off or a spotter on the roof is employed to relay communications between roof and ground workers
- f. Wear all applicable PPE including dust masks
- g. Use proper body Mechanics when lifting & carrying to prevent injury.

**Procedure for “VERTICAL” use (con’t)**

**7. If a Blockage Occurs**

- a. Stop putting debris into the chute
- b. Evacuate the area below the chute of people. Consider that the path of destruction created by a collapsing chute could be equivalent to its height
- c. Use a crane or hoist with ample capacity to lower the entire chute to the ground
- d. Separate the chute sections on the ground
- e. Remove the blockage
- f. Consult the manufacturer to determine if the anchors and cable assemblies were strained. If yes, order new cable assemblies or rig new anchors. If they were not strained, reinstall the chute system

**8. Installing a Ramp to Access Hopper with a Wheelbarrow**

- a. All ramps shall be constructed, braced and supported to resist lateral displacement and all vertical loads, including impact and shall not be more than 8 feet in length (8 feet will allow 50 psf)
- b. All lumber shall be at least equal in strength to construction grade lumber
- c. Measure the distance from the top of the parapet to the roof surface. For every one inch of height you will need at least 4 inches of length (eg; vertical distance of 2 feet, ramp will be 8 feet long)
- d. The ramp width will be at least 3 feet in clear width and will consist of 2 inch planking, laid close, buttjoined and securely fastened
- e. Ramp shall be provided with a guardrail and toeboard on open sides
- f. Top rail shall be a 2 inch by 4 inch wood top rail and not less than 3 feet and not more than 3 feet 6 inches above the ramp floor. Mid rail shall be 1 inch by 4 inch wood located midway between the top rail and ramp floor. Both rails shall be supported by 2 inch by 4 inch wood posts spaced not more than 8 feet apart
- g. Toeboard shall be at least 5 ½ inches high and be constructed of metal, wood or other substantial material and be installed along the edge of the ramp. It shall be securely fastened to the posts and installed so there is no open space between the ramp floor and the toeboard

**Procedure for “NON-VERTICAL” use**

**9. In general, rubbish chutes are best set up as near vertical as possible. However, if necessary they can be angled downward in order to discharge into a skip some way from the foot of the scaffolding or building.**

- a. Construct the chute as described in steps 1 to 5
- b. Make sure the top of the chute is securely fastened before pulling bottom tight
- c. Secure the bottom end to the skip with a rope fed through the U-Bolts or anchorage plates of the lowest section and tied off on the skip’s lugs
- d. Before tying off, though, pull the rope as taught as possible to stop the chute sagging
- e. If you cannot stop it sagging more than a small amount, then you must shorten it and move the skip to suit
- f. If the chute sags, it will certainly clog with rubbish and could break in two

**Finishing Off**

**10. Finishing Off**

- a. To dismantle the chute, merely reverse the erection procedure explained in Steps 1 to 5
- b. Note, however, that if the chute has been set up at an angle to span some obstacle and is to be out of action for only a short period (say, overnight) there is no need to take it down completely

**Finishing Off (con't)**

- c. Instead, merely dismantle the lower sections, so the chute can be swung back and tied off vertically against the side of the scaffold or building. Then block off all hoppers fitted to prevent its use
- d. It is rarely necessary to dismantle the chute in order to direct it into a different skip. Simply untie the ropes holding the sections in place and swing it over into the new position – you'll find the chute is really quite flexible
- e. Similarly, the top end can just be swung into the new position if you wish to relocate the hopper

**11. Equipment Care**

- a. Never push the equipment beyond its design limits. If it will not do what you want with reasonable ease, assume you have the wrong tool for the job. Ask for assistance
- b. Keep the chute clean. You will find this less of a chore if you hose it down regularly rather than wait until the end of the hire period
- c. When not in use, store the chute sections somewhere safe from thieves; keeping them upright at all times to prevent deformation
- d. Remember that the chute is designed to transport ordinary building site rubbish. It is not designed to cope with liquid or semi liquid waste, corrosive, flammable, hot or hazardous materials
- e. The chute is not designed to cope with large, long, heavy objects. These will almost certainly block up the chute, and could actually break out through it, causing serious damage or personal injury

Trash Hopper Counterweight System

Window/Parapet Outrigger

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

Sweep smaller debris into piles and shovel into cart</li> <li>● DO wear boots with good traction, safety eyewear and dust mask if required</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT leave motorized equipment running while unattended</li> <li>● DO NOT use this equipment if you are ill, feeling tired or under the influence of alcohol or drugs</li> <li>● DO NOT store fuel on or close to a hot engine</li> <li>● DO NOT smoke in refueling areas</li> <li>● DO NOT wear loose clothing, jewelry or objects that may become entangled in moving parts</li> <li>● DO NOT overload the cart</li> </ul>
---	--

<b>Procedure</b>	
<ol style="list-style-type: none"> <li><b>1. Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>Double check the equipment’s general condition before the start of each work day</li> <li>Make sure you read and understand the manufacturer’s instructions and job procedures</li> <li>Check the gas &amp; oil levels and refill as necessary. Always clean up spills immediately</li> </ol> </li> <li><b>2. Check Load Limits and Capacities</b> <ol style="list-style-type: none"> <li>Check roof load limits and capacities with builder, owner, architect or on site engineer</li> </ol> </li> </ol>	
Loaded Weights(Approximate)	
<b>Combination</b>	<b>Weight</b>
Power Unit with Dump Hopper or Forks	525 lbs plus load Capacities
<b>Combination</b>	<b>Capacity</b>
Dump Hopper or Forks	1000 lbs
* Check with your material sources for the actual weight of the material that you are using.	

**Procedure (con't)**

**3. Hoist the Machine to the Roof**

- a. Inspect the hoist
- b. Make sure everyone on the ground is completely clear of the hoisting area
- c. Consult your “Hoisting” Job Procedure for complete hoisting procedures
- d. Connect hooks from the hoist line to rings provided on side of Cart Hoist using these rings only
- e. Approximate Machine & Attachment Weights

Power Unit	340 lbs	55Gal Insulated Tank	75 lbs
Dump Bucket (Standard)	60 lbs	Rods & Channels for tank	25 lbs
Dump Bucket (Large)	120 lbs	Material Forks	55 lbs
Gravel Spreader	150 lbs		

**4. Start Motor**

- a. Remove any objects that could injure hands or arm when pulling the start cord
- b. Do not wear loose clothing, jewelry or objects that may become entangled in moving parts
- c. Ensure all guards are properly installed
- d. Pull cord to start machine

Figure 1

**5. Move Cart to Debris Area**

- a. Ensure a clear pathway. Move obstacles or people as necessary
- b. If obstacles cannot be moved, find an alternative route to the debris
- c. Proceed to use cart maneuvering controls to carefully move the cart to the debris area

**6. Load Dump Cart**

- a. Place, do not throw, large / heavy objects in the cart
- b. Avoid excessive bending. Sweep smaller debris into piles and shovel into cart
- c. Never overload the cart. Debris may fall off and cause trip hazards

**Procedure (con't)**

**7. Move Cart to Dump Chute**

- a. Look behind you before reversing direction
- b. Ensure a clear pathway exists
- c. Move slowly and steadily when backing up. Walking backwards creates an additional trip/fall hazard

**8. Drive Cart up Ramp to Dump Chute**

- a. Ensure the ramp is clear of mud, ice, water or any substance that will reduce traction
- b. Make sure there is a wheel stop in place at the end of the ramp that is capable of holding the load
- c. Wear work boots with good traction
- d. Proceed up ramp with cart

**9. Dump Load**

- a. Make sure there are no workers in the dump zone below
- b. Wear safety eyewear when dumping to protect eyes
- c. Position tire against the stop and lift up on the handles to dump
- d. Keep a firm grip on both handles to avoid the load tipping to the side and causing muscle strain
- e. Off load large pieces by hand

**10. Backing Up**

- a. Never back up within 10 feet of an edge (or 8 feet of operating parallel to the roof)
- b. Always look behind before reversing direction
- c. Walking backwards creates an additional trip hazard, proceed backward slowly

**11. Return to Step 1 and Repeat OR**

**12. Secure Equipment at End of Shift**

- a. Make sure equipment is in a safe, secure location and all locks are in place, fuel is shut off, etc

**13. Maintenance**

- a. Disconnect spark plug wire before working on machine
- b. Lubrication recommendations are as follows:
  - i. Grease roller bearings in wheel hubs as well as pillow block bearings on brake and differential shaft weekly, or more often as needed
  - ii. All moving parts in the control linkage as well as the chains should be kept well oiled to prevent rust and encourage free movement
  - iii. All moving parts should be checked regularly for debris buildup and if it occurs should be cleaned with a wire brush
- c. Check condition of hydraulic oil frequently. If the oil begins to look black or dirty, change immediately

--	---

<p><b>Procedure</b></p> <p><b>1. Conduct a pre-starting inspection</b></p> <ol style="list-style-type: none"> <li>a. Inspect equipment for damages and defects. If defects are found, do not use and notify your supervisor to arrange for repairs</li> <li>b. Tighten any loose clamps to manufacturer's specifications</li> <li>c. Check the security of the throttle lever. Should be smooth and easy action. The throttle lever lock should function properly</li> <li>d. Check for clean and dry handles and test the function of the I-O switch. Keep handles free of oil and fuel</li> <li>e. Check the oil and gas levels and refill as necessary</li> <li>f. Never refuel a hot engine</li> <li>g. Inspect the fuel cap making sure it stays securely fastened</li> <li>h. Inspect the work area for obstacles and people. Move as necessary</li> <li>i. Never operate the machine with a faulty exhaust</li> </ol>	
--	--

**Procedure (con't)**

**2. Start Motor**

- a. Make sure there are no other people within a working range of 15 meters (50 feet)
- b. Ensure proper guards are in place and accessories are attached
- c. Do not wear loose clothing or objects that could become entangled. Wear long sleeves and work gloves to avoid burns from contact with hot motor
- d. Remove objects that could injure hand or arm when pulling start cord
- e. Pull cord to start motor taking care not to overstrain arm and back muscles

**3. Operation**

- a. All protective parts and guards supplied with the machine must be used during operation
- b. Choose the location of the work area you will blow towards
- c. Make sure there are no workers in that area and no openings, doorways, vents, etc. that debris could be blown into
- d. Always wrap your fingers tightly around the handle, keeping the control handle cradled between your thumb and forefinger
- e. Always operate the blower in a well-ventilated area and in such a manner as to avoid inhalation of exhaust gases

**4. Shut down**

- a. Switch off the engine when resting or leaving the blower unattended
- b. Place in a safe location to avoid danger to others, setting fire to combustible materials or damage to the machine
- c. Shut off the engine during transport and position safely in vehicle to avoid fuel leakage. Make sure the fuel tank is completely empty when transporting

**5. Refueling**

- a. Shut off engine, keep away from open flame and do not smoke
- b. Engine must be allowed to cool for at least 2 minutes before refueling
- c. Take care not to spill fuel or oil to prevent soil contamination
- d. Clean blower immediately if fuel is spilled. Change clothes immediately and allow wet clothes to dry before disposing to prevent spontaneous combustion
- e. Carefully tighten the locking screw of the fuel tank. Only start the machine 3 meters (10 feet) away from where it was refueled
- f. Never refuel in closed rooms. Fuel vapors will accumulate at ground level causing a risk of explosion
- g. Only transport fuel in approved containers.
- h. Do not attempt to refuel a hot or a running engine.

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Protecting employees and general public from injuries associated with the use of Chainsaws. The chain at full throttle can reach speeds of 45 MPH, it is important that you read & understand as well as observe the following safety precautions

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Kickback</li> <li>● Dust</li> </ul>	<ul style="list-style-type: none"> <li>● Cuts</li> <li>● Flammable liquids</li> </ul>	<ul style="list-style-type: none"> <li>● Noise</li> <li>● Flying Debris</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● PPE</li> <li>● Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● First Aid</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice/Procedure</li> <li>● Training</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Chainsaw</li> </ul>	<ul style="list-style-type: none"> <li>● Fuel (Gas)</li> </ul>	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO have supervisors’ approval before operating a chainsaw</li> <li>● DO comply with all OHS Regulations</li> <li>● DO be familiar with Operation Manual and Safe Work Practice/Job Procedure</li> <li>● DO inspect before each use</li> <li>● DO tag out and have repaired if any parts are broken or missing</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT operate a chainsaw by yourself. Always have at least 2 people on site</li> <li>● DO NOT operate a chainsaw if you are not feeling physically and mentally competent to safely complete the task</li> <li>● DO NOT use the saw if there is any damage or missing parts</li> <li>● DO NOT cut anything above shoulder height</li> </ul>
--	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Pre Set-up (Before Operating the Saw)</b> <ol style="list-style-type: none"> <li>a. Inspect to make sure all safety controls are intact</li> <li>b. Trigger lock, chain catcher and chain brake should be in working order</li> <li>c. Never use saw if any parts are broken or missing</li> <li>d. Tag out saw and have repaired if found broken</li> <li>e. Check weather conditions – don’t go out in extreme weather conditions</li> <li>f. Check for fluids (gas, oil) never refuel a hot saw, wait for it to cool down first</li> <li>g. Check for appropriate file, file guide, wedges, axe, first aid kit</li> <li>h. Make sure saw is filed correctly (use file guide)</li> <li>i. Make sure saw is running correctly</li> <li>j. Make sure you have appropriate signage</li> </ol> </li> <li>2. <b>Starting the Saw</b> <ol style="list-style-type: none"> <li>a. Make sure saw is fuelled</li> <li>b. Turn on saw put choke on</li> <li>c. Always use a three point start when starting a cold saw (left hand on handle, knee on saw, pull with right hand)</li> <li>d. Once saw turns over remove choke and pull again</li> <li>e. Test chain brake by running saw at ¾ throttle, and activate the chain brake with back of hand.</li> <li>f. When walking with saw have chain brake on or turn saw off, as well as saw facing backwards as you walk</li> </ol> </li> </ol>
--

**Procedure (con't)**

**3. Cutting Instructions**

- a. Grip:
  - i. Always hold saw with a firm grip using both hands when the engine is running
  - ii. Place your right hand on the rear handle and throttle trigger, your left hand on the front handle bar, left hander should follow these instructions as well
  - iii. Wrap your fingers and thumb around the handles. With your hands in this position, you can best oppose and absorb the push, pull and kickback forces of your saw without losing control

**4. Post Procedure / Take Down**

- a. Clean up:
  - i. Remove side plate and clean out any debris that may interfere with the chain
  - ii. Clean air filter (blow it out or use soap and water) never use mix gas
  - iii. Make sure safety controls are working (chain catcher, trigger lock, chain brake)
  - iv. Sharpen saw or take it to be sharpened by a professional
  - v. Refuel saw. Chainsaw must be allowed to cool for at least 2 minutes before refueling

**5. Things to look out for when using a chainsaw**

- Overhead hazards
- Good escape route
- Buck to the high side so the log will not roll towards you
- Check for pivot points
- Make sure you identify the correct binds
- If you can't identify the bind always cut bottom first
- Never cut anything above shoulder height
- In the event of an emergency, turn off saw first and then take appropriate measures

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

The cut-off saw is a high-speed, fast-cutting power tool so special safety precautions must be observed to reduce the risk of personal injury and fire. It is important to fully understand and observe the safety precautions and procedures below.

Hazards Present		
<ul style="list-style-type: none"> <li>● Explosive Disk</li> <li>● Dust</li> </ul>	<ul style="list-style-type: none"> <li>● Cuts</li> <li>● Burns and Heat</li> </ul>	<ul style="list-style-type: none"> <li>● Noise</li> <li>● Flying Debris</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● PPE</li> <li>● Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Equipment Training</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practice/Procedure</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>● Cut-off Saw</li> </ul>	<ul style="list-style-type: none"> <li>● Fuel</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturer’s Manual</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO have supervisors’ approval before operating a cut-off saw</li> <li>● DO make sure the saw is in good working order before you use it</li> <li>● DO ensure it is “unplugged” before changing the blade</li> <li>● DO keep work area clean</li> <li>● DO consult manufacturer’s instructions for correct saw blade size and RPM</li> <li>● DO only cut asphalt, concrete, stone, brick, and plastics</li> <li>● DO inspect the Saw Blade frequently, and replace immediately if the Blade is cracked, or warped. Cracked or warped Saw Blades may shatter or break and cause serious personal injury</li> <li>● DO keep hands and fingers away from the cutting area and Saw Blade</li> <li>● DO allow the Saw Blade to spin up to full speed before feeding it into a workpiece</li> <li>● DO when cutting a large workpiece, make sure it’s entire length is properly supported</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT wear loose clothing, jewelry or objects that may become entangled in moving parts</li> <li>● DO NOT operate a chainsaw if you are not feeling physically and mentally competent to safely complete the task</li> <li>● DO NOT use the saw if there is any damage or missing parts</li> <li>● DO NOT operate without training</li> <li>● DO NOT use carbide-tipped, woodcutting, or circular machine Saw Blades. They can cause severe personal injury from reactive forces, blade contact, or thrown objects</li> <li>● DO NOT attempt to cut more than one workpiece at a time</li> <li>● DO NOT attempt to remove material stuck in the cut-off saw while it is operating</li> <li>● DO NOT force the Saw Blade into the workpiece when cutting. Apply moderate pressure, allowing the Saw Blade to cut without being forced</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Pre Set-up (Before Operating the Saw)</b> <ol style="list-style-type: none"> <li>a. Inspect to make sure all safety controls are intact and there is no damage or missing parts</li> <li>b. Consult manufacturer’s instructions for proper fuel mix. Never run the Engine with an improper fuel mix, low or no fuel mix. This will permanently damage the unit</li> <li>c. Mix only enough fuel for a few work days. The maximum storage time of mixed fuel is 3 months</li> </ol> </li> </ol>
---

**Procedure (con't)**

**2. To Install a Saw Blade**

- a. To avoid accidental injury, always wear heavy duty work gloves when changing the saw blade
- b. Allow the Saw Blade to completely cool before handling. The Saw Blade will become hot while cutting
- c. Press down on the Shaft Lock to hold the Blade Shaft in position
- d. Loosen and remove the Hex Bolt. Then, remove the Washer and outer Flange
- e. Mount the new Saw Blade on the Blade Shaft. IMPORTANT: Make sure the arrow shown on the Saw Blade points in the same direction as the arrow shown on the Blade Guard
- f. Once the Saw Blade is mounted on the Blade Shaft, replace the outer Flange and Washer. Then, firmly tighten the Hex Bolt to secure the Saw Blade in place
- g. Make sure to check the Blade Guard for proper operation. If necessary, loosen the Blade Guard Positioning Knob to adjust the Blade Guard position. Never disable the Guard
- h. Do not use the Cut Off Saw if the Guard assembly does not operate properly. Before each use, make sure the Blade Guard does not touch the Saw Blade

**3. Starting the Cut-off Saw**

- a. Wear approved safety impact goggles, hearing protection, and dust mask/respirator during use
- b. Place the Cut Off Saw on flat, level ground, so that the Saw Blade does not contact any objects or the ground. Orient the saw away from your body
- c. Pull the Throttle Trigger all the way back, press down on the Full Throttle Lock Button and Release the Throttle Trigger
- d. Press down on the Decompression Valve and turn the Kill Switch out of the off position
- e. Set the Choke Lever to the appropriate position (If the engine is cold or warm)
- f. Hold the Front Handle with your left hand, and place your right foot on the rear section of the Main Housing. Place your foot only on the flat portion of the Main Housing, otherwise the unit could become unstable or components could be damaged. Firmly press the Cut Off Saw to the ground
- g. Hold the Starter Grip securely, and maintain balance while slowly pulling out the Starter Rope for a short distance. Then, pull out the Starter Rope quickly about 2-1/2". After pulling, bring Starter Grip slowly to the housing before releasing it
- h. If the Engine does not start, press the Decompression Valve again and attempt to start the Engine. It may take repeated attempts (8-16 tries) to start the engine
- i. If the Engine runs for a while but then stops, press the Decompression Valve. Move the Choke Lever "warm" to and restart the Engine
- j. As soon as the Engine starts, squeeze the Throttle Trigger briefly and let up. The Full Throttle Lock Button will revert to its original position, causing the Engine to idle
- k. NOTE: If the Engine is new, or has been stored for a long period of time, pull the Starter Grip several times to ensure sufficient fuel is delivered into the fuel line and combustion chamber of the Engine

**4. Stopping the Cut-off Saw**

- a. Allow the Engine to idle. Then, press and hold the Kill Switch located at the front of the Rear Handle.
- b. When storing the Saw, make sure to store the unit in a clean, dry, safe location out of reach of children and other unauthorized people. For long periods of storage, drain and clean the Fuel Tank.

**Procedure (con't)**

**5. Operating the Cut-off Saw**

- a. NOTE: During the break-in phase, which takes about eight hours of use, the Cut Off Saw must not be operated at high speeds without a load (do not pull the Throttle Trigger beyond 3/4 of full throttle). Following this procedure will lengthen the service life of the Saw. After running the Cut Off Saw for an extended period of time, allow the Engine to idle for several minutes to dissipate the heat. This will prevent some engine parts (ignition system, carburetor, etc.) from being damaged by overheating
- b. IMPORTANT: The Saw Blade will not rotate when the Engine idles
- c. When the Cut Off Saw is ready to operate, gently pull the Throttle Trigger backward to accelerate the Engine. Once the Engine accelerates, the Saw Blade will begin to rotate and speed up. When the blade speed is up and stable, you can begin to move the Saw slowly toward the object to be cut
- d. While holding the Cut Off Saw firmly, approach the object to be cut with the Saw Blade and increase pressure on the Cut Off Saw slowly until the Saw Blade is at the desired depth of cut. Move forward along a straight line to complete the cut
- e. Do not force the Saw Blade into the workpiece when cutting. Apply moderate pressure, allowing the Saw Blade to cut without being forced
- f. To stop or halt the cut (when a cut is completed, or the engine runs out of fuel during the cut, or an abnormal sound is heard), first:
  - i. Lift the saw blade out of the cut.
  - ii. Release the Throttle Trigger.
  - iii. Wait until the engine slows down to idle speed and the blade stops rotating.
  - iv. Turn off the saw.

**6. Misc. Precautions**

- a. WARNING! Some dust created by power sanding, sawing, grinding, drilling and other construction activities, contain chemicals known to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are: lead from lead-based paints, crystalline silica from bricks and cement or other masonry products, arsenic and chromium from chemically treated lumber. Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well-ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles
- b. WARNING! People with pacemakers should consult their physician(s) before using this product. Electromagnetic fields in close proximity to a heart pacemaker could cause interference to or failure of the pacemaker
- c. WARNING! The warnings and precautions discussed in this manual cannot cover all possible conditions and situations that may occur. It must be understood by the operator that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Protecting employees and general public from injuries associated with the use of Single Blade Cutting Machines.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Inhalation of Harmful Substances</li> <li>● Slips/Trips</li> </ul>	<ul style="list-style-type: none"> <li>● Fall from Height</li> <li>● Strains/Sprains</li> </ul>	<ul style="list-style-type: none"> <li>● Cuts/Bruises</li> <li>● Fire/Explosion</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● Fall Protection</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>● Proper Clothing</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Cutting Machine</li> </ul>	<ul style="list-style-type: none"> <li>● Fuel (Gas)</li> </ul>	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO wear long sleeve shirts, buttoned at cuffs, glasses, goggles or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> <li>● DO replace worn, damaged or illegible labels from the manufacturer</li> <li>● DO keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>● DO inspect the machine before use</li> <li>● DO shut off engine when machine is not in use and/or not attended</li> <li>● DO properly guard and/or cover any roof openings. Use proper signs and warnings</li> <li>● DO read and understand the operation manual before operating the Roof Cutter</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT operate machine within 10 ft of the roof edge</li> <li>● DO NOT operate the unit without proper guards in place</li> <li>● DO NOT allow smoking anywhere around the machine</li> <li>● DO NOT allow flames or sparks near where the engine is being refueled</li> <li>● DO NOT operate if machine is damaged. Remove from service and have repaired by qualified person</li> <li>● DO NOT cut towards people, buildings, vehicles or other objects that could be damaged by flying debris</li> <li>● DO NOT touch the engine or muffler. They are hot and could cause burns</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Before you Operate the Roof Cutter</b> <ol style="list-style-type: none"> <li>a. Make sure you understand the manufacturer’s operation manual</li> <li>b. Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>c. Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, glasses, goggles or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> </ol>	 <p>Figure 1</p>
---	---

**Procedure (con't)**

- 2. Conduct a pre-starting inspection of equipment and work area**
  - a. Check the engine crankcase oil. If the engine will not start or run it may be low on oil
  - b. Make sure there is a fire extinguisher within easy access when operating gas powered machines
  - c. Check the fuel supply. Fill with fresh, clean unleaded gasoline
  - d. Securely tighten all caps of the engine and gas can after filling
  - e. Clean up any spills completely and dispose in approved storage container
  - f. Do not operate or test machine in an enclosed area
  - g. Check for bent frame members, broken welds or damaged components. If damaged, remove from service to be repaired by qualified person
- 3. Hoist the Machine to the Roof**
  - a. Inspect the hoist.
  - b. Make sure everyone on the ground is completely clear of the hoisting area
  - c. Consult your “Hoisting” Job Procedure for complete hoisting procedures
  - d. Connect hooks from the hoist line to rings. Hoist using these rings only
- 4. Adjust Cutting Depth**
  - a. Check the depth of the roof system. The Roof Cutter can easily cut into the roof deck if the depth of cut is not set correctly
  - b. The depth control bar is located on the right hand side of the machine
  - c. By pushing down on the handlebars of the machine, the depth control will slide into the idle position
  - d. Turning the depth control handle will increase the cutting depth. A counterclockwise rotation will raise the cutter blade

Figure 2

Cutter Blade in Cut Position

Cutter Blade in Idle Position

- 5. Starting the machine**
  - a. Ensure a clear pathway. Remove obstacles or people
  - b. Do not wear loose clothing, jewelry or objects that may become entangled in moving parts
  - c. Pull cord to start machine
- 6. Operating the machine**
  - a. Move lever to engage blade & turn handle to set depth
  - b. Push forward in a straight line only to cut through roofing materials that will be removed
  - c. The engine fins should be checked every 10 hours of machine use and more frequently in dusty situations. Dirt build-up will cause the engine to overheat

**Procedure (con't)**

**7. Turning the machine**

- a. Lower the engine RPM to an idle speed
- b. Push down on the handles, after approximately 5 inches the top of the handle will drop down into the idle position (Figure 2)
- c. Turn the Roof Cutter to face the desired direction for the next cut
- d. Turn up the engine RPM to full cutting speed
- e. Lift the handle and slowly lower the roof cutter back into the roof
- f. Before moving forward ensure that you are cutting into the roof only, and not into the decking material

**8. Pulling the Machine Backwards**

- a. If you have to pull the machine backwards make sure there are no people or property that flying debris could hit
- b. The machine will forcefully eject gravel and debris when pulled backwards. This should be avoided whenever possible

**9. Shut Down**

- a. Turn engine switch off
- b. Do not leave Roof Cutter unattended for at least 30 minutes after it has been shut down
- c. Clean engine fins with a roofing knife immediately after use, while any asphalt is still hot and liquid. Overheating of the engine is a common cause of engine failure. Dirt buildup can reduce the amount of air being directed into the engine for cooling. In addition, when the cooling fins of engine build up with asphalt and wood fibers, it can become a serious fire hazard
- d. The engine cylinder barrel and cooling fins should be sprayed with an orange cleaner or other degreaser to reduce the remaining asphalt

**General**

Protecting employees and general public from injuries associated with the use of Gravel Spreaders.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Inhalation of Harmful Substances</li> <li>● Slips/Trips</li> </ul>	<ul style="list-style-type: none"> <li>● Fall from Height</li> <li>● Strains/Sprains</li> </ul>	<ul style="list-style-type: none"> <li>● Falling Objects</li> <li>● Fire/Explosion</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● Fall Protection</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>● WHMIS Training</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Power Buggy/Workhorse</li> </ul>	<ul style="list-style-type: none"> <li>● Fuel (Gas)</li> </ul>	<ul style="list-style-type: none"> <li>● Hoist</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure this equipment is used by a competent person who has read and understood the job procedure</li> <li>● DO wear sensible, protective clothing and footwear offering good grip, plus work gloves and a hard hat</li> <li>● DO always clean up any spills immediately</li> <li>● DO ensure all guards are properly installed</li> <li>● DO avoid excessive bending. Sweep smaller debris into piles and shovel into cart</li> <li>● DO wear boots with good traction, safety eyewear and dust mask if required</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT leave motorized equipment running while unattended</li> <li>● DO NOT use this equipment if you are ill, feeling tired or under the influence of alcohol or drugs</li> <li>● DO NOT store fuel on or close to a hot engine</li> <li>● DO NOT smoke in refueling areas</li> <li>● DO NOT wear loose clothing, jewelry or objects that may become entangled in moving parts</li> <li>● DO NOT overload the gravel bucket</li> </ul>
---	---

**Procedure**

1. **Conduct a pre-starting inspection of equipment and work area**
  - a. Make sure there is a fire extinguisher within easy access when operating gas powered machines
  - b. Double check the equipment’s general condition before the start of each work day
  - c. Make sure you read and understand the manufacturer’s instructions and job procedures
  - d. Check the gas & oil levels and refill as necessary. Always clean up spills immediately.
2. **Check Load Limits and Capacities**
  - a. Check roof load limits and capacities with builder, owner and architect or on site engineer

Loaded Machine and Attachment Weights (Approximate)	
<b>Combination</b> Power Unit with Gravel Spreader	<b>Weight</b> 1175 lbs plus load
<b>Capacities</b> <b>Combination</b> Gravel Spreader	<b>Capacity</b> 6.0 cubic feet

*For calculating the loads the following data may be used:*

*Gravel weighs approx. 108 lbs per cu. Ft.*

\* Check with your material sources for the actual weight of the material that you are using.

**Procedure (con't)**

**3. Attach the Gravel Spreader**

- a. A hammer and pliers are required for the installation of the gravel spreader attachment
- b. Install the gravel spreader as shown in Figure 1
- c. The shaft ends of the spreader drop into “U” mount brackets at the front of the power unit frame
- d. Two swivel locks open and close on top of the power unit to lock the gravel spreader into place
- e. To install the handle and linkage, first attach the linkage to the dispenser and then connect other end with handle and secure with provided bolts and nuts
- f. An adjustment screw is located on the upper right corner of the dispenser. Clockwise adjustment of the screw will make the dispenser door open less. Counter clockwise makes the door open more
- g. The yoke assembly on the back of the dispenser is preset to the proper door tension
- h. If more tension is needed for door closure, remove the clevis pin on the yoke and tighten as needed

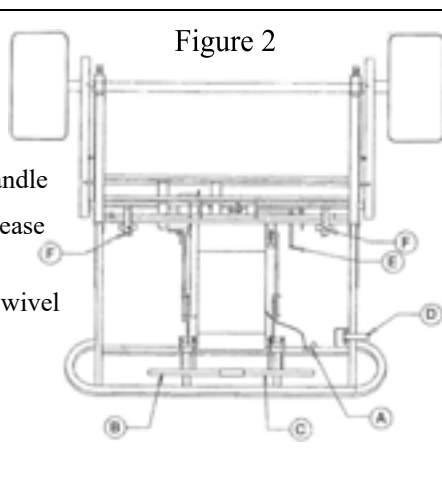

**4. Hoist the Machine to the Roof**

- a. Inspect the hoist.
- b. Make sure everyone on the ground is completely clear of the hoisting area
- c. Consult your “Hoisting” Job Procedure for complete hoisting procedures
- d. Connect hooks from the hoist line to rings provided on side of Cart. Hoist using these rings only
- e. Approximate Machine & Attachment Weights

Power Unit	340 lbs
Gravel Spreader	150 lbs

**5. Engine Startup**

- a. Remove any objects that could injure hands or arm when pulling start cord
- b. Do not wear loose clothing, jewelry or objects that may become entangled in moving parts
- c. Ensure all guards are properly installed
- d. Pull cord to start machine

<p>A – Throttle Control</p> <p>B – Clutch Handle</p> <p>C – Brake Handle</p> <p>D – Gravel Bucket Handle</p> <p>E – Dump Bucket Release Handle</p> <p>F – Gravel Spreader Swivel Lock</p>	<p style="text-align: center;">Figure 2</p> 	<p>To move the power unit, powered, push down on Clutch Handle, B</p> <p>To push the power unit forward, unpowered, push down on the Brake Handle, C</p> <p>The speed is controlled by the Throttle Lever, A. The higher the engine RPM, the faster the machine will travel</p> <p>Gravel dispensing lever is located furthest to the right. Pulling back on the gravel spreader handle, D, opens the gate at the bottom of the gravel spreader. Pushing forward on the lever closes the door</p>
---	---	---

**Procedure (con't)**

**5. Engine Startup (con't)**

- e. When operating machine for the first time position the machine on the ground or in an open level area away from obstructions and roof edges
- f. Start the machine by pulling the cord and allow to warm up for 5 minutes
- g. With no load on the machine, practice maneuvering the machine by operating the controls
- h. All operators must check to see that the brake is functioning properly
- i. When the Forward / Reverse handle is released the machine should stop instantly. If it doesn't, do not operate the machine until repairs or adjustments are made

**6. Operation**

- a. Ensure a clear pathway. All obstacles or people should be clear
- b. The machine is designed for use inside perimeter warning line system
- c. Do not operate within 10 feet of the roof edge (or 6 feet of operating parallel to the roof)
- d. Never attempt to override the safety hydraulic system
- e. Turn the machine off when not in actual use by a qualified operator

**7. Backing Up**

- a. Never back up within 10 feet of an edge (or 8 feet of operating parallel to the roof)
- b. Always look behind before reversing direction
- c. Walking backwards creates an additional trip hazard, proceed backward slowly

**8. Secure Equipment at End of Shift**

- a. Make sure equipment is in a safe, secure location and all locks are in place, fuel is shut off, etc

**9. Maintenance**

- a. Disconnect spark plug wire before working on machine
- b. Lubrication recommendations are as follows:
  - i. Grease roller bearings in wheel hubs as well as pillow block bearings on brake and differential shaft weekly, or more often as needed
  - ii. All moving parts in the control linkage as well as the chains should be kept well-oiled to prevent rust and encourage free movement
  - iii. All moving parts should be checked regularly for debris buildup and if it occurs should be cleaned with a wire brush
- c. Check condition of hydraulic oil frequently. If the oil begins to look black or dirty, change immediately

**General**

The RhinoBond System produces heat that can seriously injure people and damage metal objects. Failure to follow all instructions could result in property damage, serious personal injury, electric shock or death.

Hazards Present		
• Electrical Shock	• Serious Personal Injury	• Death
Protective Mechanisms		
• Fall Protection	• Manufacturer’s Instructions	• PPE
Equipment / Tools Required		
• RhinoBond Tool	• Cooling Clamps	• RhinoBond Fasteners and Plates
• Power Cord (100 ft max./12 gauge min.)	• Grease Pencil	• Pliers & Plunger

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO unplug the cord before attempting to inspect or clean the tool, or you risk electrical shock</li> <li>• DO keep the cord away from heat, liquids, sharp edges and moving parts</li> <li>• DO stop using the tool if the cord is damaged. Notify your supervisor so he/she can arrange repairs with an authorized RhinoBond System Service Technician</li> <li>• DO stay alert and aware when using the RhinoBond tool</li> <li>• DO read and understand the operation manual before operating the RhinoBond Tool</li> <li>• DO inspect the tool before use</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT use this tool if you (or anyone near you has) a pacemaker, surgical implant, prosthesis or other medical device</li> <li>• DO NOT activate tool over metal objects in or on the floor</li> <li>• DO NOT allow any objects containing metal, such as jewelry, watches, etc., within 3 inches of the bottom of the tool during use</li> <li>• DO NOT activate the tool over the power cord</li> <li>• DO NOT operate the unit without proper guards in place</li> <li>• DO NOT use the cord to carry the tool</li> <li>• DO NOT operate if tool is damaged. Remove from service and have repaired by qualified person</li> <li>• DO NOT use this tool when tired or under the influence of drugs, alcohol or medication that can alter your awareness</li> </ul>
--	---

**Procedure**

**1. RhinoBond System Components (See Figure 1)**

Figure 1

**2. Conduct a pre-starting inspection of equipment and work area**

- a. Inspect the tool before use to ensure there are no defects or damages to the tool or power cord
- b. Make sure you read and understand the manufacturer’s instructions and job procedures
- c. c) Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others

**3. Install the Plates**

- a. It is important to install plates in a straight line. This will improve system performance and help you more easily identify plates under the membrane (See Figure 2)
- b. Based on manufacturer’s fastening pattern, use chalk lines to guide fastener/plate placement.

Figure 2

- c. Lay insulation over substrate. Place plates in pattern specified by roofing system manufacturer
- d. Secure plates with RhiniBond fasteners. For best installation results, use a variable speed screw gun (2,500 rpm max.) Do not overdrive fasteners. (See Figure 3)

**Procedure (con't)**

**Important Tip**

Whenever the ambient temperature changes by 15°F (warmer or cooler) recalibrate the RhinoBond tool.

Figure 3

**4. Calibrate the RhinoBond Tool**

- a. Adjust the RhinoBond tool for maximum bond strength based on the ambient temperature (from 0°F to 120°F / -18°C to 49°C) and membrane thickness. Adjust the energy level to produce an optimal bond
- b. Start calibration at 0 and test samples at +1, +2, +3, etc
- c. Use the following calibration process to adjust the energy setting for each tool to the appropriate level for the conditions on the job
  1. Place 5 plates on a sample of your insulation, 10” apart. (Do not use screws.) Lay a sample of your membrane over the plates (See Figure 4)
  2. Locate each plate by rubbing the membrane with the sole of your boot
  3. Plug the tool into a stable 120V/20A energy source
  4. Determine initial energy setting to produce an optimal bond. Press ▲ or ▼ next to the display to change the energy setting and press 
  5. Center red circle of the tool directly over the first plate. (Figure 5)
  6. Activate the weld using the “Activation” button on the handle. (Figure 6)
  7. While the tool is activated (welding), trace around the base of the tool with a grease pencil. This will help you judge your accuracy in centering the coil over the plate. (Figure 6)
  8. Remove the tool after the cycle ends and immediately set a cooling clamp directly onto the center of the plate (Figure 7)
  9. Mark the energy setting next to the plate position with a grease pencil (Figure 8)
  10. Repeat this process for each plate, increasing the energy +1 unit each time. Allow plates to cool completely, at least 5 minutes, before continuing
  11. If your calibration sample is attached to the roll of membrane, cut it off
  12. Remove the cooling clamps and turn membrane over to reveal the welded plates
  13. Use pliers to peel each plate off of the membrane. Check bond results as per Figure 9.

Figure 4

Figure 5

Figure 6

Figure 7

Figure 8

**Warning**

Do not move the RhinoBond tool during cycle.

**Procedure (con't)**

**Important Tip #1**  
Read Additional Display Options in Manufacturer’s manual for useful display messages and optional features.

**Important Tip #2**  
To increase your pace, work across the sheet, moving cooling clamps from one row to the next as you need them.

**5. Bond the Membrane**

Figure 9

- a. Set tool to level that provides a 100% bond. Several settings may yield a 100% bond. If this happens, select the middle energy level setting. (See Figure 9 for examples of optimal and desirable bonds)
- b. Adjust the handle height, if desired, by releasing handle clamps and gently pulling or pushing handle to desired position
- c. Center the calibrated tool over the first plate in pattern and activate the weld. Tool must be centered over the plate to create a 100% bond
- d. Place cooling clamp over the welded plate. Keep cooling clamp in place at least 45 seconds while the assembly cools
- e. Repeat process for each plate

**6. RhinoBond Weld Test**

- a. To determine if a weld has been made, place the plunger next to a welded plate and create enough suction to lift the membrane. A weld will create the membrane as shown in Figure 10. If the assembly is not welded, the membrane will lift up from the plate
- b. Mark any plates that are not welded as a reminder to complete the weld.

Figure 10

**7. Shut Down**

- a. a) Make sure tool is shut off and put away in case for safe keeping. Do not leave on the roof. Store in a safe, dry location between uses

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

They are hot and could cause burns</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li><b>Before you Operate the Ripping Machine</b> <ol style="list-style-type: none"> <li>Make sure you understand the manufacturer’s operation manual</li> <li>Make sure there is a fire extinguisher within easy access when operating gas powered machines</li> <li>Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, glasses, goggles or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> <li><b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>Check the engine crankcase oil. If the engine will not start or run it may be low on oil</li> </ol> </li> </ol>	 <p>Figure 1</p>
---	--

**Procedure (con't)**

3. **Conduct a pre-starting inspection of equipment and work area (con't)**
  - a. Check the fuel supply. Fill with fresh, clean unleaded gasoline
  - b. Securely tighten all caps of the engine and gas can after filling
  - c. Clean up any spills completely and dispose in approved storage container
  - d. Do not operate or test machine in an enclosed area
  - e. Check for bent frame members, broken welds or damaged components. If damaged, remove from service to be repaired by qualified person
4. **Hoist the Machine to the Roof**
  - a. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight
  - b. Inspect the hoist
  - c. Make sure everyone on the ground is completely clear of the hoisting area
  - d. Consult your “Hoisting” Job Procedure for complete hoisting procedures
  - e. Connect hooks from the hoist line to rings. Hoist using these rings only
5. **Check Roof Depth**
  - a. Check the depth of the roof system. The powerful hydraulic system on a Roof Remover can easily cut into the roof deck with the Roof Remover or Double Cutter Attachments.
  - b. The Roof Remover Attachment is available with several different blade options (Figure 2):

Figure 2

- A. **15” Angled Blade** – This is the standard blade included with a Roof Remover Attachment. Its high carbon steel, heat treated edge will remove most forms of roofing.
- B. **24” Angled Blade** – This blade is designed for lighter duty, high production jobs. A larger piece of roof can be lifted with this blade. It is important to center the load on the middle of this blade while using it, as a side load can result in damage to the Roof Remover frames.
- C. **15” Toothed Blade** – Designed for use in the most rugged of tear offs or in situations with a large number of mechanical fasteners. The 15” toothed blade cuts the contact area of the blade in half, doubling the impact strength of the blade against roof materials.

6. **Starting the machine (See Figure 3)**
  - a. Ensure a clear pathway. Remove obstacles or people
  - b. Do not wear loose clothing, jewelry or objects that may become entangled in moving parts
  - c. Before anything else you must turn the speed control lever (C) to the slowest position.  
**Caution:** Never start the tractor or activate the wheel control lever (A) before first turning the speed control lever (C) to the slowest position possible.
  - d. Turn the on/off switch on the engine to the on position and start the engine

**Procedure (con't)**

- A – Wheel Control Lever
- B – Accessory Control Lever
- C – Speed Control Lever
- D – Hydraulic Tank Filler/Breather Cap

Figure 3

**7. Operating the machine**

- a. With the speed control lever (C) set to minimum speed, engage the wheel control lever (A) in the forward direction. The machine should not move
- b. Activate the Roof Remover hydraulic ram by pushing the Accessory Control Lever (B) into the forward position
- c. Slowly turn the speed control lever (C) towards the FAST position, the tractor should slowly accelerate
- d. When the machine gets to the desired speed stop turning the speed control lever

**8. Stopping the machine**

- a. Use the speed control lever (C) to stop the machine by turning it to the SLOW position
- b. Only change between forward and reverse movement when the speed control lever is set to a minimum. The power of the Roof Remover can damage itself if the machine is engaged through the forward/reverse lever while the speed control is set to a high velocity

**9. Shut Down**

- a. Turn engine switch off

**10. Maintenance**

- a. Lubrication

A Rod Ends	Grease Daily
B Bearings	Grease Daily
C Remover Chain	Lubricate with Oil Daily
D Actuator System	Grease Hourly as required
E Tractor Drive Chain	Lubricate with Oil Daily

**Procedure (con't)**

**10. Maintenance (con't)**

- b. Hydraulic Fuel Levels are monitored with an oil level gauge located on the rear of the hydraulic tank near the operator's feet. Check before the engine is first started and after 25 hours of operation
- c. Engine oil should be changed after every 25 operating hours. Change more frequently when operating conditions are extremely dusty
- d. Check the battery electrolyte level every 25 hours. Always keep the battery fully charged and clean. If the battery terminals are corroded, clean with a solution of water and baking soda. Under normal operating conditions the battery fluid levels may drop. To bring the fluid up to the required level, add distilled water
  - i. Clean the top of the battery and remove the filler caps
  - ii. Remove cell caps and check the electrolyte level in each cell. The level should be even with the bottom of the fill tubes. Interior plates must be covered
  - iii. Add distilled water as needed to bring each cell up to full level
  - iv. When the electrolyte decreases rapidly, check the charging system for overcharging.
  - v. Periodically check each cell for the correct specific gravity. After adding distilled water, charge the battery up by operating the engine and then check the specific gravity
  - vi. Replace filler caps. Clean up spills with water and paper towels.

Form F-07-5 General Roofing Powered Equipment Daily Pre-use Inspection

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. The appropriate regulations and statutes should always be consulted and adhered to. Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

Protecting employees and the general public from injuries associated with the use of the Sweeper.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Inhalation of Harmful Substances</li> <li>● Slips/Trips</li> </ul>	<ul style="list-style-type: none"> <li>● Fall from Height</li> <li>● Strains/Sprains</li> </ul>	<ul style="list-style-type: none"> <li>● Cuts/Bruises</li> <li>● Fire/Explosion</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● Fall Protection</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>● Proper Clothing</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Ripping Machine</li> </ul>	<ul style="list-style-type: none"> <li>● Fuel (Gas)</li> </ul>	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO wear long sleeve shirts, buttoned at cuffs, glasses, goggles or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> <li>● DO replace worn, damaged or illegible labels from the manufacturer</li> <li>● DO keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>● DO inspect the machine before use</li> <li>● DO shut off engine when machine is not in use and/or not attended</li> <li>● DO properly guard and/or cover any roof openings. Use proper signs and warnings</li> <li>● DO read and understand the operation manual before operating the Roof Cutter</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT operate machine within 10 ft of the roof edge</li> <li>● DO NOT operate the unit without proper guards in place</li> <li>● DO NOT allow smoking anywhere around the machine</li> <li>● DO NOT allow flames or sparks near where the engine is being refueled</li> <li>● DO NOT operate if machine is damaged. Remove from service and have repaired by qualified person</li> <li>● DO NOT cut towards people, buildings, vehicles or other objects that could be damaged by flying debris</li> <li>● DO NOT touch the engine or muffler. They are hot and could cause burns</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Before you Operate the Sweeper</b> <ol style="list-style-type: none"> <li>a. Make sure you understand the manufacturer’s operation manual</li> <li>b. Make sure there is a fire extinguisher within easy access when operating gas powered machines</li> <li>c. Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>d. Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, glasses, goggles or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> <li>2. <b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>a. Check the engine crankcase oil. If the engine will not start or run it may be low on oil</li> <li>b. Check the fuel supply. Fill with fresh, clean unleaded gasoline</li> <li>c. Securely tighten all caps of the engine and gas can after filling</li> <li>d. Clean up any spills completely and dispose in approved storage container</li> </ol> </li> </ol>	 <p>Figure 1</p>
---	---

**Procedure (con't)**

**2. Conduct a pre-starting inspection of equipment and work area (con't)**

- e. Do not operate or test machine in an enclosed area
- f. Check for bent frame members, broken welds or damaged components. If damaged, remove from service to be repaired by qualified person
- g. Have each operator practice maneuvering the machine around turns and at different speeds, in a flat open area on the ground before roof top operation. There should be a minimum of 30 minutes ground practice for each operator

**3. Hoist the Machine to the Roof**

- a. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight
- b. Properly guard and/or cover any roof openings. Use proper signage and warnings around these areas
- c. Inspect the hoist
- d. Make sure everyone on the ground is completely clear of the hoisting area
- e. Consult your “Hoisting” Job Procedure for complete hoisting procedures
- f. Connect hooks from the hoist line to rings. Hoist using these rings only

**4. Starting the machine**

- a. Ensure a clear pathway. Remove obstacles or people
- b. Do not wear loose clothing, jewelry or objects that may become entangled in moving parts.
- c. Do not operate machine within 10 ft of the roof edge. Always have a proper perimeter warning line system or guardrail system
- d. Start Motor.

**5. Operation of machine (See Figure 2)**

- a. Slowly engage the clutch (B) to avoid rapid starts and damage or injury from machine tipping or kicking back
- b. Move sweeper to work area
- c. Sweep roof area using the left handle (A) to engage brush

Controls:

Figure 2

- a. Brush Angle Control (Center, 15° Right, 15° Left)
- b. Wheel drive and Brush drive engagement lever

Warning:

- 1. Always push down on the handles (lifting brush) before engaging the drive lever.
- 2. If the machine creeps ahead without the handles engaged then the controls must be adjusted.
- 3. Never adjust the controls while the engine is running.

**Procedure (con't)**

**5. Operation of machine (con't)**

Controls (con't):

Figure 3

Adjustments to the Wheel and Brush Drive Clutch

If the drive belt is slipping or if the machine is moving with the levers released, the clutch may be out of alignment. The clutch can be adjusted by modifying the length of the cable running between the handle and the clutch arm. The length of the cable is controlled by a U-Bolt (See Figure 3)

Figure 4

Adjustments to the Brush Angle

The brush angle is controlled through the brush angle bar. To change the brush angle; lift the spring loaded pin and move brush into the desired angle. By releasing the pin the brush angle will lock into position.

**6. Shut down**

- a. Whenever the sweeper is left unattended, SHUT OFF THE ENGINE, even if leaving the machine for only a few seconds
- b. Reach down and flip the shut-off lever to the off position to shut down the engine

**7. 7) Maintenance**

- a. Dirt buildup in the spur gears can slowly push the gears apart, reducing the contact of the gear teeth. If the gears become separated sufficiently the drive system can fail, breaking the teeth from the gears. If dirt buildup is found in the spur gears, clean with a wire brush.

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker.

Hazards Present		
● Minor Injury	● Severe Injury	● Death
Protective Mechanisms		
● PPE / Control Zones	● Manufacturers Recommendations	● Training/Supervision
Equipment / Tools Required		
● Full Body Harness	● Energy Absorbing Lanyard/ Self-Retracting Lanyard	● Guardrails
● Anchor Point that can withstand 5000 lbs.	● Rope Grab / Lifeline	● Safety Monitor

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>● DO inspect all equipment before each use</li> <li>● Do remove from service if used in a fall</li> <li>● DO read and understand manufacturer’s instructions</li> <li>● DO ensure anchorage points are rigid</li> <li>● DO use caution around moving machinery, electrical hazards, chemical hazards and sharp edges</li> <li>● DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> <li>●</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use if subjected to fall arrest forces</li> <li>● DO NOT install or use if you have not been trained in its correct application and use</li> <li>● DO NOT use if there is a reason to doubt your fitness to absorb the impact from a fall arrest</li> <li>● DO NOT store equipment in direct sunlight. Avoid areas where chemical vapors are present</li> </ul>
--	--

<p><b>Procedure</b></p> <p><b>1. Definition/Explanation</b></p> <p>a. The purpose of this Code of Practice (COP) is to ensure that all Atlantic Roofer Limited employees, contractors and subcontractors engaged in working at and may fall at vertical distances of:</p> <ul style="list-style-type: none"> <li>i. 3 meters (10 ft.) or more above water or the nearest safe level.</li> <li>ii. Above any surface or object that could cause injury to the employee upon contact.</li> <li>iii. Above any open top tank, bin, hopper or vat</li> </ul> <p>b. b) For employees to thoroughly understand how to protect themselves and others present at the worksite where working at heights is required. The focus of this COP is on training and equipping employees with the tools necessary to eliminate or control the hazards associated with working at heights.</p> <p><b>2. Identified Hazards</b></p> <p>a. Sites may vary in what hazards they have but the compiled hazards of Atlantic Roofers Limited and North Shore Roofing sites are:</p> <ul style="list-style-type: none"> <li>i. Flat roofs, edge and control zones and roof access doors</li> <li>ii. Sloped roofs</li> </ul>
--

**Procedure (con't)**

**2. Identified Hazards (con't)**

- iii. Aerial lifting devices
- iv. Work from Scaffolding and ladders
- v. Mezzanine openings
- vi. Construction sites, openings in roof, hazardous objects or surfaces

b. Risks of injury

- i. Minor injury
- ii. Severe injury
- iii. Death

**3. Training Required**

- a. Only Atlantic Roofer Limited and North Shore Roofing employees adequately trained in fall protection will conduct work when fall protection system use is required. Fall protection training must include general information about the hazards associated with working at heights and specific information regarding control methods available to control these known hazards.
- b. There are several different internal and external fall protection courses available and it is the responsibility of each Branch to determine the training required to help employees perform their jobs in a healthy and safe manner. Suggested courses are:
  - i. Provincial Construction Safety Association Fall Protection Generic Course
  - ii. In House Fall Protection Generic (Given by Safety Coordinator)
  - iii. In House Fall Protection Refresher (Given by Safety Coordinator)

**4. Inspection**

- a. Prior to the use of any component, a pre-use inspection must be conducted on each work shift by the worker using them as required by the manufacturer
- b. Training required prior to being given this responsibility must ensure that this inspection requirement is effectively communicated to all workers having to perform inspections and that workers are adequately trained on proper inspection methods
- c. Items to check for during inspections include:
  - i. Mildew, wear or damage
  - ii. Cuts, tears, or abrasions
  - iii. Stretching and loose or damaged stitching
  - iv. Loose or damaged mountings
  - v. Cracked, broken and deformed D rings or snap hooks
  - vi. Contact with fire, acids or other corrosives
  - vii. Distorted hooks or faulty hook springs
  - viii. Tongues ill-fitted to the shoulder of buckles
  - ix. Ropes that show wear or internal deterioration
  - x. Damaged mechanical operating components
  - xi. Any other item specified by the manufacturer
- d. This inspection should be repeated at the end of each use to determine if the component sustained any damages during work activities. If the component is found to have any deficiencies, it must be removed from service immediately and tagged “Unstable” or destroyed

**5. Maintenance**

- a. When needed, wash the fall protection equipment in warm water using a mild detergent. Rinse thoroughly in clean warm water and allow drying at room temperature. Never use high pressure washers on equipment components, which may drive contaminants deeper into fabric materials. Besides regularly scheduled inspections, many components used as part of fall protection systems will require defined manufacturer inspections. When in doubt, check with the manufacturer recommendations or specifications

**Procedure (con't)**

**6. Storage**

- a. All fall protection components should be stored in a clean area away from strong sunlight and extreme temperatures which could degrade materials. Check manufacturer's recommendations or specifications for specific storage requirements

**7. System Types**

- a. While there are multiple types of systems and applications, fall protection is most easily classified as belonging to 1 of 2 groups, passive or active.
- b. Passive Systems
  - i. There are two kinds of passive systems; control zones and guardrails. Both of these are intended to protect workers by keeping them away from the falling edge, catching them in the event of a fall, or preventing contact with lower surfaces below
  - ii. These passive systems allow workers the ability to perform their work unencumbered by the wearing of fall protection equipment. When properly designed and constructed these systems will protect workers 100% of the time
- c. Active Systems
  - i. i) These systems are personal fall arrest systems that stop a worker in a fall from a working height. While these systems limit the workers' freedom of movement while performing their jobs, these systems are also designed to limit both the distance fallen and the amount of injury incurred. These systems can be applied to many situations but are generally referred to as belonging to one of three types:
    - a. Horizontal Systems
    - b. Restraint Systems
    - c. Vertical Systems
- d. Temporary and permanent horizontal lifeline systems are engineered systems which allow workers mobility along a working surface. These systems must be designed, installed and used in accordance with the manufacturers or professional engineers' specifications. These instructions will indicate the intended application, operation, use, training and inspection requirements
- e. Restraint systems prevent workers from travelling to an edge or position where a fall could occur. These systems can be anchored using anchor plates or may be used in conjunction with horizontal systems to limit horizontal movement to a given distance
- f. Vertical systems are typically assembled by the end-user. Accessory component selection for vertical systems may remain similar to that of horizontal systems; however, component selection for vertical systems must be determined in conjunction with total fall distance and fall clearance requirements. This determination is entirely the responsibility of the end-user. End-users must also remain aware of methods by which they might reduce those forces, primarily by limiting their falling distance and/or by selecting a higher anchor point. Regardless of the active system type selected, end users should remain aware of the forces applied to their bodies in the event of a fall.

**8. Components**

- a. Atlantic Roofer Limited and North Shore Roofing employees must follow the hazard assessment and fall protection planning process prior to selection of either the fall protection system type or accessory components. Should Atlantic Roofer Limited's COP and accessory procedures such as maintenance, inspection and disposal be more defined in their application than their vendors or clients, the Atlantic Roofers Limited's will take precedence

**Procedure (con't)**

**8. Components (con't)**

b. Components of any active fall protection system will always include the following:

- i. Anchors or anchorage system
- ii. Connecting components
- iii. A body holding device
- iv. A fall protection plan

**c. Anchors**

- i. Anchors are the foundation of any active fall protection system. Workers must be able to recognize what can be used as an anchor or anchorage point of attachment. Presently in Canada, there is no CSA guideline on anchors or anchorages. However there is an American National Standards Institute (ANSI 359.1) guideline which industry presently relies on
- ii. While the ideal anchor strength is 22 kN (5000 lbs) per attached worker, determining that a given point has the capability sought remains a subjective decision. If designated and marked anchor points are not available, workers must have enough training to properly select safe anchor points. OH&S regulations generally detail varying anchor strength requirements that must be adhered to if at all possible

**d. Lanyards and Shock Absorbers/Energy Absorbers**

- i. Lanyards are a means of connecting components used to connect the worker via the full body harness to the anchorage point. Shock absorbers are designed to absorb the forces when a fall occurs. Not every system type will require the addition of a shock absorber but, where possible, Atlantis Roofers Limited employees should use systems that include them. Manufacturers provide various types, length and varieties of lanyards and shock absorbers. The decision to use one type or combination over other types will be dictated by availability as well as system type and requirements.
- ii. All lanyards and shock absorbers must be Canadian Standards Association (CSA) approved and bear marking that indicates the relevant standard. Their selection will be based on the work environment and the type of work being conducted. The following is a list of the different lanyard and shock absorber types:
  - a. Fibre-rope lanyards with and without shock absorbers
  - b. Wire rope lanyards with and without shock absorbers
  - c. Web lanyards with and without shock absorbers
  - d. Shock absorbing lanyards
  - e. Twin lanyards with permanently attached shock absorbers

**e. Descent Control Devices**

- i. Descent control devices allow a worker to be lowered or to move down a rope in a controlled fashion. These devices provide either automatic or manual controlled descent and are normally used for evacuation. All descent control devices must be Canadian Standards Association (CSA) approved and bear marking that indicates the relevant standard. The selection will be based on the work environment and the type of work being conducted. The following is a list of descent controllers types:
  - a. Automatic descent control for emergency purposes
  - b. Manual descent with automatic lock-off for emergency egress

**Procedure (con't)**

**8. Components (con't)**

**f. Self-Retracting Devices**

- i. Since self-retracting devices lock-up almost immediately, these devices greatly reduce free fall distances and the consequent forces applied to our bodies in the event of a fall. Their primary application is for vertical system use; however different manufacturer's do permit them to be used in horizontal applications. All self-retracting devices must be Canadian Standards Association (CSA) approved and bear marking that indicates the relevant standard. The selection will be based on the work environment and the type of work being conducted. The following is a list of self-retracting devices:
  - a. Type 1: Usually shorter in length, 1.5 - 3.0 metres (5 -10 ft). These must be removed immediately from service after a fall.
  - b. Type 2: For use over 3 metres (10 ft), These must be removed from service and returned to the manufacturer for repair after a fall if the visual load indicator is deployed.
  - c. Type 3: These devices have a built-in retrieval capability and must also be removed from service and returned to the manufacturer for repair after a fall if the visual load indicator is deployed.

**g. Fall Arresters (Rope or Cable Grabs)**

- i. Fall arresters are devices that can be moved along a rope, cable or rail and that lock (grab) in the event of a fall. Some arresters are entirely automatic while others are manually controlled. All arresters are predominantly designed to be used in vertical systems.
- ii. Their primary application is for vertical system use; however, different manufacturer's do permit them to be used in horizontal applications. All fall arresters (Rope Grabs) must be Canadian Standards Association (CSA) approved and bear markings that indicate the relevant standard. The selection will be based on the work environment and the type of work being conducted. The following is a list of fall arrester types:
  - a. Class AD: Automatic Dorsal, rear attachment, moves automatically.
  - b. Class AS: Automatic Sternal, frontal attachment, moves automatically.
  - c. Class ADP: Automatic Dorsal panic, rear attachment, arrests even when grabbed in a panic-like situation.
  - d. Class MDP: Manual Dorsal Panic, rear attachment, must be deliberately moved along the lifeline.

**h. Full Body Harness (body holding device)**

- i. Atlantic Roofer Limited's employees are responsible for determining the type of personal fall protection harness required. All harnesses must be Canadian Standards Association (CSA) approved and bear marking that indicates this clearly relevant standard. The selection will be based on the work environment and the type of work being conducted. The following is a list of harness types typically used:
  - a. Fall Arresting Single D-ring located on the upper spine between shoulder blades. (CSA Type "A")
  - b. Ladder Climbing Additional D-rings on the front of the harness allowing for attachment to the ladder system. (CSA Type "L")

**9. Hazard Assessment Process**

- a. a) Pre-work hazard assessments are required by regulatory bodies and Atlantic Roofers Limited safety standards. Workers must conduct hazard assessments to identify existing or potential hazards before starting work on any Atlantic Roofers Limited worksite

**Procedure (con't)**

**9. Components (con't)**

- b. A thorough and documented worksite hazard assessment must be completed where working at heights is required. All workers should be involved in the assessment process whenever possible. Once this hazard assessment is complete then appropriate controls must be employed, chosen on the merit of their effectiveness, to eliminate or control the hazard(s) identified. These controls are commonly referred to as the hierarchy of hazard control, meaning there is a best or first choice as well as a last resort choice. The following list gives control methods in order of preference.
  - i. Engineering: These controls change the environment to reduce or eliminate the hazard.
  - ii. Administrative: These controls communicate hazards and/or change the way in which the work is performed.
  - iii. Personal Protective Equipment (PPE): These controls apply changes to the worker, but do nothing to reduce the hazard.
  - iv. Active fall protection systems (PPE) are systems that are used as a last resort when engineering controls are not viable or practicable.

**10. Fall Protection Planning**

- a. a) Fall protection planning starts with competent training. Workers must be adequately qualified and informed as to the fall protection systems and components available to them when working at heights. Competent training, including the use of a comprehensive approach to system and component selection, will ensure that all Atlantic Roofer Limited personnel complete a fall protection plan prior to the start of any work where the uses of fall protection systems and/or components are required. When having to use fall protection systems in a working alone environment, the fall protection planning must ensure that another worker is on site to perform a rescue if required, before the work activities are started. The components within the fall protection plan must include, at a minimum, the following items:
  - i. Hazard Identification
  - ii. Fall Protection System
  - iii. Fall Protection Components
  - iv. Rescue/Response Plan

\* Refer to “Fall Protection Plan Form” – Form “F-02-2”

**11. General Rescue Procedures**

- a. a) In the event of an injury, or in the event that an employee performing works at heights greater than 3 metres requires assistance, the following emergency rescue procedures will be used:
  - i. Have someone notify emergency rescue personnel immediately BY DIALING 911 OR OTHER EMERGENCY NUMBER DESIGNATED AT THE FACILITY.
  - ii. Commence rescue activities by choosing the most suitable of the following methods:
    - a. Self-Rescue
    - b. Assisted Self-Rescue
    - c. Mechanically Aided Rescue
    - d. Rescue Pick-off
  - iii. After rescue is affected, move the employee away from the space, and administer First Aid / CPR, as appropriate and wait for Emergency Services. Note: Specific rescue procedures may have to be developed for each activity or task requiring the use of fall protection systems.

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

 Branch Manager  
 North Shore Roofing

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker.

Hazards Present		
● Serious Injury	● Death	
Protective Mechanisms		
● PPE	● Manufacturers Recommendations	● Training/Supervision
Equipment / Tools Required		
● Full Body Harness	● Energy Absorbing Lanyard/	● Labels
● Anchor Point that can withstand 5000 lbs.	● Self-Retracting Lanyard	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>● DO inspect all equipment before each use</li> <li>● Do remove from service if used in a fall</li> <li>● DO read and understand manufacturer’s instructions</li> <li>● DO ensure anchorage points are rigid</li> <li>● DO use caution around moving machinery, electrical hazards, chemical hazards and sharp edges</li> <li>● DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use if subjected to fall arrest forces</li> <li>● DO NOT install or use if you have not been trained in its correct application and use</li> <li>● DO NOT use if there is a reason to doubt your fitness to absorb the impact from a fall arrest</li> <li>● DO NOT store in direct sunlight. Avoid areas where chemical vapors are present</li> <li>● DO NOT use non-locking connectors with this system</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Identification of Fall Hazards</b> <ol style="list-style-type: none"> <li>a. Workers must determine if he/she will be exposed to the hazard of falling from an unguarded work area that is:               <ol style="list-style-type: none"> <li>i. 3 meters (10 ft.) or more above water or the nearest safe level</li> <li>ii. Above any surface or object that could cause injury to the employee upon contact</li> <li>iii. Above any open top tank, bin, hopper or vat</li> </ol> </li> </ol> </li> <li>2. <b>Hazard Assessment</b> <ol style="list-style-type: none"> <li>a. Following the Job Procedure for Hazard Assessment, inspect the worksite areas for possible fall hazards</li> <li>b. Record each hazard on the appropriate Hazard Assessment Form</li> <li>c. Rate the hazards for their severity levels</li> <li>d. Choose the appropriate method of Fall Protection to eliminate the chance of a fall</li> <li>e. Have an initial site meeting prior to employees performing any site work to make known and discuss hazards, controls in place and rescue plan in the event of a fall</li> </ol> </li> </ol>
--

**Procedure (con't)**

**3. Rescue Plan**

- a. Formulate a rescue plan for the type of situation, work area access, hazards involved
- b. Record Rescue Plan on appropriate Form
- c. Discuss Rescue Plan with all site employees and keep in a prominent place to be available at all times
- d. Where possible, the fallen worker can self-rescue
- e. Call 911, the local fire department, emergency response services and respective supervisor
- f. Advise the suspended worker to lift their knees into a sitting position
- g. Suspension relief straps may be used to take weight off the harness to relieve stress on the worker's body
- h. Do not allow the rescued worker to lie down in a horizontal position
- i. First aid attendant should administer on-site first aid as required
- j. The fallen worker should seek appropriate medical attention

**4. Fall arrest System**

- a. Guardrails shall be used for fall protection whenever practicable
- b. Use of travel restraints or fall arrest equipment shall be used when guardrails cannot provide sufficient protection
- c. Determine and assemble the necessary components
- d. Ensure that the harness is adjusted to fit properly and is rated for your weight
- e. A full body harness and an Energy Absorbing Lanyard OR Self-Retracting Lanyard must be secured to an anchorage point
- f. Atlantic Roofers Limited/North Shore Roofing employees must adhere to client fall protection requirements if they exceed the legislated standard. If a guardrail system is not available, a fall arrest or travel restraint system must be used. The standard height at which fall protection is required in Canada is 10 ft (3 m). However, some clients follow the more stringent US OSHA standard. In the Construction Industry, employees must use fall protection on a walking or working surface with an unprotected side/edge which is 6 ft (1.8 m) or more above a lower level (OSHA 1926.501b). In General Industry, fall protection for wall openings and holes must be used at a height of 4 ft (1.2 m) (OSHA 1910.23b)

**5. Determine Anchor Point**

- a. Consider all possible paths of user movement and all factors that could affect the user's safety before, during and after a fall
- b. Select anchorages that are stable and have the strength required (5000 lbs.)
- c. Carefully select the locations of the anchorages to:
  - i. Reduce possible free fall distance
  - ii. Prevent swing fall hazards
  - iii. Provide clear space in the potential fall paths to avoid striking an object
- d. Do not select anchorage locations that will require the user to work above the anchor as this will increase the potential free fall and total fall distance
- e. Potential free fall distances must not exceed 1.8 m (6 ft.)

**6. Calculate Fall Distance (See Figure 1)**

- a. Calculate the total fall distance and ensure that an adequate clearance distance is available.
- b. When fall clearance is under 5.6 m (18 ½ ft.), an alternative solution such as a shorter lanyard length, or a different connecting device such as a self-retracting lanyard or fall limiter, is needed to reduce the total fall distance

**Note:** Never tie a knot in a lanyard to make it shorter, as it reduces the strength by 50%. Instead, use an adjustable lanyard and adjust it to proper working length

**Procedure (con't)**

**Figure 1**  
Typical calculation using a 6 ft lanyard

**7. Swing Falls (Figure 2)**

- a. Minimize swing falls by working as directly below the anchorage point as possible
- b. Make certain that enough clearance is available in all potential fall paths to prevent striking an object

Figure 2

**8. Inspection**

- a. All components must be visually inspected before each use
- b. See Job Procedure “Fall Protection – Inspection of Equipment”
- c. Remove from service if equipment has been used in a fall
- d. Defective components are not to be used

**9. Maintenance & Storage**

- a. Wipe off all surface dirt with a sponge and a solution of water and mild soap
- b. Rinse the webbing in clean water, dry with a cloth and hang to dry
- c. Store equipment in a clean, dry area that is free of fumes, excessive heat and direct sunlight

**References:** Form F-02-2 Fall Protection Plan

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. The appropriate regulations and statutes should always be consulted and adhered to. Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker.

Hazards Present		
• Serious Injury	• Death	
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training/Supervision
Equipment / Tools Required		
• Full Body Harness	• Energy Absorbing Lanyard/ Self-Retracting Lanyard	• Labels
• Roof Post	• 16 - 45lb Plates	• Base & D Ring

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>• DO inspect all equipment before each use</li> <li>• Do remove from service if used in a fall</li> <li>• DO read and understand manufacturer’s instructions</li> <li>• DO ensure anchorage points are rigid</li> <li>• DO use caution around moving machinery, electrical hazards, chemical hazards and sharp edges</li> <li>• DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT alter or intentionally misuse equipment</li> <li>• DO NOT use if subjected to fall arrest forces</li> <li>• DO NOT install or use if you have not been trained in its correct application and use</li> <li>• DO NOT use if there is a reason to doubt your fitness to absorb the impact from a fall arrest</li> <li>• DO NOT store in direct sunlight. Avoid areas where chemical vapors are present</li> <li>• DO NOT use non-locking connectors with this system</li> </ul>
---	--

**Procedure**

- 1. Conduct a pre-starting inspection of equipment and work area**
  - a. Check each component for defective or missing parts
  - b. Inspect the roof area for trip hazards, openings, electrical hazards, etc
  - c. Guardrail System shall be secured around any roof openings or hazards
- 2. Hoist the Weighted Anchor System to Roof**
  - a. This system is designed to break down into component parts allowing one person to take the system up to the roof in an elevator and assemble it on the roof. OR
  - b. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight
  - c. Identify appropriate setup area on the roof
  - d. Make sure everyone on the ground is completely clear of the hoisting area.
  - e. Ensure appropriate number of personnel are available for the task.
  - f. Consult your “Hoisting” Job Procedure for complete hoisting procedures before proceeding to crane or hoist the guardrail system

### Procedure (con't)

3. **Limitations:** The following limits apply to the installation and use of Evolution Counterweight System. Other limitations may apply:
  - a. **Horizontal Lifeline:** The Evolution Counterweight System is not rated for use as an anchor for a horizontal lifeline
  - b. **System Capacity:** The maximum capacity of the Evolution Counterweight System is one person with a maximum combined weight including tools and clothing, of 310 lbs. (141 kg)
  - c. **Roof Types:** The Evolution Counterweight System is approved for use on the following types of roofs: concrete, single ply membrane, bitumen membrane, asphalt sanded, and asphalt stone chippings. If you want to use the system on any other type of roofing surface, contact DBI-SALA for further recommendations
  - d. **Roof Load:** The roof must be able to support a static load of 720 lbs.
  - e. **Structure Load:** The structure supporting these anchorage points must be rigid, flat pitch, and capable of supporting at least 5,000 lbs. (22.2 kN) in the direction of potential fall arrest
  - f. **Roof Conditions:** The Evolution Counterweight Anchor System must not be used in adverse weather conditions. The roof surface must be free of frost, snow, standing water, grease or oil, or any other type of lubricating or friction reducing materials
  - g. **Environmental Hazards:** Use of this equipment in areas where environmental hazards exist may require additional precautions be taken to reduce the possibility of injury to the user or damage to the equipment. Hazards may include, but are not limited to: high heat, extreme cold, caustic chemicals, corrosive environments, high voltage power lines, explosive or toxic gases, moving machinery, or sharp edges. Contact DBI-SALA if you have questions about using this equipment where environmental hazards exist
4. **Making Connections**
  - a. a) Only use self-locking snap hooks and carabiners with this equipment. Only use connectors that are suitable to each application. Ensure all connections are compatible in size, shape and strength. Do not use equipment that is not compatible. Ensure all connectors are fully closed and locked
5. **Before Use**
  - a. Do not alter or intentionally misuse this equipment. Consult with DBI-SALA if using this equipment in combination with components or subsystems other than those described in this manual. Some subsystems and components combinations may interfere with the proper operation of this equipment. Use caution when using this equipment around moving machinery, electrical and chemical hazards, and sharp edges
  - b. **Before Each Use:** inspect this equipment according to steps listed in section 5.3. Do not use this equipment if inspection reveals an unsafe or defective condition
  - c. Read and understand all manufacturer's instructions for each component of the personal fall arrest system
  - d. **Other Considerations:**
    - i. Place the Counterweight System at least 8 ft (2.5 m) away from any edge or opening
    - ii. Personal fall arrest systems must be rigged to limit any free fall to a maximum of 6 ft. (1.8 m)
    - iii. Avoid working above your anchorage level since an increased free fall distance will result
    - iv. Avoid working where your line may cross or tangle with that of another worker or another object
    - v. Do not allow the lifeline to pass under arms or between legs
    - vi. Never clamp, knot or otherwise prevent the lifeline from retracting or being taut, avoid slack lines
  - e. Swing falls occur when the anchorage point is not directly above the point where a fall occurs. The force of striking an object while swinging (horizontal speed of the user due to the pendulum affect) can be great and may cause serious injury. Swing falls can be minimized by working as close to the anchorage point as possible. In a swing fall situation, the total vertical fall distance of the user will be greater than if the user had fallen vertically directly below the anchorage point. The user must therefore account for an increase in the total free fall distance and the area needed to safely arrest the fall. See Figure 2

Figure 2

**Procedure (con't)**

**6. System Assembly**

- a. Sweep the installation area free of loose materials, then layout four rubberized plates on a flat surface and Insert the “L” Bolts into the raised slots. Alternate the direction of each L-bolt. See Figure 3, and 4
- b. Install the LEAP Anchor to ensure the L-bolts are oriented correctly and the D-ring on the LEAP Anchor will face the desired direction when installation is complete. See Figure 5 .
- c. Remove the LEAP Anchor and begin to assemble the counterweights onto the base plates, with the L-bolt protruding through the matching hole. For concrete, single-ply membrane, and bitumen membrane, stack three counterweights on each base plate. For asphalt sanded and asphalt stone chippings, stack four counterweights on each base plate. See Figure 6.
- d. Assemble the LEAP Anchor onto the L-bolts and counterweights. Make sure each bolt passes through one of the 1/2 in. diameter mounting holes in the base plate of the LEAP Anchor. See Figure 6.
- e. Assemble one more layer of counterweights over the LEAP Anchor base, then apply a washer and nut to each of the Lbolts. Hand tighten all four nuts snugly. See Figure 7.

Figure 3

Figure 4

Figure 5

Figure 6

Figure 7

**Procedure (con't)**

**7. Connecting to the Leap Anchor**

- a. Figure 8 illustrates the proper connection of typical fall arrest equipment to the LEAP anchor. Always protect the lifeline from abrading against sharp or abrasive surfaces on the roof. Make sure all the connections are compatible in size, shape and strength
- b. Never connect more than one personal protective system to any single LEAP anchor at a time
- c. SRL: Connection to the installed LEAP anchor may be made by attaching the self locking snap hook at the end of the SRL lifeline to the back dorsal D-ring (fall arrest attachment point) of the user’s body support (i.e. full body harness). When connecting, make sure the connections are fully closed and locked.

Figure 8

**8. Training**

- a. It is the responsibility of all users of this equipment to understand these instructions, and are trained in the correct installation, use, and maintenance of this equipment. These individuals must be aware of the consequences of improper installation or use of this equipment

**9. Inspection**

- a. **Before Each Installation:** Inspect the counterweight components, and other system components according to these or other manufacturer’s instructions. System components must be formally inspected by a qualified person (other than the user) at least annually. Formal inspections should concentrate on visible signs of deterioration or damage to the system components. Items found to be defective must be replaced. Do not use components if inspection reveals an unsafe or defective condition
  - i. Check the base plates for excessive dents or deformations. Make sure the counterweights will lay flat on the base plates. Check the base plates for delamination of the rubber coating. If the coating has loose edges that may catch or double back on itself, the base plate should be replaced
  - ii. Inspect the LEAP Anchor for physical damage. Look carefully for any signs of cracks, dents or deformities in the metal. If the anchor has been subjected to fall arrest forces the upright cylinder will be tipped over to one side. Do not use an anchor that has been subjected to fall arrest forces
  - iii. Inspect the LEAP Anchor for signs of excessive corrosion
  - iv. Ensure the condition of the roof will support the LEAP Anchor loads
  - v. If inspection reveals an unsafe or defective condition, remove the unit from service and destroy, or contact DBI-SALA for possible repair.

**10. Maintenance, Service, Storage**

- a. The Evolution Counterweight System components require no scheduled maintenance, other than repair or replacement of items found defective during inspection. See section 5.0. If components become heavily soiled with grease, paint, or other substances, clean with appropriate cleaning solutions. Do not use caustic chemicals that could damage system components

**Procedure (con't)**

**10. Maintenance, Service, Storage (con't)**

**General**

Horizontal Lifeline Systems, also known as HLL systems, are utilized in many of the fall arrest and fall restraint systems given great utility and flexibility. Horizontal lifeline systems are common in work areas lacking overhead anchor points available for personnel tie-off. The fall restraint and fall arrest properties of horizontal lifelines make the HLL an integral part of many fall protection systems.

Purpose		
• Fall (Travel) Restraint	• Fall Arrest	
Hazards Present		
• Serious Injury	• Death	
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training/Supervision
Equipment / Tools Required		
• Tie-off Adapter • Attachment O Ring (for user lanyard) • Full Body Harness	• In-line Energy Absorber • Labels • Energy Absorbing Lanyard/ Self-Retracting Lanyard	• Rope Tensioner • Snap Hook • Portable Anchor (if required)

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>• DO inspect all equipment before each use</li> <li>• DO remove from service if used in a fall</li> <li>• DO read and understand manufacturer’s instructions</li> <li>• DO ensure anchorage points are rigid</li> <li>• DO use caution around moving machinery, electrical hazards, chemical hazards and sharp edges</li> <li>• DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT alter or intentionally misuse equipment</li> <li>• DO NOT use if subjected to fall arrest forces</li> <li>• DO NOT install or use if you have not been trained in its correct application and use</li> <li>• DO NOT use if there is a reason to doubt your fitness to absorb the impact from a fall arrest</li> <li>• DO NOT store in direct sunlight. Avoid areas where chemical vapors are present</li> <li>• DO NOT use non-locking connectors with this system</li> </ul>
---	--

**Equipment Requirements**

**1. System Connectors**

- a. Connectors used to attach to the attachment O-ring on the horizontal lifeline (hooks, carabiners, D-rings) must support at least 2268 Kg (5,000 lbs.)
- b. Connectors and attachment elements must be compatible in size, shape, and strength. Non-compatible connectors may unintentionally disengage (roll-out)
- c. Do not use non-locking connectors with this system

**2. Anchorage Connectors**

- a. Connectors used to attach the horizontal lifeline to end anchors must be compatible with the connection point
- b. The connection, with connecting elements, must be capable of sustaining a 2268 Kg (5,000 lbs.) load without failure

**3. Structure Load**

- a. Structural anchorage points must be rigid, and capable of supporting at least 1633 Kg (3,600 lbs.) along the axis of the horizontal lifeline

**4. Connecting Subsystem**

- a. The connecting subsystem is the portion of the personal fall arrest system that connects the horizontal lifeline subsystem and harness fall arrest attachment element
- b. The connecting subsystem must limit forces applied to the horizontal lifeline to 408 Kg (900 lbs.) or less

**Limitations**

**5. Horizontal Lifeline Span (Pre-Engineered)**

- a. The maximum span distance is 30 meters (100 feet)
- b. The span length must be reduced when clearance is limited

**6. System Capacity**

- a. The maximum capacity of the pre-engineered horizontal lifeline is two (2) persons. The maximum weight of each person, including tools and clothing is 141 Kg (310 lbs)

**7. Free Fall (Figure 2)**

- a. Rig and use the personal fall arrest system such that the maximum potential free fall does not exceed 1.8 meters (6 feet)

**8. Swing Down / Swing Back (Figure 3 & 4)**

- a. Swing downs occur if the lanyard slides back along the perimeter edge of the roof until it is vertical. When this happens, the person may hit the ground, or the lanyard may break as a result of its contact with the edge of the roof
- b. Measures to address “swing down” include:
  - i. The installation of guard rails
  - ii. Placing the anchorage point at a right angle to the position of the lanyard at the perimeter edge (for example, by using a mobile anchorage)
  - iii. The installation of a second anchorage point and belay devices (intermediate anchorages)

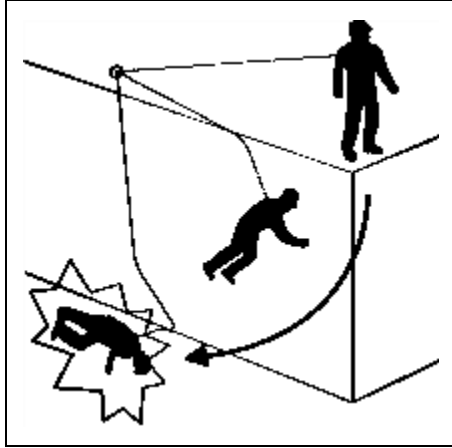

Figure 2

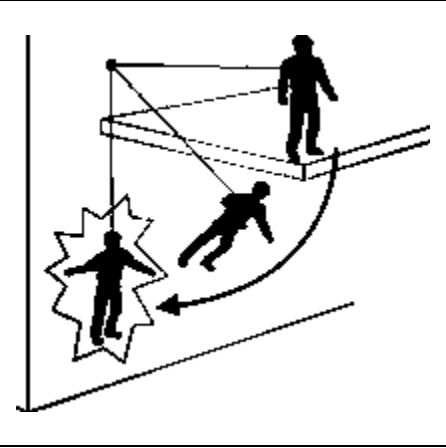

**Limitations (con't)**

Figure 3

During “swing down” the length of the lanyard and positioning of the anchor allow contact with the ground.

Figure 4

During “swing back” the length of the lanyard and positioning of the anchor contact may allow the worker to hit the structure.

**9. Body Support**

- a. A full body harness must be used

**Procedure for Use**

**10. Before Each Use**

- a. Inspect all equipment
- b. Do not use equipment if inspection reveals an unsafe or defective condition
- c. Read and understand manufacturer’s instructions for all components

**11. System Installation**

- a. Figure 1 shows a typical horizontal lifeline installation.
- b. When using an **energy absorbing** lanyard to connect to the system:
  - i. The end anchorages must be located at a height which will limit the free fall to 1.8 meters (6 feet)
- c. When using a **self-retracting lifeline (SRL)** to connect to the system:
  - i. The end anchorages must be located above the user.
  - ii. The SRL, when fully retracted, must be above the harness attachment level.
- d. The horizontal lifeline should be positioned at a level that will minimize free fall while allowing ease of use
- e. The horizontal lifeline should be positioned near the work location to minimize swing-down hazards
- f. The connecting subsystem length should be kept as short as possible to reduce the potential free fall and required clearance distance
- g. Both anchorages must be installed at approximately the same height, so that the horizontal lifeline is not sloped more than 5 degrees

**12. Determine location of end anchorages**

- a. Determine the span length
- b. Evaluate the required clearance

**Procedure for Use (con't)**

**13. Install the anchorage connectors**

- a. To ensure the tie-off adaptor does not slide down a vertical or sloped anchorage, the tie-off adaptor must be wrapped twice around the structure

**14. Secure the Horizontal Lifeline**

- a. Secure each end of the Horizontal Lifeline (HLL) to the anchorage connectors with the snap hook or carabiner
- b. Loosen and reposition the rope tensioner as required

**15. Remove Slack from HLL (Figure 5)**

- a. Pull the rope through the tensioner by hand
- b. To tension the HLL, using a pointed bar or a 1 1/8" wrench, turn tensioning nut clockwise until tensioning is no longer possible
- c. Do not modify the rope tensioner to achieve greater lifeline tension
- d. The final tension will be 136 to 204 Kg (300 to 450 lbs)

Figure 5

**16. Connecting to the HLL System**

- a. Inspect and put on your full body harness
- b. Attach the lanyard to the back D ring (dorsal connection) on the harness
- c. Approach the work area using the appropriate access equipment
- d. Connect the free end of your lanyard to one of the attachment O rings on the horizontal lifeline

**System Removal**

**17. Release Tension on the HLL (Figure 6)**

- a. Lift the locking lever and position the pointed bar under the locking device
- b. Push the pointed bar in an upward motion to unlock the lever
- c. Loosen the tensioning nut by inserting the pointed bar through the hole in the nut (or use a 1 1/8" wrench) and turn the tensioning nut counter clockwise
- d. Remove all knots and kinks in the rope before storage

Figure 6

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker.

<b>Hazards Present</b>		
● Serious Injury	● Death	
<b>Protective Mechanisms</b>		
● PPE	● Manufacturers Recommendations	● Training/Supervision
<b>Equipment / Tools Required</b>		
● Crane and/or Hoist	● Rigging Equipment	● Warning Signs/Tape or Barricades
● Railguard 200 Rail Sections	● Railguard 200 Base Plates c/w Lockpins	● Two Wheel Transport Buggy

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>● DO inspect all equipment before each use</li> <li>● Do remove from service if defects are found</li> <li>● DO read and understand manufacturer’s instructions</li> <li>● DO ensure you tie off when installing the guardrails</li> <li>● DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>● DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use if defects are found</li> <li>● DO NOT install or use if you have not been trained in its correct application and use</li> <li>● DO NOT use weighted bases within 6 feet along the edge of roof if roof surface is slippery</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>a. Check each component for defective or missing parts</li> <li>b. Inspect the roof area for trip hazards, openings, electrical hazards, etc</li> <li>c. All personnel on the roof shall use appropriate fall protection equipment until Guardrail System is securely in place</li> </ol> </li> <li>2. <b>Hoist Rail System to Roof</b> <ol style="list-style-type: none"> <li>a. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight</li> <li>b. Identify appropriate laydown areas on the roof</li> <li>c. Make sure everyone on the ground is completely clear of the hoisting area</li> <li>d. Ensure appropriate number of personnel are available for the task</li> <li>e. Consult your “Hoisting” Job Procedure for complete hoisting procedures before proceeding to crane or hoist the guardrail system</li> </ol> </li> <li>3. <b>Roof Preparation</b> <ol style="list-style-type: none"> <li>a. Clean surfaces thoroughly by removing stones and debris where Base Plates will be located</li> <li>b. Make sure roof surface is non-slippery</li> </ol> </li> </ol>
---

**Procedure (con't)**

**4. Assemble Rail System on Roof (Figure 1)**

- a. Assemble Railguard System at least 1 meter (3 ft) from the edge of the roof or opening
- b. Position base plate and insert railing
- c. Insert locking pins. Make sure the clip is in the “Lock” position
- d. If required, insert optional steel speed boards and secure with pins. This would be used where there is a danger of falling materials onto someone below
- e. Use an “outrigger” section at any interruption in continuous railing sections. Outrigger assembly consists of a 1.52m (5 ft) railing with base plate pinned to railing and placed 90° away from danger side of continuous railing
- f. Using transporter buggy, lift base plates one-by-one and gradually move assembled rail sections into position at the edge of the roof or opening
- g. Ensure that no portion of the base plate extends beyond the safe work surface of the roof

Figure 1

- A. 5' Outrigger System (only used on very ends of run)
- B. Danger Side Railings (use as many as required)
- C. Extra Base Plate
- D. Quick Pin
- E. Optional 2"x4" Toeboards or Speed Boards

**5. Guard Rail and Clamp System**

- a. Refer to the following diagram to use the clamp system (Page 3)

**6. Disassembly of Railguard System**

- a. Reverse procedure to remove system

**7. Care and Maintenance**

- a. Touch-up, repair or replace damaged parts

**Clamp use Diagram**

Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker. This process will restrict the exposure of workers to open edge hazards by utilizing a work positioning/motion stopping system to limit the travel radius of the attached worker.

Hazards Present		
● Serious Injury	● Death	
Protective Mechanisms		
● PPE	● Manufacturers Recommendations	● Training/Supervision
Equipment / Tools Required		
● Crane and/or Hoist	● Rigging Equipment	● Warning Signs/Tape or Barricades
● Railguard 200 Rail Components	● Fall Restraint Component Labels	● Two Wheel Transport Buggy
● Full Body Harness	● Energy Absorbing Lanyard/ Self-Retracting Lanyard	● 2” Opening Snap Hook

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>● DO inspect all equipment before each use</li> <li>● DO remove from service if defects are found</li> <li>● DO read and understand manufacturer’s instructions</li> <li>● DO ensure you tie off when installing the guardrails</li> <li>● DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>● DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use if defects are found</li> <li>● DO NOT install or use if you have not been trained in its correct application and use</li> <li>● DO NOT use if subjected to fall arrest forces</li> <li>● DO NOT store in direct sunlight. Avoid areas where chemical vapors are present</li> <li>● DO NOT use non-locking connectors with this system</li> </ul>
---	--

**Procedure**

**Note:** This system shall only be considered when other systems of fall protection are not available, impractical to use, or suitable anchorage is not readily accessible.

1. **Conduct a pre-starting inspection of equipment and work area**
  - a. Check each component for defective or missing parts
  - b. Inspect the roof area for trip hazards, openings, electrical hazards, etc
  - c. All personnel on the roof shall use appropriate fall arrest equipment until Guardrail System is securely in place
2. **Hoist Rail System to Roof**
  - a. Refer to Job Procedure # 16 for full procedure on Rail Guard 200 Installation

**Procedure (con't)**

**3. Assemble Rail System on Roof**

- a. Refer to Job Procedure # 16 for full procedure on Rail Guard 200 Installation
- b. Calculate the distance the Rail system must be from the edge for the initial rigging of this positioning system to eliminate fall distance exposure without unduly restricting the user's ability to perform their work
- c. Measure the distance required from the edge and clearly mark the roof surface to identify the location of the base units on repositioning
- d. It is recommended that the rail sections be located a minimum of 5'7" from the open edge. This would accommodate a 4'6" lanyard
- e. The system must be appropriately positioned in consideration of the personal fall protection system components
- f. Working from the protected side of the Rail system, use a transporter cart to lift each base unit (one by one) and position them into the pre marked locations
- g. On completion, ensure the distance to the edge is constant along any continuous runs of the Rail system by using a tape measure to confirm each rail section is the same distance from the edge.
- h. The area established between the rail system and the open edge will hence be called the **Controlled Access Zone (CAZ)**

**4. Entering the CAZ (Controlled Access Zone)**

- a. There must be a **Safety Monitor** in which a trained worker is designated to monitor work activities in the control zone to ensure that work is done in a manner that minimizes the potential for a worker to fall
- b. Foreman will select **no more than 8 workers** that are to enter the CAZ
- c. Before entering, selected workers shall connect the lanyard to the dorsal ring of their harness and connect the 2" Snap Hook to the **middle horizontal rail** of the Railguard system. The 10' long middle rail was tested and found to be able to resist a force of 500 lbs. (HITE Engineering Corporation)
- d. Selected workers will enter through the rail system or at an end. This point of entry must be more than 1 meter (3 ft) from the open edge

**5. Working in the CAZ (Controlled Access Zone)**

- a. Worker(s) shall maintain the lowest center of gravity possible to further reduce any additional strain on the rigged system (Crouched down or on knees)
- b. When the user reaches a point that is 1 meter (3 ft) from the open edge they shall drop to a kneeling position and proceed in this manner to their working position
- c. The connecting lanyard must be taut and restrict the ability of the worker to fully access the fall hazard
- d. When fully extended in the system the worker should have "arms length" access to the open edge
- e. As the worker proceeds, on their knees, along the CAZ, the Lanyard should slide along the middle horizontal rail to allow the process to move without exposing the user to any swing fall hazards
- f. At each vertical post the user will follow this procedure:
  - i. Maintain their low body center of gravity while moving backward to the rail system.
  - ii. Maintain a grip on the top horizontal rail with one hand and use the free hand to shift the 2" snap hook from the horizontal middle rail on one rail section to the middle rail on the next rail section
- g. This procedure shall be repeated at each vertical post intersection along the rail system.

**Procedure (con't)**

**6. Movement or Defects in the Railguard System**

- a. The foreman shall also check the rail system for sufficiency, and warn the worker(s) of any failures or hazards within the system
- b. A failure occurs when the system moves at any point toward the CAZ
- c. At any indication of a system failure work is to cease and workers are to retreat to the protected side of the rail system

**7. Disassembling Rail System on Roof**

- a. Reverse steps 1 to 6

**8. Rescue Methods**

- a. In consideration of the assessment of the roof working surface as substantial and the intended use of a **motion stopping system**, the inevitability of a fall is not anticipated, however the removal of an injured person is considered and a procedure and communication issues will be addressed with Project management on a site to site basis
- b. Rescue /evacuation methods will be discussed with site workers prior to their commencement of work
- c. Professional Rescues teams (firefighters, municipal rescue teams, police) are the best resources and the availability of these services should be investigated in advance to confirm their ability to respond to a hazardous situation

**9. Investigations**

- a. All incidents involving a failure of this procedure/practice will be investigated
- b. The lead foreman shall complete a preliminary investigation report (PIR) and forward this report to the jurisdictional Branch Manager and the ARL Safety Coordinator within 24 hours of the incident
- c. A comprehensive investigation will be conducted by Atlantic Roofers Ltd. Safety Coordinator following receipt of the PIR

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker. This system will allow employees to work safely and control falling debris. This system will give you a strong, stable working platform without interfering with the roofing work.

Hazards Present		
● Serious Injury	● Death	
Protective Mechanisms		
● PPE	● Manufacturers Recommendations	● Training/Supervision
Equipment / Tools Required		
● Crane and/or Hoist	● Rigging Equipment	● Warning Signs/Tape or Barricades
● PR 2000 Components	● Fall Protection Component Labels	● 2” x 4” back rails & toe boards
● Full Body Harness	● Energy Absorbing Lanyard/Self-Retracting Lanyard	● 2” x 6” first staging

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>● DO inspect all equipment before each use</li> <li>● DO remove from service if defects are found</li> <li>● DO read and understand manufacturer’s instructions</li> <li>● DO use caution around moving machinery, electrical hazards and chemical hazards</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use if defects are found</li> <li>● DO NOT install or use if you have not been trained in its correct application and use</li> <li>● DO NOT throw or drop equipment or parts from a building or heights</li> <li>● DO NOT use equipment or parts if they have been exposed to extreme heat or cold. Avoid areas where chemical vapors are present.</li> </ul>
---	--

**Procedure**

**Note:**

- This system must be used in strict compliance with Provincial OHSA & Regulations.
- Maximum spacing of brackets and main frames is eight (8) feet.
- Brackets must be capable of supporting at least four (4) times the load that is likely to be on it. (The PR2000 Bracketed Scaffold was tested to 4700 lbs of downward load).

**1. Conduct a pre-starting inspection of equipment and work area**

- Inspect all Work Platform PR 2000 equipment and parts before and after each use to insure there is no damage or deformation to any of the equipment or parts
- Inspect to ensure there is no damage as a result of rust or corrosion. Discard if necessary
- Pay special attention in checking for splitting, cracking or deterioration of this equipment; if any, discard at once
- Inspect the roof area for trip hazards, openings, electrical hazards, etc
- All personnel on the roof shall use appropriate fall arrest equipment

**Procedure (con't)**

**2. Preparing to Install the PR 2000 Working Platform**

- a. When installing from a ladder, refer to Job Procedure “Ladders – Extension Ladder Set-up and Use”
- b. When installing from the roof, ensure anchor points are used with Fall Arrest System.

**3. Installation of PR 2000**

- a. Step 1
  - i. On re-roofs remove the old shakes or shingles to expose solid rafter (Figure 1)
  - ii. On new construction use exposed truss or rafter
- b. Step 2
  - i. i) Nail Rafter Bracket to solid rafter or truss using four (4) penny nails. (Figure 2)

Figure 1

Example of fastened Rafter Bracket and attachment of Main Frame and also showing 2 x 6 First Staging. Note how the PR 2000 does not interfere with the existing gutter.

Figure 2

- c. Step 3
  - i. Before installing Main Frame adjust and lock Adjustable Bar to accommodate soffit depth. (Figure 3)
  - ii. Protect wall surface at contact points as required.

Figure 3

- d. Step 4
  - i. Lift the Main Frame and fit into the Rafter Bracket.
  - ii. Note how the system does not interfere with the existing gutter or the fascia.

Figure 4

**Procedure (con't)**

**3. Installation of PR 2000 (con't)**

- e. Step 5
  - i. Measure approximately eight feet and repeat STEP 1 to STEP 4.
  - ii. Continue this procedure until the required number of units are installed.
  
- f. Step 6
  - i. Install planks – 2” x 4” back rails and toe boards. 2” x 6” first staging.

Figure 5

Figure 6

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Where there is a potential fall hazard, work must be carried out without undue risk to the worker. The PR 600 system was designed to be used on top of flat roofs and clamps to most standard utility carts.

Hazards Present		
● Serious Injury	● Death	
Protective Mechanisms		
● PPE	● Manufacturers Recommendations	● Training/Supervision
Equipment / Tools Required		
● Crane and/or Hoist	● Rigging Equipment	● Warning Signs/Tape or Barricades
● PR 600 Equipment	● Ballast Weight	● Utility Roof Cart
● Full Body Harness & Lanyard	● Lifeline	● Rope Grab

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>DO inspect all equipment before each use</li> <li>Do remove from service if defects are found</li> <li>DO read and understand manufacturer’s instructions</li> <li>DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO NOT alter or intentionally misuse equipment</li> <li>DO NOT use if defects are found</li> <li>DO NOT install or use if you have not been trained in its correct application and use</li> <li>DO NOT throw or drop any equipment from building or heights</li> <li>DO NOT use on solid ice</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>a. a) Check each component for defective or missing parts</li> <li>b. b) Inspect the roof area for trip hazards, openings, electrical hazards, etc</li> <li>c. c) Guardrail System shall be secured around any roof openings or hazards</li> </ol> </li> <li>2. <b>Hoist PR 600 System to Roof</b> <ol style="list-style-type: none"> <li>a. This system is designed to break down into component parts allowing one person to take the system up to the roof in an elevator and assemble it on the roof OR</li> <li>b. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight</li> <li>c. Identify appropriate setup area on the roof</li> <li>d. Make sure everyone on the ground is completely clear of the hoisting area</li> <li>e. Ensure appropriate number of personnel are available for the task</li> <li>f. Consult your “Hoisting” Job Procedure</li> </ol> </li> <li>3. <b>Assembly Instructions</b> <ol style="list-style-type: none"> <li>a. The utility cart must be positioned parallel to the leading edge with the pivot arms pointing toward the edge for Fall Arrest</li> <li>b. Place the base assembly onto the utility roof cart &amp; tighten down to the utility cart.</li> </ol> </li> </ol>
---

**Procedure (con't)**

**3. Assembly Instructions (con't)**

- c. Slide the extension arms into the base assembly, tighten down to secure the arms into place
- d. Ballast basket slides into the extension arms and is secured with tighteners to hold basket in place
- e. Insert the pivot arms onto opposite side of base assembly and insert joining bolts
- f. Place weight into Ballast Basket. The required amount of weight is 181 Kg (400 lbs.)

**4. Deck Instructions**

- a. The distance of the Pivot Points to the leading edge shall be no less than 4.6 meters (15 ft)
- b. The Ballast Basket is to be extended out to a distance of 2.8 meters (9 ft) from the Pivot Arms
- c. Turn the handle on the Wheel Jack to lift the Ballast Weight. This lowers the Pivot Points to touch onto the roof's deck, but not penetrating, setting the Fall Protection System in place
- d. Place the Wheel Lock in position locking front pivoting wheel into place but still allows the system to be pulled in a forward direction
- e. The Lifelines are then hooked up to the D-Ring Anchors located at the top of the Mast and rigged so that if a worker falls over the edge, the workers fall will be arrested not more than 0.6 meters (2 ft)
- f. If there is no existing roofing membrane then an Accessory Plate is bolted to the Pivot Arm Points and mechanically fastened to the roof deck with 4 – 1 cm x 5.1 cm (3/8 x 2") wedge anchor, embedded 3.8cm (1 1/2 inches) into concrete
- g. On wood decks where there is no existing membrane, turn the handle on the wheel jack to lift the Ballast Weight until the pivot points depress the wood
- h. On steel fluted decks, where the flutes run perpendicular to the leading edge, an accessory plate must be bolted to the pivot arm plates and accessory plate is fastened to the steel deck with a minimum 5/16 x 1 1/2" self-tapping sheet metal screw
- i. The PR 600 shall not be used for fall arrest on leading edge work where the parapet is higher than 0.7 meters (30 inches)

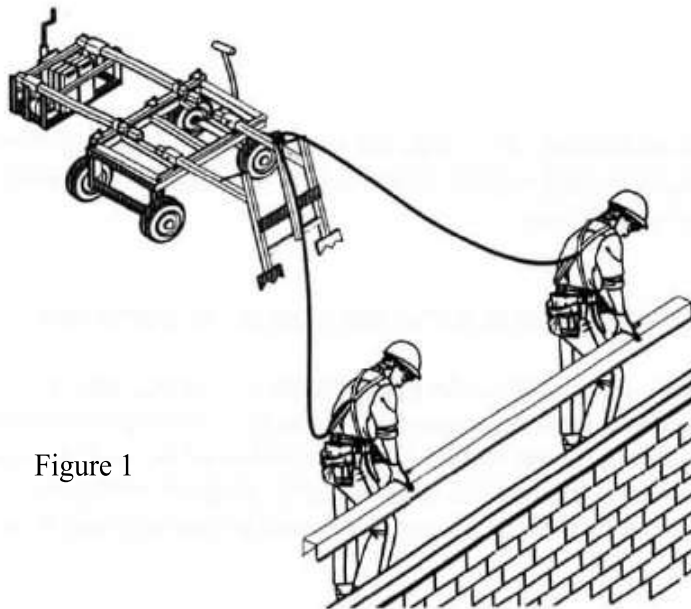

Figure 1

**Procedure (con't)**

**5. Moving the PR 600 System**

- a. Turn handle on Wheel Jack which lowers the Ballast Basket and in turn raises the Pivot Arms allowing the system to be easily pulled without damaging the roof
- b. Reset at new destination by raising the ballast and lowering the pivot arms

**6. # of Workers Rigged**

- a. No more than one (1) person can be rigged under Fall Arrest with a second person rigged as Travel Restraint (See Figure 2)
- b. Up to two (2) workers can be tied off to the same unit at the same time. If a worker falls over the edge, the lifeline will pull on top of the mast, pulling on the cross member that is welded to the pivot arms, pushing on the lower cross member, driving the pivot arm plates into the roofing membrane. This anchors the PR 600 system, creating a moment between the Pivot Arms and the Ballast Weight, thus arresting the workers fall

Figure 2

Fall Arrest – Utility Cart Parallel to Leading Edge

Pivot Points From Edge	Lifeline	Reach Along Leading Edge
20 ft.	22 ft.	25 ft.
25 ft.	27 ft.	30 ft.
30 ft.	32 ft.	32 ft.
35 ft.	37 ft.	35 ft.
40 ft.	42 ft.	40 ft.

Pivot Points From Edge	Travel Restraint Lifeline	Reach Along Leading Edge
20 ft.	19'- 6"	21 ft.
25 ft.	24'- 6"	24 ft.
30 ft.	29'- 6"	28 ft.

**Procedure (con't)**

**7. Important Points**

- a. Worker shall not round a corner or work at right angle to the pivot arms at an opposing leading edge
- b. In the event of a worker's fall at a right angle to the pivot arms, could cause the PR 600 to move in a laterala motion
- c. Rigging must be carried out by a competent person to the distance of chart (Figure 2)
- d. The lifeline is not to exceed two (2) feet in addition to the distance from the pivot arms perpendicular to the leading edge
- e. Maximum weight of a worker including tools shall not exceed greater than 141 Kg (310 lbs.)
- f. When two workers are hooked to the PR 600 anchor, one person can rig a safety line, not to exceed 0.6 meters (2 ft.) from the distance of the pivot points to leading edge
- g. The second person will not rig the lifeline within 6" of the leading edge, thus not allowing the worker to fall over the edge and restraining the worker to the confines of the roof
- h. In case of a fall by the first person, the second person is available to rescue the first person

Figure 3

**General**

This Job Procedure describes the use of a control zone with a safety monitor as an acceptable work procedure.

<b>Hazards Present</b>		
• Minor Injury	• Serious Injury	• Death
<b>Protective Mechanisms</b>		
• PPE	• Manufacturers	• Training/Supervision
<b>Recommendations</b>		
<b>Equipment / Tools Required</b>		
• Rope with Safety Flags	• Safety Cones / Barricades	• Warning Signs
• High Visibility Armbands	• High Visibility Vests	• Warning Tape

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>• DO inspect all equipment before each use</li> <li>• DO remove from service if defects are found</li> <li>• DO read and understand manufacturer’s instructions</li> <li>• DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>• DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT alter or intentionally misuse equipment</li> <li>• DO NOT install or use if you have not been trained in its correct application and use</li> <li>• DO NOT throw or drop any equipment from building or heights</li> <li>• DO NOT use any equipment or tools if defects are found</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Directions</b> <ol style="list-style-type: none"> <li>a. A control zone with a safety monitor may be used as the means of fall protection under section where it is not practicable to use a method of fall restraint or fall arrest or where the use of a fall arrest system will result in greater hazards</li> <li>b. Use of a control zone is not permitted on a working surface where the slope of the surface exceeds 3 vertical inches in 12 horizontal inches or for scaffolds</li> </ol> </li> <li>2. <b>Definitions (See Figure 1)</b> <ol style="list-style-type: none"> <li>a. Control Zone means the area between an unguarded edge of a building or structure and a line which is set back a safe distance of at least two meters (6.5 feet)</li> <li>b. Safety Monitor System means a system in which a trained worker is designated to monitor work activities in a control zone to ensure that work is done in a manner that minimizes the potential for a worker to fall</li> <li>c. Buffer Zone means the area immediately outside the inner edge of the control zone and extending a further two meters (6.5 feet) in from that edge</li> </ol> </li> <li>3. <b>Width of the Control Zone</b> <ol style="list-style-type: none"> <li>a. Must be at least two metres (6.5 feet), with additional distance if any of the following conditions exists:               <ol style="list-style-type: none"> <li>i. The working surface is slippery or sloped</li> <li>ii. The work is carried out at an elevation relative to the unguarded edge</li> <li>iii. The risk is increased by the use of equipment near the control zone</li> </ol> </li> <li>b. Only workers directly required for the work at hand should be inside the control zone</li> </ol> </li> </ol>
---

**Procedure (con't)**

**4. Raised Warning Line (See Figure 1)**

- a. If a worker will be working within the "buffer zone" (less than two metres (6.5 feet) away from the inside edge of the control zone), a line defining the control zone is to be established along the internal edge of the control zone by a raised warning line or other equally effective means at all times during such work
- b. For example, an acceptable raised warning line includes a line with both of the following:
  - i. A high-visibility material, or a line flagged or clearly marked with high-visibility materials at intervals not exceeding two metres (6.5 feet)
  - ii. Rigged and maintained to be between 0.85 metres and 1.15 metres (34 and 45 inches) above the working surface
- c. If workers are to work within the buffer zone, a raised warning line must be put in place prior to work starting in the buffer zone
- d. If workers will be further than the boundary of the buffer zone at all times, a raised warning line is not required

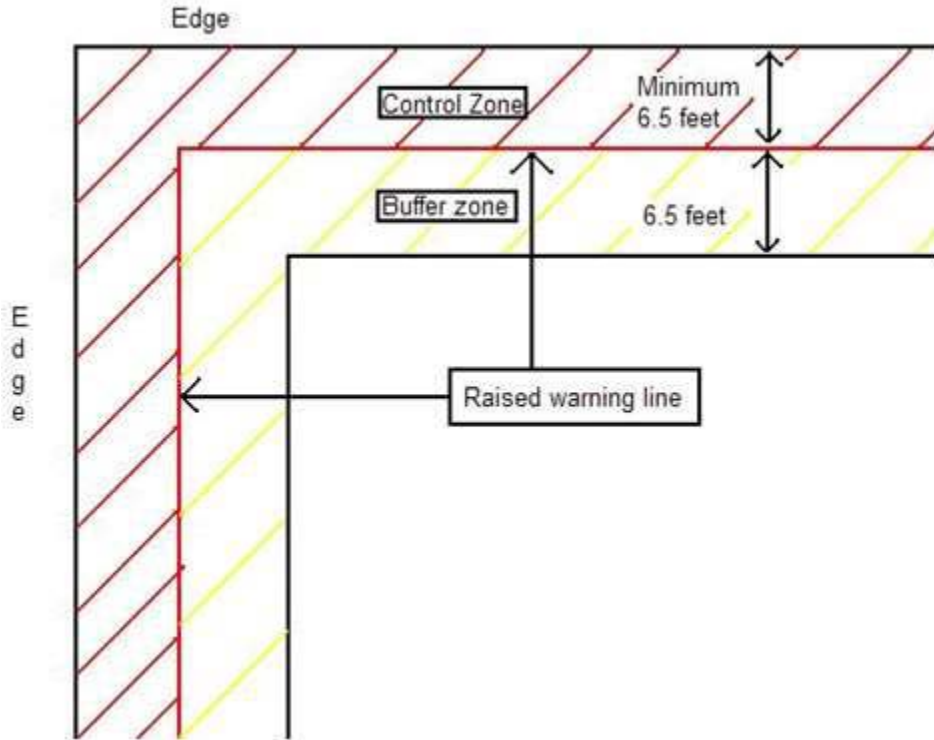

Figure 1

**Note:** Supervisors must ensure that workers are not within the buffer zone at any time if a warning line is not used.

**Procedure (con't)**

**5. Safety Monitor**

- a. The role of the safety monitor is to ensure that the work activity in the control zone is performed in accordance with the fall protection plan and in a manner that minimizes the potential for a worker to fall. A safety monitor is to:
  - i. Be experienced in the work overseen and trained in the role of safety monitor
  - ii. Be present at all times when a worker is in the control zone
  - iii. Have complete authority over the work as it relates to the prevention of falls
  - iv. Engage in no other duties while acting as the safety monitor
  - v. Be located so as to have a clear and continuous view of the work
  - vi. Be able to have normal voice communication with the workers being protected
  - vii. Monitor no more than eight workers
  - viii. Be instantly distinguishable from other workers (eg; brightly colored armband)

**6. Exception**

- a. If it is impracticable to use a fall protection system where an employee is engaged in weatherproofing of a roof, you may proceed with a safety monitor and control zone system without using a raised warning line by declaring the entire work surface the control zone if:
  - i. The roof has a total area of less than 23 m<sup>2</sup> (247 ft<sup>2</sup>)
  - ii. A roof or canopy or walkway that have slopes of 3 in 12 or less
- b. Employee has been fully instructed in work procedures and hazards and in how to protect himself or herself from falling
- c. This should be specifically noted in the fall protection plan.
- d. The safety monitor should be positioned in a safe location and have a clear view of the work.

Form F-02-2 Fall Protection Plan

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. The appropriate regulations and statutes should always be consulted and adhered to. Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

Vertical Lifelines and Vertical Lifeline Subsystems are used as part of a Personal Fall Arrest or Restraint System. They are not designed for use in horizontal applications.

Purpose		
• Fall (Travel) Restraint	• Fall Arrest	
Hazards Present		
• Serious Injury	• Death	
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training/Supervision
Equipment / Tools Required		
• Tie-off Adapter	• Snap Hook	• Lifeline 16mm (5/8")
• Rope Grab 16mm (5/8")	• Labels	• Carabiner
• Full Body Harness	• Energy Absorbing Lanyard/Self-Retracting Lanyard	• Attachment Eye

**Do**

- DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace
- DO inspect all equipment before each use
- DO remove from service if used in a fall
- DO read and understand manufacturer’s instructions
- DO ensure anchorage points are rigid
- DO use caution around moving machinery, electrical hazards, chemical hazards and sharp edges
- DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis

**Do not**

- DO NOT alter or intentionally misuse equipment
- DO NOT use if subjected to fall arrest forces
- DO NOT install or use if you have not been trained in its correct application and use
- DO NOT use if there is a reason to doubt your fitness to absorb the impact from a fall arrest
- DO NOT store in direct sunlight. Avoid areas where chemical vapors are present
- DO NOT use non-locking connectors with this system

- A. Snap Hook
- B. Lifeline
- C. Anchorage Point
- D. Rope Grab
- E. Shock Absorbing Lanyard
- F. Dorsal D-Ring
- G. Attachment Eye
- H. Tie-Off Adaptor

Figure 1

**Procedure**

**1. System Connectors**

- a. Connectors (hooks, carabiners, D-rings) must be capable of supporting at least 2268 Kg (5,000 lbs.)
- b. Connectors must be compatible in size, shape and strength with the anchorage or other system components. Non-compatible connectors may unintentionally disengage (roll-out)
- c. Self-locking snap hooks and carabiners are required

**2. Anchorages for Fall Arrest**

- a. Must be capable of sustaining static loads in the directions permitted by the personal fall arrest system of at least 2268 Kg (5,000 lbs.)
- b. Anchorages used for attachment of personal fall arrest systems shall be independent of any anchorage being used to support or suspend platforms.

OR

**3. Anchorage for Fall Restraint**

- a. Must be attached to an anchorage capable of sustaining static loads in the directions permitted by the restraint system of at least 1360 Kg (3,000 lbs.)

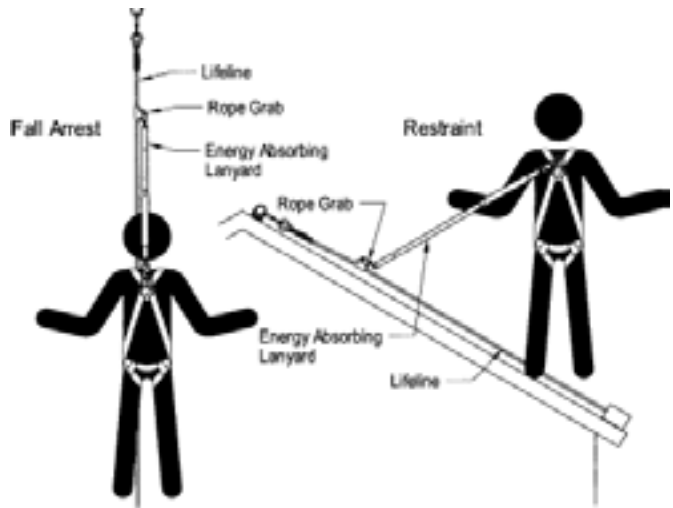

Figure 2

**Limitations**

**4. Capacity**

- a. The vertical Lifeline is designed for use by persons with a combined weight (clothing, tools, etc.) of 59 to 140 Kg (130 to 310 lbs.)
- b. No more than one (1) person may be connected to a single lifeline

**5. Free Fall for Fall Arrest**

- a. Fall Arrest systems used with this equipment must limit free fall to 1.8 m (6 ft.)

OR

**6. Free Fall for Fall Restraint**

- a. Restraint systems must be rigged so that no vertical free fall is possible

**7. Swing Falls**

- a. Swing Falls occur when the anchorage point is not directly above the point where a fall occurs. The force of striking an object in a swing fall may cause serious injury or death
- b. Minimize swing falls by working as close to the anchorage point as possible
- c. Do not permit, in other words, eliminate, a swing fall if injury could occur.

Figure 3

**8. Body Support**

- a. A full body harness must be used

Figure 4

**Procedure for Use**

**9. Before Each Use**

- a. Inspect all components of the vertical lifeline system
- b. Do not use any equipment if inspection reveals an unsafe or defective condition
- c. Read and understand manufacturer’s instructions for all components

**10. Connect to Anchorage (See Figure 4)**

- a. Connect the Snap Hook (A) on the Vertical Lifeline (B) to a rigid Anchorage Point (C) that meets the requirements on page 2 “Equipment Requirements”
- b. Make sure only self-locking snaps hooks and carabiners are used and all connections are compatible in size, shape and strength

**11. Attach the Rope Grab**

- a. Attach the Rope Grab (D) to the Vertical Lifeline (B).
  - i. Ensure the rope grab is in the “UP” position as indicated on the product. The “UP” end of the rope grab must be oriented towards the anchorage. (See Figure 5)
  - ii. Unscrew the knurled knob until the hinged channel bracket opens
  - iii. Pull the lifeline sleeve apart until the unit is fully opened. (See Figure 6)
  - iv. To install on the lifeline, raise the locking cam to the “UP” position and install the rope inside the lifeline channel and close the rope grab halves. Screw-in the knurled knob and slide the locking latch closed (See Figure 7)
  - v. Test the rope grab operation by pulling down on the locking cam. The rope grab must lock onto the lifeline and prevent any descent on the lifeline once the cam is engaged

Figure 5

Figure 6

Figure 7

### Procedure for Use

#### 12. Position the Rope Grab on the Lifeline

- a. Using the lanyard connected to the rope grab, pull up slightly on the rope grab locking cam to release it from the locked position. Always keep a minimum of 3.7m (12 ft.) of rope below the rope grab to accommodate locking distance and fall clearance
- b. Using the connected lanyard, raise or lower the rope grab to the desired location. Apply tension to the lifeline to assure smooth travel of the rope grab on the lifeline. Lifeline tension can be achieved by adding a weight on the lifeline end or extending additional lifeline (in a hanging orientation) to provide weight
- c. After locating the rope grab, position by pulling the locking cam until the cam lever is in the full down position. The locking cam must be released before attempting to reposition the rope grab

#### 13. Put on the Full Body Harness

- a. A full body harness must always be used with a vertical lifeline system as per training and certification provided by the company

#### 14. Connect the Shock Absorbing Lanyard

- a. Connect the Snap Hook on the Shock Absorber end of the Lanyard (Figure 4)(E) to the back Dorsal D-Ring (F) on the Full Body Harness. Connect the Snap Hook on the other end of the Lanyard to the Attachment Eye (G) on the Rope Grab

#### 15. System Removal

- a. Reverse procedure for removal.

### Maintenance & Storage

#### 16. Cleaning

- a. Clean the Vertical Lifeline with water and a mild detergent. Wipe hardware with a clean, dry cloth and hang to air dry
- b. Do not force dry with heat
- c. An excessive build-up of dirt, paint, etc. may prevent the Vertical Lifeline from working properly, and in severe cases, weaken the rope

#### 17. Storage

- a. Store the vertical Lifeline in a cool, dry, clean environment, out of direct sunlight
- b. Avoid areas where chemical vapors may be present
- c. Thoroughly inspect the Vertical Lifeline after extended storage

Form F-02-2 Fall Protection Plan

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. The appropriate regulations and statutes should always be consulted and adhered to. Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

This informs workers about the dangers of portable fuel containers such as jerry cans igniting when being filled or used. Remember STOP, DROP AND ROLL.

Hazards Present		
● Flash Fire / Explosion	● Eye/ Skin Irritation	● Inhalation
Protective Mechanisms		
● Eye Protection	● Respiratory Protection	● Manufacturers Specifications
● Hand Protection	● WHMIS	● Training
Equipment / Tools Required		
● Approved Containers	● PPE	● Spill Kit
● TDG Legislation		

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure that portable fuel containers are being placed on the ground while they are being filled from fuel dispensers (contact with the earth allows any build-up of static electrical charges to dissipate and if accidental overflow occurs during the filling the risk of a fire is reduced)</li> <li>● DO keep the nozzle of the petrol dispenser in contact with the container at all times during the filling operation (this will maintain the electrical continuity and prevent a spark jumping across the gap between the nozzle and the container)</li> <li>● DO wear clothing to reduce static electricity and wear shoes with conductive soles</li> <li>● DO keep one hand on the container while filling to reduce the likelihood of static electricity build up and discharge</li> <li>● DO transport portable fuel containers secured, upright and away from heat sources, such as the sun, in a well-ventilated space</li> <li>● DO avoid prolonged exposure to vapors</li> <li>● DO keep your face away from the nozzle or container opening</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use a plastic funnel to fill a portable fuel container. The funnel will act as an insulator and promote the generation of static electrical charges</li> <li>● DO NOT siphon gasoline by mouth</li> <li>● DO NOT get back into your vehicle after fuelling has started. If you do, new static buildup can cause a flash fire. (Make sure you touch metal prior to starting any fuelling procedures)</li> <li>● DO NOT mix even a small amount of gasoline with kerosene or diesel fuel</li> <li>● DO NOT smoke where gasoline is handled or stored</li> <li>● DO NOT leave your vehicle’s engine running when filling</li> <li>● DO NOT induce vomiting if swallowed</li> <li>● DO NOT dispense in areas that don’t get plenty of fresh air</li> </ul>
--	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>a. Check the fuel container to make sure it is an approved container for fuel</li> <li>b. Do not use containers that do not seal properly</li> <li>c. Check the area to ensure there are no unsafe acts or conditions present</li> <li>d. Take note of where the spill kit and fire extinguisher is located</li> </ol> </li> </ol>
---

**Procedure**

**2. Prepare to fill fuel container**

- a. Remove container from inside vehicle or from bed of truck
- b. Place container on the ground to avoid a possible static electricity ignition of fuel vapors. Never fill inside a vehicle or its trunk, the bed of a pickup truck, or the floor of a trailer

**3. Filling the fuel container**

- a. Remove cap from container
- b. Release nozzle from fuel tank and select appropriate grade
- c. Insert nozzle into fuel container keeping nozzle in contact with the rim of the container while filling
- d. Squeeze handle on nozzle allowing fueling
- e. Manually control the nozzle valve throughout the filling process
- f. Fill slowly to decrease the chance of static electricity buildup and minimize spills and splattering
- g. Fill container no more than 95% to allow for expansion
- h. Place cap tightly on the container after filling – do not use containers that do not seal properly

Figure 1

**4. Emergency Actions**

- a. a) If you come into contact with gasoline or diesel fuel:
  - i. **Eyes:** Flush with water for 15 minutes
  - ii. **Skin:** Remove any gasoline soaked clothing and wash exposed areas with soap and water
  - iii. **Ingestion:** Call a physician. DO NOT induce vomiting
  - iv. **Inhalation:** Remove to fresh air upon being overcome and/or experiencing an unusual symptom (i.e. vomiting, headaches, drowsiness, and other central nervous system)

**5. Fire response**

- a. Hit the “Emergency Stop Button”
- b. Evacuate non-essential personnel and keep pedestrian and vehicular traffic out of the danger area as much as possible
- c. Use Fire Extinguisher to put out small fires. Do not try to put out a fire that is larger than the size of a small trash pail
- d. Notify Emergency Personnel

**6. Major Spill (more than 10 litres)**

- a. If it safe to do so, attempt to contain the spill by using absorbent material, soil, etc
- b. Identify the direction that the spill is moving and protect catch basins, manholes, drains, waterways, ditches and other sensitive low areas in the path of the spill
- c. Use rubber mats to cover any drains, manholes and catch basins
- d. Notify Emergency Personnel and under their direction efforts to cleanup can be commenced

**7. Minor Spill response (anything less than 10 litres)**

- a. Use materials available on-site in the Spill Containment Kits. Further containment and removal of the spill should be undertaken

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Protecting workers from injuries associated with the care and handling of propane cylinders.

Hazards Present		
● Explosion	● Eye/ Skin Irritation/ Burns	● Asphyxiation (Gas Leak)
Protective Mechanisms		
● ERP (Emergency Response Plan)	● Safe Work Practices/Procedures	● Manufacturers Specifications
● TDG (Transportation of Dangerous Goods) Legislation	● WHMIS	● PPE & Training
Equipment / Tools Required		
● Approved Cylinders	● PPE	● Tie Down Straps

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO have an adequate fire extinguisher present</li> <li>● DO make sure tanks are undented, with valve guards, and have been tested/validated, and have safety labels</li> <li>● DO make sure fuel lines have regulators</li> <li>● DO ensure propane bottles are transported and secured in an upright position</li> <li>● DO ensure that propane bottles are properly shut off</li> <li>● DO ensure cylinders in storage or transit are equipped with valve cap or collar and regulator is removed</li> <li>● DO use soapy water when checking for a connection leak</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT smoke when handling propane fuel equipment</li> <li>● DO NOT store cylinders inside buildings, or carried in closed canopies, vehicles or tool vans</li> <li>● DO NOT paint cylinders over in any fashion</li> <li>● DO NOT use cylinders if shoulder label/stamp is not legible</li> <li>● DO NOT use cylinders within 10-12 feet of fresh air intakes on the roof</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection</b> <ol style="list-style-type: none"> <li>a. Check for the date of manufacture or the last valid inspection date (10 years or less)</li> <li>b. Visually inspect the cylinder for cuts, gouges, dents and rusting</li> <li>c. Test for leakage which may render cylinder defective. Use soap or leak detector (service valve, valve, sight gauge, relief valve, vent valve)</li> <li>d. Check that the relief valve fitting is approximately 90° from the locating holes and secure.</li> <li>e. Check service valve for defects (handle broken, spindle bent, defective or missing “O” ring or back up ring)</li> </ol> </li> <li>2. <b>Transporting cylinders</b> <ol style="list-style-type: none"> <li>a. Load cylinders in open truck bed or open trailer.</li> <li>b. Secure in an upright position with a safety plug (a POL plug) in place. A POL plug will prevent gas leakage when the valve is accidentally turned on (See Figure 1)</li> <li>c. Keep the transport area well ventilated to prevent gas build up</li> </ol> </li> </ol>	 <p style="text-align: center;">Figure 1</p>
--	---

**Procedure (con't)**

**2. Transport cylinders (con't)**

- d. If cylinders are required to be lifted onto the roof area; they must be secured in an upright position to propane lifter dollies
- e. Never lift the propane tanks around the collar. These can break easily and were not designed for this purpose
- f. If cylinder must be moved around on the roof use the dollies

**3. Handling**

- a. Only use propane and propane appliances for their intended purpose and only store enough for your immediate purposes
- b. Make yearly cleaning, maintenance and safety inspections of propane cylinders and/or appliances part of your routine. Where required, have them inspected or repaired by a trained professional
- c. When using propane appliances, keep them away from anything that can burn, including dry vegetation, deck rails, wood balconies, twigs, etc. and items in or around vehicles
- d. When handling propane and propane appliances, keep them away from heat sources or flames, such as lit cigarettes
- e. Use propane outdoors in a cool, well-ventilated area; where possible
- f. To check for leaks, brush a soap and water solution over the suspected area — bubbles will form if there is a leak. If you suspect a leak, leave the area immediately, shut off the gas supply if possible and remove any possible sources of ignition. Call the fire department from a nearby location
- g. Always have a fire extinguisher available
- h. If equipment will not be used for a certain length of time, (e.g.: over a weekend, overnight etc.) close the service valve of the tank

**4. Changing a Cylinder (See Figure 2)**

- a. Follow the manufacturer’s instructions for using and fitting propane appliances to their gas supply
- b. Secure the tank to the unit with the tank retaining straps. Make sure that they are working properly. Adjust as required
- c. Connect the gas line to the tank by lining up the gas line fitting with the service valve outlet and turning clockwise. Hand tighten only. Do not use pliers, wrenches, etc. as this will damage the “O” ring
- d. After having connected the gas line to the tank, slowly turn the service valve to the “fully on” position. Check for a leak by listening for escaping gas or you may notice a “sour smell”.
- e. If there is a leak, close the service valve immediately and check connection. If connection is O.K then try another tank
- f. Attach a “Repair Tag” to the faulty tank and set it “right side up”. Advise foreman. If the second tank also has a leak, contact the foreman to arrange for repair
- g. Ensure when changing the tank that you are a minimum of 6 feet from any air intake to the building

Figure 2

**Procedure (con't)**

**5. Storage**

- a. When storing propane and propane appliances, keep them away from heat sources or flames, such as lit cigarettes
- b. Store propane cylinders outdoors, preferably in a locked, detached shed or shaded area. Excess heat may overpressure the cylinder and cause it to release propane from the cylinder relief valve
- c. Exposure to propane can result in nausea and headaches. If either of these symptoms develops, get outside immediately and breathe fresh air. Under extreme conditions, exposure to flammable gases can result in death

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

A job hazard assessment is a method to identify existing and /or potential hazards of a job. Each task will be studied and each step recorded so that the entire job process is considered. Hazards (or potential hazards) are then more easily identified and the best way to reduce or eliminate those hazards can be determined.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Falls / Slips / Trips</li> <li>● Broken Bones</li> </ul>	<ul style="list-style-type: none"> <li>● Explosions</li> <li>● Burns</li> </ul>	<ul style="list-style-type: none"> <li>● Inhalation of fumes</li> <li>● Death</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● ERP (Emergency Response Plan)</li> <li>● Training / WHMIS</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practices/Procedures</li> <li>● SDS</li> </ul>	<ul style="list-style-type: none"> <li>● Manufacturers Specifications</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Hazard Assessment Form (P-02-1)</li> </ul>	<ul style="list-style-type: none"> <li>● Clipboard</li> </ul>	<ul style="list-style-type: none"> <li>● Pen / Pencil</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO try to involve more than 1 person when performing the JHA</li> <li>● DO ensure the most experienced person is on the Job Hazard Assessment team</li> <li>● DO perform a job hazard assessment on every job before beginning any site work</li> <li>●</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT try to perform a Job Hazard assessment remotely. Always perform on site</li> <li>● DO NOT over complicate the procedure. Follow the steps outlined here</li> </ul>
--	---

<p><b>Procedure</b></p> <p><b>1. What is a Job Hazard Assessment?</b>  A risk assessment is simply a careful examination of what, in your work, could cause harm to people, so that you can weigh up whether you have taken enough precautions or should do more to prevent harm. Workers and others have a right to be protected from harm caused by a failure to take reasonable control measures.  Accidents and ill health can ruin lives and affect your business too if output is lost, machinery is damaged, insurance costs increase or you have to go to court. You are legally required to assess the risks in your workplace so that you put in place a plan to control the risks.</p> <p><b>2. Definitions</b></p> <p><b>Hazard</b> is anything that may cause harm, such as chemicals, electricity, working from heights, fixing a photocopier paper jam, etc.</p> <p><b>Risk</b> is the chance, high or low, that somebody could be harmed by these and other hazards, together with an indication of how serious the harm could be.</p> <p><b>Critical Task</b> is a sequence of steps designed to accomplish a goal. We'll define a job task as a segment of the operation necessary to advance the work. (e.g. operating a grinder, mopping hot asphalt).</p> <p><b>3. Prior to beginning the job hazard assessment</b></p> <ol style="list-style-type: none"> <li>a. Gather necessary items to conduct the job hazard assessment efficiently and smoothly</li> <li>b. Arrange to meet your assessment team on the job site</li> </ol>
---

**Procedure (con't)**

**4. Critical Tasks to be analyzed**

- a. Walk through the job site to view and analyze the tasks that will be undertaken by the work crew
- b. Ask employees what they think. They may have noticed things that are not immediately obvious to you
- c. Record each task that could be potentially harmful to employees, other trades or general public
- d. Listed below are some commonly selected types of tasks selected for the JHA
  - i. Dangerous Jobs: based on the number of incidents (accidents and dangerous occurrences) documented over a given time period and resulting in harm or potential harm. Examples include jobs where an incident, hazardous condition or exposure to harmful substances has caused, or could cause, serious injury
  - ii. New Tasks: due to lack of experience, hazards in new tasks may not be obvious or anticipated
  - iii. Infrequently Performed Tasks: workers may be in more danger when undertaking non-routine tasks or working alone
  - iv. Modified Tasks: changes in job procedures or conditions may create new hazard

**5. Identify Hazards**

- a. List the things that could go wrong (See Figure 1)
- b. Remember to think about long term hazards to health (e.g. high levels of noise or exposure to harmful substances) as well as safety hazards
- c. Check manufacturer’s instructions or data sheets for chemicals and equipment as they can be very helpful in spelling out the hazards and putting them in their true perspective

Critical Task	Hazard	Rank	Controls	Person Responsible	Date Completed
1. Park the vehicle in a safe place	1 a) Vehicle parked too close to passing traffic (collision hazard) b) Vehicle parked on uneven or soft ground (jack tip over during change of tire) c) Vehicle may roll on driver if not properly braked and blocked				
2. Remove spare and tool kit	2 a) Muscle strain or hand injuries from lifting spare				
3. Pry off hubcap and loosen lug nuts	3 a) Hub cap may pop off and hit driver due to excessive force or unsafe work procedure b) Lug wrench may slip and cause hand injuries				
4. And so on.....	4 a)				

Figure 1 Examples of Task Steps in Changing a Flat Tire

**Procedure (con't)**

**6. Rank Hazards**

- a. Prioritize tasks to determine which ones having hazards would be most catastrophic should something happen, and what the probability is of it happening if the hazard remains uncontrolled
- b. Ranking hazards in this way will determine which ones should be dealt with first
- c. Priority should always be to work on the “Worst First”
- d. Use the following “Consequence Categories” and “Probability Categories” to rank all hazards

Hazard Consequence Categories		
I.	Catastrophic	May cause death, injury or company shutdown
II.	Critical	May cause severe injury, severe occupational illness or major property damage
III.	Marginal	May cause minor injury or minor occupational illness resulting in workday(s) lost, or minor property damage
IV.	Negligible	Probably would not affect personnel safety or health. Could result in a lost workday, and is still in violation of specific criteria

Hazard Consequence Categories		
I.	Probable (likely)	To occur immediately or within a short period of time when exposed to the hazard
II.	Reasonably Probable	Probably will occur in time
III.	Remote (Possible)	To occur in time
IV.	Extremely Remote	Unlikely to occur

**7. Identify Controls**

The generally accepted measures to control hazards in a job, in order of preference are:

- a. “Engineering Controls” to Eliminate the hazard
  - i. **Choose a different process** (find a new way to do the task)
  - ii. **Modify an existing process.** For example, consider changing the layout of the workflow, where the job is done, etc
  - iii. **Substitute** a less hazardous substance or material, for example:
    - 1. Replace solvent-based paints with water-based
    - 2. Use jackhammers mounted on mobile equipment instead of hand held units
    - 3. Use welding instead of riveting to reduce noise
  - iv. **Dilute/reduce** the hazard by improving ventilation or using other environmental controls
  - v. **Modify or change** materials, equipment, or tools
  - vi. **Contain the hazard** by using machine guards, enclosures, booths, or similar devices to separate the workers from the hazard.
  - vii. **Revise Work Procedures** by changing the sequence of steps or adding additional steps.
- b. “Administrative Controls” to Reduce Exposure through:
  - i. Reducing the number of times workers are exposed to a hazard – for example, a machine could be modified so less maintenance is necessary
  - ii. Using job rotations to limit the time each worker spends doing certain work
  - iii. Providing emergency facilities, such as eyewash stations and emergency showers, to reduce harm if a worker is hurt

**Procedure (con't)**

**7. Identify Controls (con't)**

- c. “Personal Protective Equipment Controls” (PPE)
  - i. PPE should not be the only method used to reduce exposure except under very specific circumstances because PPE may “fail” with little or no warning. PPE should be a “last resort” method when all other controls have been exhausted

**8. Communicate Information**

- a. Involve workers in the Job Hazard Assessment process
- b. Discuss and review JHA with site team before starting any work
- c. Involve workers in daily hazard reviews and weekly toolbox talks

**9. Review of Job Hazard Assessment**

- a. Work site activities are always changing and new hazards can arise. It is important to monitor both the hazard and control method(s) already implemented to ensure that controls are working effectively and that exposure to the hazard is reduced or eliminated. Some ways we can do this are:
  - i. Planned (formal) inspections
  - ii. Ongoing (informal) inspections
  - iii. Review of Job Hazard Assessment
  - iv. Field level hazard assessments
  - v. Toolbox talks

Load must be attached by lift rings, slings or other suitable means</li> <li>• DO NOT exceed the rated load capacity</li> <li>• DO NOT operate while under the influence of drugs, alcohol or medication</li> <li>• DO NOT climb on the hoist, use only a step ladder. Do not use an extension ladder</li> <li>• DO NOT allow anyone under a raised load</li> <li>• DO NOT hoist in an open doorway</li> <li>• DO NOT allow any person to ride on the hoist</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li><b>1. Conduct a pre-starting inspection</b> <ol style="list-style-type: none"> <li>a. Determine that the roof deck can support the intended loads in hoisting and material handling in addition to the weight of the counterweight</li> <li>b. Check the hoist components for cracked or broken welds as well as bent frame members. If any welds are damaged or frame members bent do not use the hoist. Replace the component immediately</li> <li>c. Read the safety labels for warning of potential hazards that can cause serious injury. If a label becomes hard to read consult with your supervisor to have it replaced</li> <li>d. Thoroughly read and understand the manufacturer’s instruction manual</li> </ol> </li> <li><b>2. Before raising to roof level</b> <ol style="list-style-type: none"> <li>a. Safe assembly of the 300 Hand Hoist requires two people. Injury can result from attempts to assemble this hoist by a single operator</li> <li>b. Hoist installation and setup cannot proceed until all necessary parts and equipment have been raised to the roof deck. Use a hoist beam, swing beam, or freight elevator for this purpose</li> </ol> </li> <li><b>3. Raising to the roof level</b> <ol style="list-style-type: none"> <li>a. The hoist pieces should be brought up to the roof and assembled more than 10 feet back from the roof edge.</li> </ol> </li> </ol>
---

**Procedure (con't)**

**4. Assembling the frame**

- a. The short flat component is the vertical support. While one person holds the vertical support in place the other should lift the long main boom, threading the small end through the top of the vertical boom
- b. On the bottom of the counterweight boom there is a round tube, this is fitted into the vertical square tube in the vertical hoist frame. See figure 1
- c. A 12” Gin wheel should be attached to the hoist via the provided hook on the wheel. There is a hoop on the hand hoist designed to accept the weight of the gin wheel. See Figure 2
- d. The rope should be threaded through the gin wheel now, while in a safe easily accessible position
- e. Now that the hoist is structurally assembled it is time to move it to the roof edge. With the operators on the roof deck side (away from the roof edge) slide the hoist into the desired operating position
- f. If there is no adequate safety rail system in place the operators should be in safety harnesses, as per local Fall Protection Regulations.
- g. Once the hoist is in operating position install the counterweight ballast system
- h. A safety factor of 1.5 times the lifted amount must be used for ballast weight. E.g. for a full lift of 300 lbs, the hoist will require that 450 lbs of counterweight ballast be installed. Never use building process or pourable materials as counterweight. Use a permanent counterweight system with their weight clearly displayed

Figure 1

Figure 2

**5. Operating the Hoist**

- a. This hoist is designed to be operated by several people, working together to manually lift materials up to the roof deck
- b. The hoist is only a support frame. All lifting and braking of the load is done by the operator. For this reason it is important that the operator wear good gloves and keep the area under the hoist clear of people

**\* Always use 3/4” to 1” rope, checking with the manufacturer that its rated breaking strength is at least 5 times greater than the load being lifted.**

**6. Hand Signals (See SWP # 21 Hoisting – Hand Signals)**

- a. All persons must be familiar with hand signals

**7. Disassembly**

- a. Reverse steps 4a to 4h

**8. Removing parts from deck**

- a. Use a hoist beam, swing beam or freight elevator to lower the disassembled parts of the hoist to the ground
- b. Safely secure the hoist parts on the transporting medium without overloading before lowering to the ground

**Procedure (con't)**

**9. Maintenance**

- a. Only authorized, trained personnel should perform maintenance
- b. Except for maintenance that cannot be done otherwise, bring the load to its lowest position when working on any part of the hoist
- c. Shut down and lock out the hoist when not in use
- d. Lift rope/cable to roof level. Do not leave hanging to the ground

---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection</b> <ol style="list-style-type: none"> <li>a. Determine that the roof deck can support the intended loads in hoisting and material handling in addition to the weight of the counterweight</li> <li>b. Ensure all structural members of the hoist are free of defects and damage that may affect the integrity of the hoist</li> <li>c. Read the safety labels for warning of potential hazards that can cause serious injury. If a label becomes hard to read consult with your supervisor to have it replaced</li> <li>d. Thoroughly read and understand the manufacturer’s instruction manual</li> </ol> </li> <li>2. <b>Before raising to roof level</b> <ol style="list-style-type: none"> <li>a. Refer to Figure 3. Insert short hitch pin #6 through the trolley rail at point “B” to prevent the trolley support #12 from rolling during transport and handling</li> <li>b. This pin should remain in place until the power unit is ready to be installed on hoist</li> <li>c. Hoist installation and setup cannot proceed until all necessary parts and equipment have been raised to the roof deck. Use a hoist beam, swing beam, or freight elevator for this purpose</li> </ol> </li> </ol>
--

**Procedure**

**3. Raising to the roof level**

- a. When raising the rear leg assembly to the roof, place it at least 25 feet from the roof edge
- b. When raising the front frame assembly, place it about 14 feet in front of the rear leg assembly but still at least 10 feet from the roof edge
- c. After raising the trolley rail to the roof, place it between the front and rear section.

**4. Assembling the frame**

- a. Ensure the front frame and rear leg sections and the trolley rail section are placed in position for assembly well back from the roof edge
- b. Refer to Figure 1. Remove the two spring lock pins #1 on the rear leg base #2 and raise the rear leg #3 to an upright position
- c. Lock the rear leg in the upright position by inserting the #1 spring lock pins through the holes on the bottom of the rear leg into the rear leg base
- d. Move the socket on rear leg #3 to its lowest position by releasing the #5 lock screws

Figure 1

Figure 2

- e. Refer to Figure 2. Slide rear leg brace #7 into the rear of the trolley rail assembly #11
- f. Align the matching holes in the trolley rail assembly and the rear leg socket hub and attach with a short hitch pin #6
- g. Raise the trolley rail assembly on the rear leg to align the matching holes in the rear leg brace #7 and the trolley rail assembly. Insert short hitch pin #6 through the matching holes
- h. Refer to Figure 3. Raise the front frame brace #23 and tie temporarily to the top of the front frame assembly #24
- i. Release the spring lock pin holding the operator fence and raise front frame assembly to the upright position. Swing the operator fence 90° to help support the front frame during assembly
- j. Position the front frame assembly such that the trolley rail assembly front support is directly under the front frame
- k. Raise the trolley rail assembly and secure it to the front frame assembly by inserting hitch pin/hairpin #8 through the matching holes in the trolley rail assembly front support and the front frame pin tabs
- l. Untie front frame brace #23 and secure it to the trolley rail assembly with long hitch pin #10 through the matching holes in the trolley rail assembly rear supports

**Procedure (con't)**

**4. Assembling the frame (con't)**

Figure 3

- m. Insert spring lock pin #1 into the rear leg and lower rear leg socket to rest on pin. Tighten lock screws #5. If not using track at maximum working height, insert pin above socket on rear leg
- n. Raise the trolley rail assembly on the front frame legs until it is in the desired position (generally maximum height). The trolley rail should be slightly lower at the rear leg to facilitate pulling in loads. Insert a spring lock pin #1 into each leg and lower the front frame to rest on pins. Tighten lock screws #5
- o. Swing the operator fence outward to its protective wing position on the left side of the front frame assembly and pin into place with #9 spring lock pin
- p. Carefully move the entire unit to the roof edge by carrying from the front frame and rear leg assembly. The front frame assembly should be as plumb (vertical) as possible, resting on a secure base several inches in from the roof edge. Holes are provided in cross tie #21 for fastening to a 2 x 6 plank
- q. Mount 30 ballast blocks (1500 lbs) as counterweight on the rear leg base #2. Make sure it is properly nested. Tie the counterweight securely to the “D” rings on the rear leg assembly to prevent accidental removal. For equipment protection and safety of personnel, the counterweight ballast blocks must be prepared properly (See item 5 Ballast Block Assembly)
- r. Ensure that all lock screws are tightened and all lock pins are inserted

**5. Ballast block assembly**

- a. Before using the ballast blocks, they must be filled with the proper amount of concrete. Refer to Manufacturer’s instruction manual for procedure

**6. Mounting the power unit to the hoist**

- a. When lifting the power unit, the following precautions must be observed:
  - i. Be sure of your footing
  - ii. Bend your knees and lift with your legs
  - iii. Hold the equipment section close to your body when lifting
- b. When mounting the power unit, have 4 people lift the unit and slide the unit onto the trolley support. Pin the power unit to the trolley support at two places, use the spring lock pin in the rear trolley support hole and the hitch pin in the forward trolley support hole to attach the power unit support

**Procedure (con't)**

**7. Reeving the cable**

- a. Before reeving the cable, lower the block bumper from its shipping position on the trolley support. Remove the spring lock pin, lower the block bumper, and re secure with the same pin
- b. Ensure sheaves turn freely
- c. Refer to Figure 4. For reeving with the two parts of a line, reeve the cable through block #13, then through block #19. Fasten the shackle and safety hook to the cable and attach safety hook to hanger #17. **Ensure the shackle and hook have a rated capacity of at least 1000 lbs and are in good condition**
- d. For single line operation, reeve the cable through block #13 and fasten the shackle and safety hook to cable.

**Never exceed the rated load capacity of 500 lbs for single line operation or 1000 lbs for Double line operation. The rated load capacity is the maximum load which should ever be Applied to the hoist. Rated load capacity is for straight line pull; avoid side loads, shock Loads, and sudden stops.**

Figure 4

**Procedure (con't)**

**8. Raising and lowering the load**

- a. The operator must remain behind the operator fence while using the hoist
- b. Before lifting, secure the load from shifting and ensure the safety latch on the hook is not supporting any load. Use tag lines to control all loads. Never hoist over an open doorway.
- c. Put the throttle in the slow position when starting and stopping the engine. This permits a warming and cooling period. Know how to stop your power unit quickly in case of emergency. Consult the engine manual for detailed operation of engine controls
- d. Close the choke to start a cold engine. Open choke slowly after engine starts. The choke must be open during normal operation or when starting a warm engine
- e. Start the engine and allow to warm up. Insure the valve control lever is in neutral. This lever is spring returned to neutral whenever the handle is released
- f. If engine or motor stalls or fails on power unit, release control levers immediately to prevent load from falling**
- g. To raise a load increase the engine speed and pull the control lever up. Release the control lever when the load reaches the desired height. Pull the trolley support back and lowering the load onto the roof
- h. As additional layers of cable are wound onto the drum, the lifting speed increases but the lifting capacity decreases
- i. To lower a load, raise the load and slide the trolley support to its forward position. Push the control lever down to lower the load
- j. When lowering the load, gradually decelerate the lowering speed as it nears the ground
- k. Always raise and lower loads smoothly. Avoid sudden starts and stops
- l. Make a few “dry runs” (without load, but with ballast) to become familiar with operation, controls, and power unit and to test hoisting clearance. Always maintain 10-20 pounds of cable tension with a cable weight. DO NOT attempt to make any equipment adjustments during operation

**9. 9) Hand Signals (See SWP # 21 Hoisting – Hand Signals)**

- a. All persons must be familiar with hand signals

**10. Disassembly – Rewinding the Cable**

- a. Ensure that all lifting tension has been removed from the cable
- b. Run trolley support #10 to the extreme rear and insert hitch pin #12 into the rear hole of the rail
- c. Remove safety hook from hanger #20. Unfasten the shackle and safety hook from the cable
- d. Tie a safety line at least 5 feet long to the cable end to prevent any accidental drawing of the operator’s hand into the winch during rewinding
- e. Start the power unit and operate the winch to rewind the cable first through block #22 and then through block #13. Ensure that the cable is rewinding evenly on the drum
- f. As the cable end approaches the drum, handle the cable only by the safety line described in Step d
- g. When the cable end reaches the winch, shut off the power unit and remove the safety line. Safely anchor the cable end for convenient access when preparing to lower the power unit to the deck or ground
- h. Return the block bumper to its shipping position by removing the spring lock pin, raising the block bumper, and re-securing with the same pin

**11. Removing the power unit from hoist**

- a. When removing the power unit, have four people support the unit while unfastening it from the trolley support at two places as described in Step 6. Carefully lower the unit to the deck observing the lifting precautions

**Procedure (con't)**

**12. Disassembling the frame**

- a. **Never disassemble the frame near a roof edge. Any accident near a roof edge can cause serious personal injury or death.**
- b. Ensure that the hoist is not supporting any load before proceeding
- c. Untie the rope securing the ballast blocks in the rear leg base. Remove the ballast blocks and place them where they will not impede dismantling procedures
- d. Remove the crosstie #5 from its 2"x 6" lumber mounting and unfasten the mounting from the supporting wall
- e. Move hoist assembly at least 10 feet away from the roof edge
- f. Release the spring lock pin holding the operator fence and swing the fence 90° to help support the front frame during disassembly
- g. Remove the hitch pin #12 that pins the rear leg brace to the trolley rail assembly
- h. Loosen lock screws #14 on front frame assembly. Raise the assembly off the spring lock pins in the front frame legs. Remove these pins and carefully lower the front frame assembly. Tighten lock screws #14
- i. Loosen lock screws #14 on rear leg socket. Raise the socket off the spring lock pin in the rear leg. Remove this pin and carefully lower the rear leg socket
- j. Unfasten the front frame brace from the trolley rail assembly by removing long hitch pin #19. Raise the front frame brace and tie it to the top of the front frame assembly #2
- k. Unfasten the trolley rail assembly from the front frame assembly by removing hitch pin/hairpin #28
- l. Unfasten the trolley rail assembly from the rear leg socket by removing hitch pin #12. Carefully lower the trolley rail assembly to the deck
- m. Remove the #16 spring lock pins from the holes on the bottom of the rear leg. Then lower the rear leg and reinstall these pins on the rear leg base
- n. Swing the operator fence inward to its shipping position between the front frame legs and pin into place with a spring lock pin

**13. Removing parts from deck**

- a. Use a hoist beam, swing beam or freight elevator to lower the disassembled parts of the hoist to the ground
- b. Safely secure the hoist parts on the transporting medium without overloading before lowering to the ground

**14. Maintenance**

- a. Only authorized, trained personnel should perform maintenance
- b. Except for maintenance that cannot be done otherwise, bring the load to its lowest position when working on any part of the hoist
- c. Shut down and lock out the power unit to prevent accidental start-up

Thoroughly read and understand the manufacturer’s instruction manual</li> </ol> </li> <li>2. <b>Assembly</b> <ol style="list-style-type: none"> <li>a. It is important to have the correct length of ladder set-up and the proper angle for safe material handling See Figure 1</li> </ol> </li> </ol>
--

**Procedure (con't)**

Hoist to Bearing Point "A"	Max. Horizontal Distance "B"	Hoist Length "C"
13 ½ ft	3 ft 4 in	16 ft
21 ½ ft	5 ft 4 in	24 ft
25 ft	6 ft 3 in	28 ft
29 ft	7 ft 3 in	32 ft
32 ft	8 ft	36 ft
39 ft	9 ft 9 in	44 ft

Figure 1

- b. Attach the top end bracket to the top section of the assembled ladder. The Top Bracket can be bolted to the top of the ladder section See Figure 2
- c. Splice the ladder sections together using the connection brackets. The connection brackets should be placed on the "outside" of the ladder section See Figure 3

Figure 2

Figure 3

**3. Installing the power unit**

- a. Remove the locking pin, unlocking the top locking arm
- b. Turn the Locking Handle so that the Locking Arm is in the unlock position
- c. Hang the ladder hoist power unit off of the 4th rung of the ladder
- d. Push the base of the ladder hoist inward, having the back of the power unit flush to the 2nd and 3rd rungs, as shown in Figure 4
- e. Turn the locking handle clockwise. This will push the top locking arm down and tighten the hoist power unit into the frame
- f. Reinsert the locking pin into place

Figure 4

**Procedure (con't)**

**4. Rigging the cable** (See Figure 5 & 6)

- a. a) **Single Cable** Configuration allows for faster loading of materials than the double line set-up and has **reduced** capacity. It is the most common system for setting up a Ladder Platform Hoist
  - i. Loop the cable from the power unit up through the top end cable block and return and attach it to the carriage connection point using the enclosed shackle
- b. **Double Cable** Configuration allows for an increased amount of material to be lifted at **half** the travel speed
  - i. The cable must be run through the top cable block, down to a second block connected at the connection point on the carriage
  - ii. The cable is then returned and fastened to the top bracket using the enclosed shackle

Figure 5

Figure 6

**5. Operating the Hoist**

- a. Before starting the engine, refer to the motor operating instructions for starting, oil and gasoline specifications
- b. Start the engine and adjust the throttle so that the engine runs at idle speed. The operator should make a trial run with the hoist to ensure that the engine, brake and clutch systems are working. The test shall be done while the carriage assembly is **not** loaded with material
- c. After completing the trial run, return the carriage assembly to the base position and load the hoisting carriage with material
- d. Material should be placed flat and evenly at the center of the carriage platform

**Do not exceed the posted hoist weight limit**

- e. Manually increase the engine speed to full throttle.
- f. With the engine at full throttle, slowly lift both the brake and clutch handles. Pressure on both handles must be maintained throughout the upward travel of the carriage assembly
- g. Once the carriage starts its upwards travel do not stop its motion until it reaches the top bracket  
**Note:** Should you stop the carriage in mid climb, the brake will hold the load. Do not return the loaded carriage to the ground. Reapply pressure on the brake and clutch handles and complete the hoisting. The hoist is designed for the lifting, not lowering of loads

**Procedure (con't)**

**6. Once the load is discharged**

- a. Slowly lift the brake control handle, allowing the empty carriage to return to the loading position
- b. **Caution:** Upon releasing the brake, the carriage will free fall. Allow the carriage to lower about 12” at a time as it descends by releasing the brake action slowly and at steady intervals

**7. Changing the hoist cable**

The condition of the hoist cable should be constantly monitored by the hoist operator. When the cable strands begin to split apart or fray, the cable should be replaced immediately.

- a. Release the brake and completely unspool the cable from the hoist drum
- b. Remove the retaining bolt holding the cable onto the hoist drum
- c. Install the replacement cable using the provided bolt
- d. Turn the drum and spool on the cable. If you are not sure of the direction in which the cable should be spooled, activate the engine and turn the drum for a single rotation

**8. Disassembly and storage**

- a. After stopping the engine, wait for all moving parts to stop, and for the engine to cool before disassembling
- b. Disconnect the spark plug wire from the plug
- c. Never store the engine in any enclosure before cooling
- d. Do not store the power unit with fuel in its tank in any enclosure where flames or sparks may be present
- e. Store the power pack unit upright and hang the ladder parts from a side wall to prevent damage

**9. Changing the hoist cable**

The brake is designed to open, and release completely when the brake arm is lifted. Before operating the hoist under load, the brake should be checked with the carriage in the unloaded position to ensure the brake releases and engages safely.

**Never apply oil to the brake drum or pad, complete brake failure can result.**

**10. Maintenance**

- a. Only authorized, trained personnel should perform maintenance
- b. Shut down and lock out the power unit to prevent accidental start-up
- c. Consult manufacturer’s instruction manual for clutch adjustment

**General**

Rigging looks like an easy operation that requires no particular skill or experience. However, many workers have lost fingers, hands or suffered more serious injuries because they thought, “anybody can do that”.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Pinch Points</li> <li>● Death</li> </ul>	<ul style="list-style-type: none"> <li>● Crush Injuries</li> <li>● Damage to Equipment/Material</li> </ul>	<ul style="list-style-type: none"> <li>● Falling Objects</li> </ul>

<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Slings</li> <li>● Hand Signals</li> </ul>	<ul style="list-style-type: none"> <li>● Shackles</li> <li>● Hooks</li> </ul>	<ul style="list-style-type: none"> <li>● Clips &amp; Clamps</li> <li>● Tag Lines</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure you are competent in rigging procedures</li> <li>● DO be acquainted with hand signals</li> <li>● DO inspect all components, including hardware before use</li> <li>● DO be aware of pinch points</li> <li>● DO know what hardware to use. All fittings must be of adequate strength for the application</li> <li>● DO ensure you are in view of operator</li> <li>● DO ensure you utilize a tag line</li> <li>● DO ensure hoisting hooks are equipped with safety catches</li> <li>● DO ensure load is centred</li> <li>● DO be aware of the direction of the swing of load</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use hoist structure to anchor life lines, worker’s harness or other attachments</li> <li>● DO NOT allow unauthorized personnel in the hoisting area</li> <li>● DO NOT walk under suspended loads</li> <li>● DO NOT lift when the visibility of riggers or hoist crew is impaired by snow, fog, rain, darkness or dust</li> <li>● DO NOT exceed the rated load capacity</li> <li>● DO NOT operate while under the influence of drugs, alcohol or medication</li> <li>● DO NOT overload a rope</li> <li>● DO NOT carry out hoisting or rigging when the winds create hazards for workers and the general public</li> <li>● DO NOT attempt to repair slings. Replace if worn or damaged</li> <li>● DO NOT drag a rope along the ground or over rough or sharp edges</li> <li>● DO NOT use cold ropes</li> </ul>
--	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection</b> <ol style="list-style-type: none"> <li>a. Ensure that the maximum load rating of rigging components as recommended by the manufacturer are not exceeded</li> <li>b. All rigging, hooks and components will be checked for excessive wear and damage prior to use, after one month or more of disuse and once during every year it is in operation</li> <li>c. One member of the crew will act as the designated signalperson. Signaller must be readily identifiable to the operator and will direct the movement of load by a well understood distinctive code of hand signals. Two-way electronic communication is an acceptable alternative</li> </ol> </li> </ol>
--

**Procedure (con't)**

**1. Conduct a pre-starting inspection (con't)**

- d. The signalperson will review the signals to be used with the crane operator. See SWP # 21 Hoisting – Hand Signals
- e. Damaged rigging must be clearly tagged “Out of Service”, removed from the work area and either repaired or replaced

**2. Signalperson**

- a. The signalperson is the only one to signal for a lift and must be careful not to order a move until he has received the “all ready” signal from each member of the crew
- b. Be sure you are in the clear before you give an “all ready” to the signalperson
- c. Watch out for the roll or swing of the load. Anticipate the direction of the swing or roll and work away from it

**3. Rigger**

- a. Be sure your hand is clear of pinch points
- b. Stay away from stacked material that may be knocked over by a swinging load
- c. Never stand under the load, and keep from under the boom as much as possible

**4. Lifting a load**

- a. Use tag lines to control the panels with one (1) person on each side
- b. Look over the location where the load is to be set. Remove unnecessary blocks or other objects that might fly up if struck by the load
- c. When lowering or setting the load, be sure your feet and all other parts of your body are out from under the load
- d. Set the load down easily and slowly so that if it rolls on the blocking, it will be a slow shift that you can get away from

**5. Synthetic web slings**

Synthetic web slings are a good choice where highly finished parts or delicate equipment must be protected from damage. The synthetic material has stretch and flexibility to help the slings mold to the shape of the load, gripping securely, while cushioning and absorbing shock more than a wire rope or chain.

- a. They are lightweight and very easy to handle
- b. They are non-sparking, non conductive and can be used safely in explosive atmospheres.
- c. Synthetic slings are typically not affected by grease, oil, moisture and certain chemicals. Check with the manufacturer to determine which conditions apply to the exact material you are using
- d. Synthetic web slings are easily cut and have poor abrasion resistance when compared with chain and wire rope slings. Protect webbing from sharp corners, protrusions, or abrasive surfaces
- e. Protect slings from heat sources such as steam pipes, open flame and welding splatter
- f. Nylon slings are damaged by acids, but resist caustics
- g. Polyester slings are damaged by caustics but resist acids
- h. Sunlight, moisture, and temperatures above 90°C (194°F) damage both nylon and polyester slings
- i. Use slings made of the right material for the job
- j. Check the manufacturers' slings for their code number and the rated capacity. Reference charts showing slings and hitch rated capacities are available from manufacturers
- k. Inspect slings before using them and keep an inspection record for each one

**Procedure (con't)**

**6. Selecting the proper wire rope sling**

- a. Follow the manufacturers' charts and tables on sling types, angles, and rope diameters and select a proper sling which suits the load and the slinging method that you are going to use. Sling types can be endless, single, two, three or four legs
- b. The sling must be both long enough and strong enough for the load and the slinging method
- c. Follow the manufacturers' recommendations on clips and clamps of suitable size and design for ropes of different sizes
- d. Consult the manufacturer or supplier when wire rope slings come into contact with acids or chemicals
- e. Attach using methods outlined by the manufacturer
- f. Remember that a socket and clip fittings used to attach the rope determine the sling's load limit. Fittings have 75% to 100% of the breaking load of the rope
- g. Remember that the safe load limit of a sling also depends on the hitch (method of applying a sling to the load). The type of hitch depends on the kind of material to be lifted, the safe load limit of the sling, the presence (or absence) of lugs on the load, the headroom, and other factors. Check with the manufacturer's instructions

Figure 1

**7. Use wire rope slings safely**

- a. Be sure you know the correct use of the equipment, the slinging procedures and the sling strength factors to be applied before lifting
- b. Use wire rope slings at rated limits
- c. Check the manufacturer's chart for sling properties
- d. Examine slings for wear, fatigue, crushed or broken wires, kinking, ballooning or "bird-caging", heat damage, etc. Check both before and after using slings to detect any damage or defects
- e. Attach the sling securely to the load and appliance and position hooks to face outwards
- f. Inspect and tighten fittings regularly
- g. Center the sling load to prevent the load from shifting suddenly and causing a high impact load
- h. Ensure that the load is free to be lifted
- i. Reduce rope stress with slow starts and stops
- j. Keep wire rope slings well lubricated and inspect them often. Use non-acidic lubricants
- k. Store slings on racks in a clean, dry place and protect from corrosion

**8. Things to avoid when using wire rope slings**

- a. Do not bend slings around sharp edges. Protect them by using corner saddles, padding, or wood blocks
- b. Do not force, hammer or wedge slings or fittings into position. They must fit freely
- c. Never join wire rope slings made from different lays of rope together as it can seriously affect the lifting capacity
- d. Do not use slings with knots
- e. Never attempt to shorten or tie wire rope slings
- f. Never shock load wire rope slings
- g. Never shock load wire rope slings
- h. Do not use a single leg hitch on a load that cannot be controlled. Rotation of a load can undo the wire rope strands and weaken the rope

**9. Things to avoid when using slings**

- a. Do not drag slings across floors or other abrasive surfaces
- b. Do not drop slings with metal fittings

**Procedure (con't)**

**9. Things to avoid when using slings (con't)**

- c. Do not set loads down on top of slings
- d. Do not pull slings from under loads when the load is resting on the sling
- e. Do not weld anything hung from a sling
- f. Do not lengthen or shorten slings by tying knots
- g. Do not place stitch patterns (laps) on hooks, around sharp corners, or at choker bearing points

**10. Damage that makes a synthetic web sling unusable**

- a. Increased stiffness of sling material
- b. Acid or caustic burns
- c. Melted, burned or weld spatter damage
- d. Holes, tears, cuts, snags
- e. Broke or worn stitching
- f. Broke or worn stitching
- g. Knots in any part of the sling
- h. Crushed webbing or embedded particles
- i. Bleached sling colour

Figure 2  
Examples of Synthetic Web Sling Rejection Criteria

Form F-07-4 Rigging Daily Pre-use Inspection

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. The appropriate regulations and statutes should always be consulted and adhered to. Atlantic Roofers Limited/North Shore Roofing Ltd. and its affiliates do not guarantee the accuracy of, nor assume liability for the information presented here.

**General**

The majority of all construction trades are required to use ladders of one type or another on most construction sites. Through improper use, poor work habits or inadequate training and supervision, a significant number of workers are seriously injured, permanently disabled or killed each year.

Hazards Present		
● Ergonomic – force/posture	● Pinch Points	● Energy – gravity/kinetic
Protective Mechanisms		
● PPE	● Safe Work Practices/Procedures	● Manufacturers Specifications
Equipment / Tools Required		
● Extension Ladder	● Gloves	● Non-slip Boots
● Helper if needed	● Rope for Tying Ladder	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO read and follow the manufacturer’s instructions and warning labels</li> <li>● DO wear appropriate personal protective equipment such as safety footwear (with heels and slip-resistant soles) and safety glasses</li> <li>● DO manufactured portable ladders must be CSA approved</li> <li>● DO only one person is permitted to be on a ladder at any time</li> <li>● DO keep ladders away from electrical wires</li> <li>● DO ensure that the work area is clear of debris</li> <li>● DO if you become dizzy on a ladder you should drape your arms over a rung and rest your head against the ladder. Climb down slowly</li> <li>● DO wear fall protection equipment if you are working 3 metres (10 feet) or more above the ground</li> </ul>	<p><b>Do not</b> <input type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use a ladder if you feel drowsy or unwell</li> <li>● DO NOT overreach while on a ladder. Move a ladder when needed</li> <li>● DO NOT use a ladder as a brace or support for a work platform or plank</li> <li>● DO NOT use a ladder on slippery surfaces without securing the ladder’s feet</li> <li>● DO NOT use a ladder on soft ground; the legs could sink into the ground</li> <li>● DO NOT paint a wooden ladder</li> <li>● DO NOT carry objects in your hands while climbing a ladder. Hoist materials or use a tool belt</li> <li>● DO NOT place a ladder on a box, cart or other unstable surfaces</li> <li>● DO NOT use a ladder in a passageway, doorway, driveway or other location where a person or vehicle could hit it. Set up suitable barriers or lock doors</li> <li>● DO NOT work or climb higher than the fourth rung from the top of a ladder</li> <li>● DO NOT extend the top section of a ladder from above or by "bouncing" on it</li> </ul>
---	---

<p><b>Procedure</b></p> <p><b>1. Selection and inspection</b></p> <ol style="list-style-type: none"> <li>a. Wear appropriate personal protective equipment</li> <li>b. Use a ladder that is designed for the task. Check the ladder’s length, strength/grade and type/use.</li> <li>c. Use a fiberglass ladder when doing electrical work or when working in close proximity to electrical equipment</li> </ol>
---

**Procedure (con't)**

**1. Selection and inspection (con't)**

- d. Inspect the ladder prior to each use for the following;
  - i. Damaged or worn non-slip feet
  - ii. Loose nails, screws, bolts or nuts
  - iii. Rotted, decayed or warped rails on wooden ladders
  - iv. Cracked or exposed fiberglass on fiberglass ladders
  - v. Cracked, split, worn or broken rails, braces, steps or rungs
  - vi. Sharp edges on rails and rungs
  - vii. Rough or splintered surfaces
  - viii. Corrosion, rust, oxidation and excessive wear
  - ix. Twisted or distorted rails (check by sighting along the rails)
  - x. Missing identification labels
  - xi. Loose, broken or missing extension locks
  - xii. Defective locks that do not seat properly when extended
  - xiii. Sufficient lubrication of working parts
  - xiv. Defective cords, chains or ropes
- e. Do not use a broken or unsafe ladder, attach a warning tag, take it out-of-service and advise your supervisor
- f. Use a fiberglass ladder when doing electrical work or when working in close proximity to electrical equipment.

Figure 1

**2. Operation**

- a. Get help when handling a heavy or long extension ladder
- b. Check for overhead electrical wires or other hazards before setting up the ladder
- c. Clear the area around the base of the ladder of debris and other objects
- d. Set up barricades and warning signs wherever necessary
- e. Place the ladder on a firm, level surface and ensure it is secure
- f. Erect the ladder so the upper section rests on (in front of) the bottom section (i.e. the bottom section faces the wall or supporting surface)
- g. Two workers are required to set up a ladder weighing more than 25 kg (55 lb) or where conditions complicate the task**
- h. Method for TWO (2) workers setting up the ladder**
  - i. Lay the ladder on the ground close to the intended location
  - ii. One worker braces the ladder's base with his/her feet
  - iii. The other worker grabs the top rung with both hands, raises the top end of the ladder over his/her head and walks toward the base of the ladder. Grasp the centre of the rungs
  - iv. Move the erect ladder to the desired location. Lean it forward against the resting point
- i. Method for ONE (1) worker setting up the ladder**
  - i. Place the bottom of the ladder firmly against the base of the wall or stationary object
  - ii. Lift the top of the ladder and push upwards to raise the ladder to a vertical position
  - iii. Transfer the ladder to its required position when it is erect
  - iv. iv) Keep the ladder upright and close to your body with a firm grip

**Procedure (con't)**

**2. Operation (con't)**

- j. Place the ladder's feet so that the horizontal distance between the feet and the top support is 1/4 of the working length of the ladder. The ladder should be leaning at a 75 degree angle from the ground (See Figure 2)
- k. Raise and lower the ladder from the ground. Ensure that the locking ladder hooks are secure before climbing the ladder
- l. Erect the ladder so that approximately one metre (3 ft) extends above a landing platform (See Figure 3)
- m. The first person up the ladder will tie the top of the ladder at support points. A second person will hold the ladder steady. Install eye screws out of sight for tying the ladder if required**
- n. Maintain the minimum overlap of sections as noted on the ladder's label
- o. Brace or tie off the ladder near the base. If there is no structure to tie off to, use a stake. Leave the tie-off in place until the ladder is taken down (See Figure 4)
- p. If your boots are muddy then clean the soles before climbing the ladder. Avoid climbing with wet soles. Ensure your footwear is in good condition
- q. Face the ladder when climbing up or down. Keep your body centered between the side rails
- r. Maintain a firm grip. Use both hands when climbing. Grasp the rungs
- s. Maintain three point contact by keeping two hands and one foot, or two feet and on hand on the ladder at all times
- t. The method for lowering a ladder is the reverse of erecting it

Figure 2

**3. Storage and Maintenance**

- a. Clean a fiberglass ladder every three months. Spray it lightly with a clear lacquer or paste wax
- b. Protect a wooden ladder with a clear sealer or wood preservative
- c. Return ladders to the designated storage area after use
- d. Store ladders where they are protected from the weather
- e. Keep ladders clean and free of foreign materials
- f. Keep wooden ladders in a well-ventilated location, away from dampness and excessive heat

Figure 3

Figure 4

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Effective hazardous energy control procedures will protect employees during machine and equipment servicing and maintenance where the unexpected energization, start up or release of stored energy could occur and cause injury, as well as while working on or near exposed de-energized electrical conductors and parts of electrical equipment.

Hazards Present		
● Crushing Injuries	● Electrocution	● Being Thrown From
Protective Mechanisms		
● PPE	● Safe Work Practices/Procedures	● Manufacturers Specifications
Equipment / Tools Required		
● Energy Isolating Device	● Tags	● Locks
● Chains	● Wedges	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO ensure lock-out devices are singularly identified. They shall be the only devices used for controlling energy and shall not be used for other purposes</li> <li>● DO ensure the lock-out device indicates the identity of the employee applying the device</li> <li>● DO make sure lock-out is used when working on or near exposed de-energized electrical circuits/parts</li> <li>● DO ensure all machines/equipment be locked out to protect against accidental operation when operation could cause injury to personnel</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT attempt to operate any switch, valve, machine, equipment which is locked out</li> <li>● DO NOT remove any lock-out device unless you are the person who applied it</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Machine or Equipment Shutdown</b> <ol style="list-style-type: none"> <li>a. All affected employees shall be notified that a lockout system is to be utilized and the reason for it, before the controls are applied</li> <li>b. If the machine or equipment is operating, shut it down by normal stopping procedure (Depress stop button, open toggle switch, etc.)</li> </ol> </li> <li>2. <b>Machine or Equipment Isolation</b> <ol style="list-style-type: none"> <li>a. Physically locate and operate the switch, valve, or other energy isolating devices so that the equipment is isolated from its energy sources and apply adequate hardware.</li> </ol> </li> <li>3. <b>Lockout Device Application</b> <ol style="list-style-type: none"> <li>a. Authorized employees shall lockout the energy isolating devices with assigned individual locks</li> <li>b. Lockout devices shall be applied so that they will hold the energy isolating devices in a “Neutral” or “Off” position</li> <li>c. Install a personal lock and complete “<b>DO NOT OPERATE</b>” tag on the locking device of the equipment, if so equipped. Sign and date the tags stating the reason for the disconnect</li> <li>d. Turn off the power supply valves and disconnect the power supply hose. When it is not possible to install a lock, secure the circuit by another practical and safe means and attach a completed tag</li> <li>e. If more than one person is working on locked out equipment, each person will attach his own lock and tag</li> </ol> </li> </ol>
---

**Procedure (con't)**

**4. Stored Energy**

- a. All stored or residual energy in rams, flywheels, springs, pneumatic, or hydraulic systems, etc. shall be blocked or dissipated. If there is a possibility of re-accumulation of stored energy, verification of isolation must be continued until servicing or maintenance is completed

**5. Verification of Isolation**

- a. Prior to starting work on machines or equipment that have been locked and after ensuring that no personnel are exposed, the authorized employee shall operate the push button or normal operating controls to verify that the appropriate equipment or machine has been de-energized and make certain it will not operate
- b. Check that the power supply is disconnected, if no lock out is possible. Use a voltage tester to check all electrical circuits. Ensure the tester is operational

**Caution:** Return Operating Controls to the “Neutral” or “Off” Position after the Test.

- c. The machine / equipment is now locked out. Servicing or maintenance may now occur

**6. Removal of Lockout Device**

- a. Before turning the power back on ensure that no one will be endangered by starting the equipment
- b. When the repairs are completed connect the hoses and/or remove locks and tags
- c. The equipment operator **MUST** be informed
- d. No one shall leave the property without removing his lock
- e. **Do not remove another person's lock**, promptly report any irregularities in the procedure to your supervisor
- f. A Supervisor upon complete investigation of the circumstances may remove a “LOCK OUT” and will take full responsibility for the action

**7. Uncompleted Jobs**

- a. Uncompleted jobs where the equipment is “SAFE TO OPERATE” follow step 6 a to 6 c
- b. Uncompleted jobs where equipment is **Not safe to operate a clearly completed status tag must be installed indicating the problem and who to contact.**
- c. The equipment operator and the area Supervisor must be informed of the status of repairs

**General**

Whether lifting is an everyday job or an occasional task, lifting improperly can cause serious injury regardless of the weight of the object or the physical condition of the person lifting the object. Always follow proper lifting procedures to reduce the risk of injury. Being physically ready to do the job can further reduce the risk of injury. For example, doing a few basic exercises before starting work can warm up the body and prepare it for strenuous work.

Hazards Present		
• Muscular Injuries	• Falling Objects	• Tripping
Protective Mechanisms		
• PPE	• Safe Work Practices/Procedures	• ERP (Emergency Response Plan)
Equipment / Tools Required		
• Back Support where continuous heavy lifting is required		

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO tuck in the chin to keep the back as straight as possible while lifting</li> <li>• DO lift with the strong leg muscles</li> <li>• DO ask for help with the heavy, awkward items</li> <li>• DO when possible, use mechanical equipment to move heavy items</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT try to lift an item that is too heavy or awkward</li> <li>• DO NOT use your back muscles to do lifting</li> <li>• DO NOT twist your body while carrying an object</li> <li>• DO NOT attempt team lifting without proper coordination</li> </ul>
---	--

**Procedure**

- 1. Planning**
  - a. Size up the load and check overall conditions
  - b. Don't attempt the lift by yourself if the load appears to be too heavy or awkward
  - c. Check that there is enough space for movement, and that the footing is good
  - d. "Good housekeeping" ensures that you won't trip or stumble over an obstacle

- 2. Lifting**
  - a. Make certain that your balance is good.
  - b. Feet should be shoulder width apart, with one foot beside and the other foot behind the object that is to be lifted.
  - c. Bend the knees, don't stoop
  - d. Keep the back straight, but not vertical (There is a difference, tucking in the chin straightens the back)
  - e. Grip the load with the palms of your hands and your fingers. The palm grip is much more secure. Tuck in the chin again to make certain your back is straight before starting to lift
  - f. Use your body weight to start the load moving, then lift by pushing up with the legs. This makes full use of the strongest set of muscles
  - g. Keep the arms and elbows close to the body while lifting

Wrong way to lift

Correct way to lift

**Procedure**

**3. Carrying**

- a. Carry the load close to the body. Don't twist your body while carrying the load. To change direction, shift your foot position and turn your whole body
- b. Watch where you are going!

**4. Lowering**

- a. To lower the object, bend the knees. Don't stoop
- b. To deposit the load on a bench or shelf, place it on the edge and push it into position
- c. Make sure your hands and feet are clear when placing the load

**Note:** Make it a habit to follow the above steps when lifting anything-even a relatively light object.

**5. Team Lifting**

- a. If the weight, shape, or size of an object makes the job too much for one person, ask for help
- b. Ideally, workers should be of approximately the same size for team lifting
- c. One individual needs to be responsible for control of the action to ensure proper coordination
- d. If one worker lifts too soon, shifts the load, or lowers it improperly, either they or the person working with them may be injured
- e. Walk out of step, do not keep your feet moving at the same time as your lifting partner

**6. Lifting Heavy Objects**

- a. Safe lifting of heavy items requires training and practice. For example, we've probably all seen a small person move heavy feed sacks with apparent ease
- b. The secret lies in taking the proper stance and grip
- c. When equipment is available, it should be used to lift and carry heavy objects
- d. Loaders, forklifts, hoists, carts, etc. are made for this purpose

Guideline Maximum Handling Loads

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

It may be necessary to bend metal on the job site or in other company facilities. If done properly and with respect for company health and safety policies and procedures, the operation can be done smoothly and safely.

<b>Hazards Present</b>		
● Cuts	● Pinch Points	● Eye Injury
<b>Protective Mechanisms</b>		
● PPE	● Safe Work Practices/Procedures	● ERP (Emergency Response Plan)
<b>Equipment / Tools Required</b>		
● Tape Measure	● Sheet Metal	● Safety Glasses / Gloves

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO practice good housekeeping</li> <li>● DO ask for help with the heavy, awkward items</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT overstrain yourself</li> <li>● DO NOT work without safety equipment</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Planning</b> <ol style="list-style-type: none"> <li>a. Be sure to have the bending equipment, your tools and yourself in a safe place out of the way of danger</li> <li>b. Always wear the proper PPE as per company policy</li> <li>c. Check that there is enough space for movement, and that the footing is good</li> <li>d. "Good housekeeping" ensures that you won't trip or stumble over an obstacle</li> </ol> </li> <li>2. <b>Preparing to Bend</b> <ol style="list-style-type: none"> <li>a. Put on PPE</li> <li>b. Confirm the gauge, color and type of metal needed to do the job</li> <li>c. Select the smallest possible piece of metal that is still large enough for the job. If the selected piece is too large to handle safely, get assistance</li> <li>d. Lay the metal out flat in a safe location</li> <li>e. Determine where slicing is required in order to cut the metal down to a manageable size</li> <li>f. Make necessary markings</li> </ol> </li> <li>3. <b>Slicing the Metal</b> <ol style="list-style-type: none"> <li>a. Carefully insert the metal into the bender to the proper markings for slicing (keep in mind that the slice will happen at approx. 1.5 inches from the bender's guide rail)</li> <li>b. Set cutting tool onto its rail system</li> <li>c. Using steady even pressure, slide the cutting tool along the rails, allowing it to slice through the metal</li> <li>d. Be sure that the side of the cut that is furthest from the bender is permitted to fall downward. With larger pieces of metal, you should be using two people at this point</li> <li>e. Once the slice is complete, pick up the piece of metal that has been cut off and is not secured in the bender and set it aside in a safe place</li> <li>f. Carefully remove the piece that is locked into the bender and set it aside in a safe place</li> <li>g. Continue repeating procedure 2 and 3 until all necessary slicing is complete</li> </ol> </li> </ol>
--

**Procedure**

**4. Bending the Metal**

- a. Once all slicing is completed, move on to making required bends in the sliced pieces
- b. Select piece to be bent and lay it flat in a safe place to work
- c. Confirm correct bending specs
- d. Make necessary markings for bend locations
- e. Ensure bender is in the open position and slide the metal into the bender, aligning the marks where the bend is needed
- f. Clamp down the bender into the closed position
- g. Double check that the landmark markings are aligned properly
- h. Plant both feet securely on step
- i. If the gauge of the metal is such that it requires two people to bend it, both people must have at least one foot on the step each
- j. Firmly grasp the bender's handles and make the necessary bend
- k. Return the handles to the neutral position
- l. Place one hand on the bent piece of metal and one hand on the top handle
- m. Pull the handle towards yourself to unclamp the metal
- n. Repeat steps 4c. through 4m. until all necessary bends are made.

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

It may be necessary to bend metal on the job site or in other company facilities. If done properly and with respect for company health and safety policies and procedures, the operation can be done smoothly and safely.

<b>Hazards Present</b>		
● Cuts	● Falling Objects	● Fall from Roof
<b>Protective Mechanisms</b>		
● PPE	● Safe Work Practices/Procedures	● ERP (Emergency Response Plan)

**General**

Boom lifts are common on any job site that requires personnel to perform elevated work in hard to reach places. Articulated joints and extendable boom arms allow the operator to access work areas located above obstacles or other areas that are not safe for a standard scissor lift.

Hazards Present		
<ul style="list-style-type: none"> <li>● Tip Over</li> <li>● Falls</li> </ul>	<ul style="list-style-type: none"> <li>● Dropping tools/Material</li> <li>● Power Lines</li> </ul>	<ul style="list-style-type: none"> <li>● Pedestrian Traffic</li> <li>● Vehicle Traffic</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Manufacturer’s Specifications</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practices/Procedures</li> <li>● Training</li> </ul>	<ul style="list-style-type: none"> <li>● ERP (Emergency Response Plan)</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>● Operators Certificate</li> <li>● Fall Protection PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Installation Materials</li> <li>● Equipment Inspection Form</li> </ul>	<ul style="list-style-type: none"> <li>● Barricades/Warning Tape</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO wear appropriate personal protective equipment (PPE)</li> <li>● DO know the “Emergency Response Plan”</li> <li>● DO ensure operator has been properly trained</li> <li>● DO follow procedures at all times</li> <li>● DO familiarize yourself with manufacturers specifications</li> <li>● DO perform and record full equipment inspection before daily use</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use lift if not qualified</li> <li>● DO NOT work without safety equipment</li> <li>● DO NOT use if working platform is not working properly or if any part is damaged, work or missing</li> <li>● DO NOT drive near drop-offs or holes</li> <li>● DO NOT raise platform or drive on uneven or soft surfaces</li> <li>● DO NOT use without guardrails, mid rails, chain, or bar in place</li> <li>● DO NOT raise platform in extreme windy or gusty conditions</li> <li>● DO NOT exceed rated load capacity</li> <li>● DO NOT stand or sit on guardrails</li> <li>● DO NOT use under the influence of alcohol or drugs</li> <li>● DO NOT override safety devices</li> <li>● DO NOT use ladder, scaffolding, or other devices to increase working height of platform</li> <li>● DO NOT attach ropes or chains to guardrails or use as a crane</li> </ul>
---	---

**Procedure**

**1. Pre-Start Checks**

- a. Perform and fill out the boom lift daily inspection record
- b. Check for obstacles around the work platform and in the path of travel such as holes, drop offs, debris, ditches and soft fill

**Procedure (con't)**

**1. Pre-Start Checks (con't)**

- c. Check for overhead clearances
- d. Electrocution Hazard: The machine is not insulated. Maintain safe clearances from the electrical power lines and apparatus. You must allow for platform sway, rock or sag. The work platform does not provide protection from contact with a proximity to an electrically charged conductor
- e. Make sure the batteries are fully charged (if using electric lift). Disconnect battery-charging system from external power source
- f. Check fuel and fluid levels
- g. Put on suitable fall arrest harness. Adjust harness so it fits properly and check the condition

**2. Start and Operation**

- a. Pull out the emergency stop button on the base control panel
- b. Select “platform” with off/platform/base select key switch
- c. Enter the basket
- d. Close entrance gate or hook entrance chain
- e. Fasten the fall arrest lanyard to the D ring provided on the platform.
- f. Depress the safety switch to activate the platform controls. The safety switch will either be a foot pedal located on the platform or a red lever mounted to the "Drive/Lift" joystick
- g. Set the operation function switch to "Drive". Move the boom lift forward and then reverse. Turn the wheels left and right. Run through all the operations of the boom arms, including raise, lower, extend, retract, and basket tilt. Turn off the boom lift. Unhook your lanyard and climb out of the basket
- h. Walk in the area between the boom lift and your work area. Look for unstable soil and obstacles that need to be addressed. Inspect the work area for power lines and overhead hazards. When you are satisfied that the area is safe, drive the boom lift to the work area. Do not forget to secure your lanyard to the basket anchor point
- i. Position the boom lift as close to the work area as possible. Set the safety outriggers, if equipped. Raise the boom arm attached to the basket. Extend the second boom arm to gain additional height. Raise the articulated boom. It is important to raise the booms in this order to maintain the stability of the boom lift
- j. Adjust the height and angle of each boom arm to reach your work area. Alternate your gaze to ensure that you will not come into contact with any obstacles. Be aware of pinch points that could pin you to the top rail of the basket. When in a tight area, remember the order in which you adjusted the boom arms. This will make it easier for you to exit the work area
- k. Proceed with job using the required buttons, levers and controller located on the operator console
- l. The boom lift is equipped with a high and low range for travel. It can be used in high range in open travel ways, but should be used in low range in tight areas
- m. If painting or other potential messy work is being done while on the scissor lift, cover up the platform, handrails and controls to minimize overspray or splashing on the boom lift

**3. Shutdown Procedure**

- a. Lower all boom arms into their locked positions. Start with the boom closest to the base and work your way to the boom arm connected to the basket.
- b. Lower the basket to an elevation that is safe for your exit
- c. Turn off the red "Emergency Stop" button located on the platform control panel
- d. Disconnect your lanyard from the platform anchor point
- e. Walk to the base of the boom lift and remove the key from the "Ignition"
- f. Plug-in the boom lift if it runs on electric

**Procedure (con't)**

**3. Shutdown Procedure (con't)**

- g. Check the fuel level of the boom lift if it is gas, diesel, or propane powered. If fuel, ensure the lift is filled
- h. If you are finished with the Scissor Lift, clear all tools, debris, etc., from the platform
- i. Ensure the lift is clean

**\*\* The number one rule when operating a boom lift is safety. Improper use or failure to heed warning alarms can result in serious injury or death.**

--	---

<p><b>Procedure</b></p> <p><b>1. Pre-Start Checks</b></p> <ol style="list-style-type: none"> <li>a. Forklift should only be operated and maintained by a competent employee who has been instructed in the machine’s operation and must be familiar with the Safety and Operating Procedures</li> <li>b. Know the recommended load limit of the forklift and never exceed it</li> <li>c. Know how to assess the weight of the load to be lifted.</li> <li>d. Do a visual and operational check of the forklift at the start of the shift. Fill out and ensure inspection records are maintained.</li> </ol>
---

**Procedure (con't)**

**1. Pre-Start Checks (con't)**

- e. Check for adequate overhead clearance before raising the load
- f. Know the blind spots of the lift with and without a load
- g. Keep pedestrians away from a forklift in operation
- h. Stop when anyone crosses the route being travelled. Lower the load to the ground, and wait until clear
- i. Wear leather gloves when moving or shifting loads or when checking skids
- j. Wear fully laced safety boots to give impact protection when moving loads or skids and to provide ankle support when mounting and dismounting lift
- k. Remain alert and prepare for the unexpected
- l. Keep hands, arms, head, feet and legs inside the confines of a moving forklift
- m. Report any collisions, damage or near-miss accidents to a supervisor immediately
- n. Do not park fork lift so as to block emergency exits or doorways
- o. Seatbelts are required to be installed and used on all powered mobile equipment fitted with rollover protection (ROPS). If forklift is not equipped with ROPS, then this does not apply
- p. Do not operate a forklift that has a maintenance problem, or is not safe to operate. Remove the key from the ignition switch and put an “Out of Service” tag on the forklift. Notify maintenance department

**2. Loading**

- a. Check the rating capacity on the forklift nameplate
- b. Determine if the load weight is within the capacity of the forklift. Note that for every one inch further away from the carriage that the load is placed, there is a loss of approximately 100 pounds carrying capacity
- c. The forklift should be started with the forks down
- d. Lift the forks to 3 inches

**3. Lifting a Palletized Load**

- a. Drive to the pallet. This applies to either a pallet on a lower or upper shelf. Stop with the forks 3 inches from the load
- b. Level the mast. The mast must be at right angles to the load
- c. Raise the forks to 1 inch below the slot on the pallet
- d. Drive forward into the pallet
- e. Lift forks 4 inches
- f. Tilt back load until secured for travel. If load will obscure vision drive the lift in reverse taking care while turning as the extra swing may cause load instability
- g. Look back. Honk. Drive back so that load clears the pallets below
- h. Lower the load to 3 inches above ground. Do not drag forks on the ground
- i. Materials and equipment are to be loaded on the forklift in a manner that prevents any movement of the load that could create a hazard to workers or others
- j. All loads that could be subject to shifting during transport are to be restrained if shifting would result in the forklift becoming unstable

**4. Picking up Drums**

- a. Place drums securely on a pallet. If there is any possibility of shifting of the drums, have drums strapped together to minimize movement
- b. Tilt mast forward, slide fork tips along ground to position forks under object, raise forks and tilt back slightly to prevent shifting of the drums
- c. If drums are filled with liquid, be careful to drive slowly as the fluid in the drums may cause shifting during transportation

**Procedure (con't)**

**5. Travelling**

- a. Do not drive with arms, head or legs outside the confines of the forklift
- b. Always wear your seatbelt while operating a forklift
- c. Turn forklift only when the forks are lowered to a safe travelling height
- d. Ensure that the operating (road) surface is free from ice, use tire chains if required
- e. Avoid operating forklifts in high volumes of pedestrians. Wait for a quieter time to deliver to busy congested areas
- f. When operating in areas of pedestrian traffic minimize risk to others by cordoning off areas with signage and/or traffic cones to prevent walk through traffic
- g. Use horn as a warning device for oncoming pedestrians
- h. Drive to point of deposit, position the forklift in front of deposit area

**6. Unloading Pallets**

- a. Raise load 5-10 inches above the unloading point (space permitting)
- b. Drive forward stopping 3-4 inches in front of deposit point
- c. Tilt mast forward to a right angle position so load is level
- d. Drive forward until load is aligned with corners of the stack
- e. Stop, lower load to resting-place, stack pallets loaded with cases, cartons straight and square stagger the top tier to "tie-in place"

**7. Unloading Round Objects**

- a. Stack round objects together tight and straight
- b. Hold securely in place with wedges
- c. To nest round objects - place the bottom tier tightly together and secure with wedges. Place wedges against each roll in the bottom for a more secure stack
- d. Look behind you. Back up so that forks clear other pallets
- e. Lower forks to 3 inches from the ground

**8. Parking**

- a. Tilt the upright forward until the forks are level or flat on the floor
- b. Apply the parking brake and place transmission in neutral, chock the wheels if you have any doubt about the forklift moving

**9. Operations on Grades and Ramps**

- a. Never turn on an angled grade
- b. Keep unloaded forks facing downgrade
- c. When driving a loaded forklift up a grade, ensure that forklift is driven forwards
- d. When driving a loaded forklift down a grade, the forklift must be driven in reverse

**General**

Taking heavy equipment to a service station or central location for refueling is not always practical, sometimes the fuel must be brought to the equipment. Refueling machinery and equipment can lead to an explosion if the fuel is not stored and handled properly.

Hazards Present		
● Fire	● Explosion	● Spills
Protective Mechanisms		
● Manufacturer’s Specifications	● Safe Work Practices/Procedures	● ERP (Emergency Response Plan)
● PPE	● SDS	● Training
Equipment / Tools Required		
● Approved Container	● Gloves / Eye Protection	● Spill Kit

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO wear appropriate personal protective equipment (PPE)</li> <li>● DO know the “Emergency Response Plan”</li> <li>● DO store flammable liquids in approved containers</li> <li>● DO turn off motor before fueling</li> <li>● DO clean up spills</li> <li>● DO close all containers when you are finished</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT smoke or use open flame while fueling</li> <li>● DO NOT use plastic, glass or other makeshift containers to store flammables</li> <li>● DO NOT leave your vehicle’s engine running when filling</li> <li>● DO NOT mix even a small amount of gasoline with kerosene or diesel fuel</li> <li>● DO NOT use a plastic funnel to fill a portable fuel container. The funnel will act as an insulator and promote the generation of static electrical charges</li> </ul>
---	--

**Procedure**

**1. Before Refueling**

- a. Store flammable or combustible liquids in approved containers.
- b. Transport fuel to the equipment in approved containers designed for this purpose. All containers used to handle gasoline must be approved by Underwriters Laboratories (UL), Canadian Standards Association (CSA) or some other recognized testing organization
- c. Never use plastic containers, glass bottles, or other makeshift containers to store or handle gasoline and other flammable materials
- d. Always turn off the motor before refueling
- e. Do not smoke or use open flames within 50 feet of areas where fuel is stored and where machines or equipment are refueled
- f. Store a fire extinguisher, rated not less than 20 BC, within 75 feet of refueling area and know how to use it
- g. Always clean up spills before starting the engine
- h. Wash off gasoline from your hands or skin with soap and water
- i. Change your clothes immediately if you get gasoline on them

**Procedure (con't)**

**2. Refueling**

- a. Confirm the type of fuel for the piece of equipment (eg; gasoline or diesel)
- b. Turn the motor off
- c. Determine where the fuel fill opening is located with respect to a hot engine, exhaust pipe, or other ignition source. If it is located where fuel could spill and contact the ignition source, the equipment should be allowed to cool off before refueling begins
- d. Ensure dispensing devices and nozzles are approved by UL, CSA or some other approved testing organization. Approved hoses and nozzles attached to fuel pumps should be equipped with bonding wires to bond the equipment to the supply vehicles when the nozzle contacts the metal fill spill spout
- e. Use a non-conductive step ladder if necessary to reach fueling area of equipment
- f. Remove fuel cap from equipment
- g. Remove cap from fuel container and insert pour spout
- h. Place fuel container spout carefully into fueling spout of equipment, tip container carefully to empty fuel from container into equipment, ensure that equipment is not overfilled
- i. Replace fuel cap on equipment
- j. Shut off fuel pumps and close all containers when you are finished refueling
- k. Clean up any spills before starting the engine

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

- c. Enter the platform
- d. Close entrance gate or hook entrance chain.
- e. Fasten the fall arrest lanyard to the D ring provided on the platform
- f. Pull out the emergency stop button on the platform control panel
- g. Proceed with job using the required buttons, levers and controller located on the operator console
- h. The scissor lift is equipped with a high and low range for travel. It can be used in high range in open travel ways, but should be used in low range in tight areas
- i. If painting or other potential messy work is being done while on the scissor lift, cover up the platform, handrails and controls to minimize overspray or splashing on the scissor lift

**3. Shutdown Procedure**

- a. Fully lower the platform
- b. Push the emergency stop buttons
  - i. On the operator console
  - ii. On the base control panel
- c. Turn the base key switch to the off position
- d. If you are finished with the Scissor Lift, clear all tools, debris, etc., from the platform
- e. If electric, plug the Scissor Lift in to recharge the battery
- f. If fuel, ensure the lift is filled
- g. Ensure the lift is clean

**General**

During an inspection, activities and conditions in the workplace are carefully examined to measure compliance with company rules, policies, procedures and legislation. Situations that have the potential to cause injury or damage (sometimes called unsafe acts and conditions) are identified and corrective action is initiated.

Hazards Present		
<ul style="list-style-type: none"> <li>● Inhalation of Fumes</li> <li>● Burns</li> </ul>	<ul style="list-style-type: none"> <li>● Slips/Trips</li> <li>● Cuts/Bruises</li> </ul>	<ul style="list-style-type: none"> <li>● Falls</li> </ul>

---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Before you go</b> <ol style="list-style-type: none"> <li>a. Have forms and required items on hand</li> <li>b. Bring the site contact phone number with you</li> <li>c. Acquaint yourself with the general layout of the work area</li> <li>d. Get and fit safety equipment that may be required</li> <li>e. A camera is useful for later reference (small pocket camera or cell phone). Keep a written log of where and what you took a picture of</li> <li>f. A small flashlight is useful for enclosed rooms and in between walls</li> <li>g. A pocket tape measure can be a handy item</li> </ol> </li> <li>2. <b>Upon arrival at job site</b> <ol style="list-style-type: none"> <li>a. Identify the inspection team</li> <li>b. Review reports from previous inspection</li> <li>c. Ensure you have all the necessary equipment and PPE to do the inspection</li> </ol> </li> </ol>
---

**Procedure (con't)**

**3. Conducting the inspection**

- a. Proceed with the inspection tour
- b. During the tour, get off the “beaten path”
- c. Look over, under, around, behind, inside, etc
- d. Take the time to observe the activities of all personnel
- e. Take immediate corrective action where there is imminent danger
- f. Record all unsafe acts and conditions

**4. Completion of inspection**

- a. Rank the unsafe acts/conditions on a “worst case first basis”
- b. Identify corrective action required for each unsafe act/condition
- c. Assign a person responsible for each corrective action and a date for completion
- d. Distribute copies of the inspection report to all employees at safety meeting
- e. Maintain records for management review and considerations

**General**

Although available for use for rescue professionals, the Rollgliss rescue kit has been designed as a “peer rescue system” for use in industrial environments. It is designed to enable a rescue to be performed by a person or persona where rescue is not part of their normal job function. \* The user can either be raised OR lowered to safety.

Hazards Present		
<ul style="list-style-type: none"> <li>• Cuts/Bruises</li> <li>• Broken Bones</li> </ul>	<ul style="list-style-type: none"> <li>• Slips/Trips</li> </ul>	<ul style="list-style-type: none"> <li>• Falls</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>• PPE</li> </ul>	<ul style="list-style-type: none"> <li>• Safe Work Practices/Procedures</li> </ul>	<ul style="list-style-type: none"> <li>• Fall Protection Training</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>• Safety Harness</li> <li>• Rope Grabs</li> </ul>	<ul style="list-style-type: none"> <li>• Rollgliss Rescue Equipment</li> <li>• Anchor Systems</li> </ul>	<ul style="list-style-type: none"> <li>• Safety Ropes</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO inspect equipment to ensure all parts are there and not damaged</li> <li>• DO always seek medical attention as first action</li> <li>• DO maintain positive communication with the person being rescued</li> <li>• DO repeat rescue training frequently</li> <li>• DO use a second rescue person if available</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT leave person suspended for more than 15 minutes</li> </ul>
---	---

**Procedure**

**1. Anchorage**

- a. Identify a suitable anchorage location for the anchorage straps. This location should be rated for at least 3,300 lbs
- b. Remove the anchorage strap from the larger kit bag and position as directly above the person to be rescued as possible
- c. Secure it in place by attaching the carabiner on the descender to the strap or other suitable anchorage connector

**2. Set the Rope Distance**

- a. Lower the large safety hook located at the end of the rope down towards the D-ring of the person to be rescued. (May be frontal or back but back D-ring is recommended to pose the least interference)
- b. If the length of the rope from the descender is insufficient to reach the rescue, more rope can be fed through the descender by slowly rotating the red handle upwards, while pulling the rope through the descender
- c. When the correct length has been attained, rotate the red handle back to its original position

**Procedure (con't)**

**3. Set the Pole Length and Hook**

- a. Once the rope length has been determined, retrieve the hook and keep it to one side
- b. Remove the adjustable pole from the bag and secure the safety rope at the base of the pole to the structure to prevent it being dropped during the rescue
- c. Extend the pole using the adjusters to a sufficient length to reach the person to be rescued
- d. Retrieve the pole and then connect the hook to the end in the open position

**4. Connection**

- a. a) While holding the rope along the length of the pole to prevent the hook from disengaging, lower the pole to the suspended worker
- b. b) Fit the hook into the D-ring of the safety harness. Once the D-ring is well within the hook throat, pull the pole upward to release the latch
- c. c) The hook should now be secured on to the person to be rescued
- d. d) Retrieve the pole and place it in a secure location out of the immediate work area

**5. Remove the Slack**

- a. Pull the excess/loose rope back through the descender until no slack remains
- b. This part of the rope is known as the free end

**6. Install the Haul System Top**

- a. Remove the mini-haul system from the storage bag.
- b. Retract the locking mechanism on the top ascender to enable the rope to slide through it.
- c. Place the free end of the rope (haul side) within the top ascender and lock the mechanism in place
- d. The top ascender is the one with the free end of the mini haul rope

**Procedure (con't)**

**7. Install the Haul System Bottom**

- a. Retract the locking mechanism on the bottom ascender to enable the rope to slide through it
- b. Place the ascender over the tightrope (load side) between the descender and the suspended worker's D-ring and lock the mechanism in place
- c. Attach the gripping handle to the free end of the mini-haul system rope

**8. 8) Raise the Rescuer**

- a. While holding the gripping handle in one hand, pull the free end of the haul system
- b. The pulleys will travel together to lift the person to be rescued in an upwards motion
- c. During this action, the person will be held up by the descender
- d. If it is necessary to repeat this step, the ascenders can be re-positioned simply by moving the top ascender up towards the descender and sliding the bottom ascender down towards the rescuee
- e. This step may be required to be performed multiple times to enable sufficient slack to be created in the rescuee's primary fall arrest device
- f. At this time, the decision on whether to raise or lower the person being rescued needs to be made
- g. There are many factors to reaching this decision such as:
  - i. Obstacles below the person
  - ii. Level / Nature of injury
  - iii. Location of medical assistance
  - iv. Time of suspension
- h. In most cases, it will be easiest, quickest and safest to lower the person; however this can only be determined in the specific circumstances faced during the event

**9. Secondary System in Place**

- a. **If person is retained in position by a self-retracting lifeline:** the motion of raising them should unlock the device and allow them to be lowered to the ground with both the rescue device and SRL in place
- b. **If person is retained by a deployed shock absorbing lanyard:** the raising motion will allow their lanyard to be unhooked from the anchorage and to be lowered, however this will not enable a secondary device to remain in place. It is very important to ensure the person is properly retained prior to removing their lanyard

**10. Lowering the person being rescued**

- a. Prior to descent, the mini-haul system pulleys must be removed from the rope. Loosen the locking mechanisms of the ascenders by sliding them on the haul rope, then unlock the mechanisms and remove the ascenders from the rope
- b. Before lowering the rescue take the free end of the rescue rope and loop it through a second carabiner (not provided in kit) attached to the anchor strap. (optional)
- c. The rescuer will maintain a grip on the free end during the descent and will help control the descent speed with their grip on the free end of the rescue rope
- d. With the other hand, lift the red handle on the descender to commence lowering the person to the ground

**Important:** Keep fingers, hair, other rope and materials well away from the descender device during this motion to prevent entanglement

**Procedure (con't)**

**Note:** This is a friction descent device and the rate of descent of the person is controlled by the operator within a band of adjustment. The device has a dead-man handle feature that will prevent the rescue from descending if the rescuer lets go of the handle at any time. In addition, if the rescuer opens the handle too far, the device will lock off. To unlock the device and continue descent, the rescuer must move the handle back to its original position tight against the descender.

**Warning:** During the descent the casualty can reach a significant speed and care needs to be taken to ensure the lowering action is gentle to avoid the possibility of any further injury. In addition, if the person is still attached to an SRL, the device may lock off prematurely again, requiring steps 6 to 9 to be repeated, increasing the length of time the rescue remains suspended.

**11. First Aid**

- a. The person at the bottom of the working platform should now be able to touch the rescue
- b. The second rescuer should grab the rescuee’s legs in each hand and ensure they are kept in a bent position
- c. Do not bring the person’s legs together – it will be very uncomfortable for them while still suspended in the harness
- d. Once the rescuee’s buttocks also touch the ground, the second rescuer should move behind them and ensure they remain seated upright until medical help arrives
- e. If the rescue has been suspended for some time, this is the period they can be most severely impacted by a sudden rush of blood to the heart, causing blackout and/or death
- f. Only trained medical staff should attempt to treat the person
- g. The casualty should be kept calm and whether conscious or unconscious their neck should be supported and kept in an upright position to minimize spinal injury and ensure the airway is kept open
- h. Any open, bleeding wounds should be attended to as a matter of urgency

**12. Inspection**

- a. After the rescue is complete, inspect the system
- b. Check the entire rope for any cuts or knots. Inspect all metal parts for any deformations or cracks
- c. Inspect all labels to make sure they are present and legible
- d. Clean any parts that have become soiled or coated with foreign materials
- e. Carefully pack all items into their appropriate bags so everything is ready for any future rescues

● Respirator	● Mask	

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO inspect your respirator for visible defects</li> <li>● DO ensure you have proper fit</li> <li>● DO make sure you receive the appropriate training</li> <li>● DO have a medical evaluation before using a respirator</li> <li>● DO dispose of disposable respirators after use</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use a respirator if you have a heart or lung problem (unless cleared for use by doctor)</li> <li>● DO NOT share respirators</li> <li>● DO NOT remove respirator in a contained environment</li> <li>● DO NOT attempt to repair a punctured or deformed face piece</li> <li>● DO NOT store a wet respirator in an airtight container, always thoroughly dry first</li> </ul>
---	--

**Procedure**

**1. Administering the Program**

- a. This code of practice sets out the requirements our company will follow for the proper selection, use and care of air-purifying respirators (APRs) as they are required for use in our workplace. Engineering Controls and proper Work Practices will remain the primary methods used to control workplace exposures. Respirators should only be used where engineering controls and work practices are not reasonable or have failed to adequately reduce worker exposure to contaminants and as outlined in applicable occupational health and safety regulation.
- b. The program administrator will be the company safety coordinator: Phone: 506-576- 6683 or Email: ohs@atlgoc.com. The program administrator reports directly to the Branch Manager on matters relating to the Health & Safety program including this code. The program administrator is authorized to manage the respiratory program and ensure that employees are trained and use the air purifying respirators in a manner that protects their health & safety.
- c. Employees are encouraged to bring all respirator issues to their immediate foreman and then, if necessary, to the program administrator. All employees and foremen must cooperate with the program administrator in the performance of the administrator’s duties
- d. This code of practice is meant to assist the employee in choosing an air- purifying respirator that gives adequate protection to the employee from hazards associated with Roofing and affiliated processes. This program covers all aspects of our operations, which may include facility, yard, maintenance and field work

**Procedure (con't)**

**2. Identifying the Hazards**

- a. Hazardous products encountered during roofing operations may include:
  - i. Mineral Spirits
  - ii. Fugitive emissions- working in industrial processing environments
  - iii. Asbestos
  - iv. Benzene solubles
  - v. Biohazards- bird droppings, mould etc.
  - vi. Polymeric Diphenylmethane Diisocyanate(polymeric MDI)
- b. Safety Data Sheets for products containing hazardous ingredients that may be used in our operations provide detailed information on the hazard potential of these ingredients and must be followed in the respirator selection process.

**Note:** The Safety Data Sheets are available at your local branch office location, and/or in your project file (in field truck). If there are any Safety Data Sheets missing, immediately contact the program administrator

**3. Selecting the Appropriate Respirator**

- a. Air- purifying respirators are intended for respiratory protection against hazardous vapours, gases and/or particulate matter. These air- purifying respirators (APR) shall only be used when there is sufficient oxygen to support life. The National Institute of Occupational Safety & Health (NIOSH) approves APR's for use in workplaces
- b. For the APR to be effective, it must first be chosen correctly (specific for the task) and worn correctly. An APR user must be trained in the correct fit, choice of cartridge and limitations of their APR .Each time the APR is put on the wearer should conduct a test of the effectiveness of the seal of the mask to their face. This is done by performing a negative or positive test as is described in Section 4.

**4. Respirator Facial Fit**

- a. Conduct a negative and positive pressure test.
- b. Negative Pressure Test: Place the palm of your hand over the in-let openings in the cartridge, inhale and hold your breath for 5 seconds. If the face piece collapses slightly under slight negative pressure and no air leaks occur you have obtained a proper seal
- c. Positive Pressure Test: To conduct a positive pressure test, cover the exhalation valve guard using the palm of your hand and exhale. If the face piece expands slightly and no leaks occur, you have obtained a proper seal

**5. Training**

- a. All employees who wear APR's shall be trained in the following:
  - i. Airborne contaminants in the workplace
  - ii. Symptoms and toxic effects of overexposure to contaminants
  - iii. Putting on and checking your APR
  - iv. Maintenance, cleaning, sanitizing and storage of your APR
  - v. What to do in case of emergency
  - vi. Provincial legislation on respiratory protection

**Procedure (con't)**

**6. Respirator Use**

- a. Face piece- inspect the face piece to make sure that the sealing flange is not distorted or damaged. Inspect all components, including the inhalation and exhalation valves to ensure they appear to be in good working order
- b. Filters- Correctly choose the filters, ensure that they are attached to the face piece with a proper seal
- c. Headband- ensure that the headband is installed correctly, and adjusted to fit the wearer correctly
- d. Grasp the respirator with one hand, the headband with the other. Place the face piece over the face with the narrow portion over the bridge of the nose. Then pull the headband over the head with one part of the cradle resting on the top the other resting behind the head. Hook the bottom headband by hooking the clips to one another. Adjust the fit as required by tightening or loosening, and then conduct a negative and positive pressure test
- e. If you become dizzy, have difficulty breathing, smell, taste, or sense any irritation from the contaminants, or if the respirator has become damaged **Leave the area immediately!**

**7. Cleaning, Maintenance & Storage**

- a. Remove filter cartridges
- b. Inspect and remove headband
- c. Remove breathing valves and inspect for damage
- d. Clean face piece and valves with soap and water
- e. Replace parts and store so they are protected against damage, contamination, dust, sunlight, extreme temperatures, excessive moisture and damaging chemicals

**8. Health Surveillance of Respirator Wearers**

- a. Some respirators increase breathing resistance. A few employees may have difficulty wearing a respirator because of a medical condition or fitness level. In such cases, the employer must ensure that employees who are affected obtain clearance from a physician before wearing a respirator. The health of employees who wear respirators should be reviewed regularly

**9. Evaluating the Program**

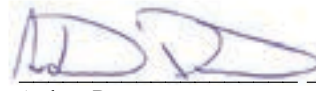

- a. At least once a year the program administrator will review the air purifying respirator program. The program administrator will consult with respirator users during the review. The review will include the following:
  - i. Effectiveness and appropriateness of the respirators being used
  - ii. Fit testing
  - iii. Respirator wearer training
  - iv. Respirator use, maintenance ,cleaning, and storage
  - v. Health surveillance of respirator users
  - vi. User suggestions for program improvements
  - vii. Possible workplace improvements to minimize APR use
  - viii. New products and technology available on the market

**Procedure (con't)**

**10. Records**

- a. Records will be kept for all employees who wear respirators. Records should include information such as:
- i. The contaminants to which the employee is exposed
  - ii. Type of respirator(s) used by employee
  - iii. Fit testing records
  - iv. Training
  - v. Medical clearance information

---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Before you operate the reciprocating saw</b> <ol style="list-style-type: none"> <li>a. Make sure you understand the manufacturer’s operation manual</li> <li>b. Secure ground area under work areas and hoisting area</li> <li>c. Rope off or post signs that work is being performed overhead. Also, barricade the area below the opening on the inside of the building</li> <li>d. Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others.</li> <li>e. Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, glasses, goggles, or face shield, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> </ol>
--

**Procedure (con't)**

- 2. 2) Conduct a pre-starting inspection of tools/equipment and work area**
  - a. Check the tools/equipment for damages
  - b. Inspect under roof deck for hazards such as electrical wire, sprinkler system pipes, flammables, traffic routes, etc.
  - c. Make sure the structural integrity of the deck is not compromised from cutting the opening. Verify with general contractor/building owner
- 3. Cut Opening in Deck/Membrane/Insulation**
  - a. Using a reciprocating saw, make sure the proper blade is used for the material being cut (ie; metal blade for metal deck)
  - b. Make sure that electrical cords do not fray on sharp edges
  - c. Make a pilot hole to make it easier to start with the saw. Use the drill with an appropriate bit for the material being drilled through. Plunge cutting is dangerous and is not a preferred method of starting a cut
  - d. Be sure you do not stand on the piece being cut
  - e. Cut the opening as per plan size
- 4. Secure New Opening**
  - a. a) Immediately cover and barricade the new opening as per job procedure Roof – Hole & Skylight Protection
- 5. Lower Debris to Ground**
  - a. Use the dump chute to lower pieces to ground level or if too large, use hoist
  - b. Make sure hoisting area is safe and cordoned off

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Preparing to Install</b> <ol style="list-style-type: none"> <li>a. Secure ground area under work areas and hoisting area</li> <li>b. Rope off or post signs that work is being performed overhead</li> <li>c. Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others</li> <li>d. Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, safety glasses, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> <li>2. <b>Conduct a pre-starting inspection of tools/equipment and work area</b> <ol style="list-style-type: none"> <li>a. Check the tools/equipment for damages and electrical cords for defects</li> <li>b. Inspect roof deck for hazards. Ensure a Roof Loading assessment Form “P-02-1”</li> </ol> </li> <li>3. <b>Raise fiberboard to Roof Area</b> <ol style="list-style-type: none"> <li>a. Use appropriate “Hoisting Job Procedures”</li> <li>b. Place sheets in a safe area ensuring they are secured so they don’t blow away in a strong wind gust</li> </ol> </li> <li>4. <b>Installing</b> <ol style="list-style-type: none"> <li>a. Ensure appropriate Fall Protection Plan is in place (Form F-02-2) and all appropriate PPE is inspected and in use as required for plan</li> <li>b. Place sheets in place on roof keeping a firm grip while handling</li> <li>c. Always carry sheets upwind on roof edge</li> </ol> </li> </ol>
--

**Procedure (con't)**

**4. Preparing to Install**

- d. When placing fiberboard on deck, use proper body mechanics to prevent injury
- e. In windy conditions, closely manage the sheets being laid out ahead of the fastening process. Don't lay too many sheets out ahead
- f. Cut sheets to size using insulation or utility knife. Make sure work gloves are worn to protect hands from cuts
- g. Verify with shop drawing on screw pattern. Position washers and screws and fasten using a screw gun. Use proper body mechanics to avoid back injuries
- h. Use screw gun to fasten. Ensure tool has been inspected prior to use, check electrical cords for defects
- i. Use only GFCI (ground fault circuit interrupters) cords or cordless screw guns in wet conditions
- j. Use a long screw gun whenever possible to eliminate/reduce amount of kneeling and bending
- k. Mop with hot tar (use appropriate job procedures for kettle use and mopping tar)
- l. When mopping hot tar, make sure PPE is worn to prevent burns. In addition, pant legs should be worn outside of and covering the top of boot to prevent tar from splashing into boot

**5. End of day**

- a. Clean up all cut pieces and lower to ground using hoist or dump chute (see appropriate job procedure) for proper disposal
- b. Clean up all loose screws and washers
- c. Make sure any sheets that have not been installed yet are securely fastened so as not to blow away
- d. Pick up all tools and extension cords to be lowered to ground and stored for future use
- e. Make sure that any equipment/tools needing repairs are tagged and given to supervisor

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

Do not overload deck, refer to Form P-02-1, “Roof Loading Assessment.”</li> </ol> </li> </ol>
--

**Procedure (con't)**

**4. Installing**

- a. Ensure appropriate Fall Protection Plan is in place (Form F-02-2) and all appropriate PPE is inspected and in use as required for plan
- b. Place sheets in place on roof keeping a firm grip while handling
- c. Always carry sheets upwind on roof edge
- d. When placing fiberboard on deck, use proper body mechanics to prevent injury
- e. In windy conditions, closely manage the sheets being laid out ahead of the ballast process. Don't lay too many sheets out ahead
- f. Cut sheets to size using insulation or utility knife. Make sure work gloves are worn to protect hands from cuts
- g. Lay out scrim sheet and cut to size. Use proper body mechanics to avoid back injuries
- h. Using crane or hoist and gravel bucket, hoist gravel to the roof. (Refer to appropriate job procedures for gravel bucket and hoisting/rigging)
- i. Using gravel bucket, motorized gravel spreader, shovels, rakes, and brooms spread gravel ensuring even distribution as per job specifications

**5. End of day**

- a. Clean up all cut pieces and lower to ground using hoist or dump chute (see appropriate job procedure) for proper disposal
- b. Clean up all loose items and materials
- c. Make sure any materials that have not been installed yet are securely fastened so as not to blow away
- d. Pick up all tools and extension cords to be lowered to ground and stored for future use
- e. Make sure that any equipment/tools needing repairs are tagged and given to supervisor

Clear the area.</li> <li>● DO NOT leave tools or materials unsecured on roof at end of day</li> </ul>
--	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Preparation</b> <ol style="list-style-type: none"> <li>a. Secure ground area under work areas and kettle area</li> <li>b. Rope off or post signs that work is being performed overhead</li> <li>c. Keep the work area clean. Remove obstacles that could cause personal injury</li> <li>d. Wear the proper clothing such as, long sleeve shirts, buttoned at cuffs, safety glasses, hard hat, properly fitted pants without cuffs. Tie long hair back</li> </ol> </li> <li>2. <b>Conduct a pre-starting inspection of tools/equipment and work area</b> <ol style="list-style-type: none"> <li>a. Check the tools/equipment for damages or defects</li> <li>b. Inspect roof deck for hazards. Ensure a Roof Loading assessment Form “P-02-1” is done</li> <li>c. Fill out appropriate daily pre-use inspection forms as required for equipment being used</li> </ol> </li> <li>3. <b>Raise materials to Roof Area</b> <ol style="list-style-type: none"> <li>a. Refer to job procedures for Kettle use and setting up the supply line and transfer of hot stuff</li> <li>b. Once the hot asphalt gets to the roof, transfer it from the hot lugger to the mop cart</li> <li>c. Only fill mop cart to 75% capacity to prevent spills while transporting to work area</li> <li>d. Make sure you wear burn proof gloves and pant legs should be down over boots to prevent splashing on legs</li> </ol> </li> </ol>	
---	---

**Procedure (con't)**

**4. Move mop cart to work area**

- a. Haul mop cart to the area where you are working
- b. Ensure a clear pathway. Move objects and people as necessary
- c. Whenever moving hot asphalt, yell “HOT” to alert everyone around to be on guard
- d. Never drag or “ride” the mop cart over objects on the deck

**5. Use mop to spread hot asphalt**

- a. Ensure all openings are sealed or covered before beginning to mop to prevent dripping hot asphalt below
- b. To mop, step to one side of the mop to allow hot asphalt to be dispensed
- c. Walk forward pulling the mop behind you
- d. Other workers should be clear of the mopping area and should not be kneeling or working close enough to be splashed

**6. End of day / clean up**

- a. Clean up all tools/equipment and lower to ground using hoist or dump chute (see appropriate job procedure) for proper disposal
- b. Clean up all loose items and materials
- c. Make sure any materials that have not been installed yet are securely fastened so as not to blow away
- d. Pick up all tools and extension cords to be lowered to ground and stored for future use
- e. Make sure that any equipment/tools needing repairs are tagged and given to supervisor

No one is to work directly under the dump chute. Make sure it is barricaded with pylons or caution tape</li> <li>d. Set up dump chute and/or hoist using appropriate job procedures</li> </ol> </li> </ol>
--

**Procedure (con't)**

**4. Raise equipment to roof**

- a. Using a crane or hoist, bring materials and equipment to roof area. Refer to “Hoisting Job Procedures”

**5. Removal of existing roof system**

- a. Using site specific equipment, remove only as much roofing in one day as can be safely replaced and recovered
- b. Use proper body mechanisms when bending / lifting to prevent injuries
- c. After removing a portion, place in wheelbarrow and bring to dump chute. Load pieces into chute by hand to avoid jams (Refer to “Dump Chute” job procedures)

**6. End of day / clean up**

- a. Clean up all tools/equipment and lower to ground using hoist or dump chute (see appropriate job procedure) for proper disposal
- b. Clean up all loose items, materials and debris
- c. Make sure any materials that have not been installed yet are securely fastened so as not to blow away
- d. Pick up all tools and extension cords to be lowered to ground and stored for future use
- e. Make sure that any equipment/tools needing repairs are tagged and given to supervisor

Fill out appropriate daily pre-use inspection forms as required for equipment being used</li> </ol> </li> </ol>
--

**Procedure (con't)**

**3. Raise Materials to Roof Area**

- a. Using a crane or hoist, bring materials to roof area. Refer to “Hoisting Job Procedures”
- b. Place sheets in a safe area ensuring they are secured so they don’t blow away in a strong wind gust
- c. DO NOT overload the roof deck. Refer to Form P-02-1, “Roof Loading Assessment”

**4. Apply Primer**

- a. Always refer to particular product manufacturer’s instructions for specific and detailed instructions for the product being used
- b. Using a paint tray, brushes or paint rollers, apply product to required area
- c. Prime only a large enough area that is manageable to work with
- d. Most primers will need to be thoroughly dry before applying waterproofing membrane. (Check manufacturer’s instructions)
- e. Do not accelerate drying by heating with a torch
- f. Store primer in a well-ventilated area
- g. Make sure the container is firmly closed when not in use
- h. Tools can be cleaned with petroleum solvents such as mineral spirits, varsol, xylene, etc

**5. Install the Membrane**

- a. Roll out approximately 3 m (10 ft) of membrane and peel back the first 1 m (3 ft) of film
- b. Adhere the exposed part to the substrate (previously primed) and unroll the remaining membrane as far as possible
- c. Once the membrane is in place, peel off the film diagonally while holding the membrane tight
- d. Make sure appropriate overlap is considered as per manufacturer’s instructions
- e. Continue in this manner until area is covered

**6. Clean up**

- a. Pick up and dispose of any cut pieces and debris in the appropriate manner.

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

Do not overload deck, refer to Form P-02-2, “Roof Loading Assessment”</li> </ol> </li> <li>3. <b>Create cover for holes/skylights</b> <ol style="list-style-type: none"> <li>a. Use suitable materials such as 2 x 4 or plywood with enough strength that it won’t break if loads are imposed on it</li> <li>b. Use hand and/or power tools to fabricate a cover for any roof openings.</li> <li>c. Use proper type tools for the specific job being done.</li> <li>d. Use of improper tools can result in personal injury or damage to materials or property.</li> </ol> </li> </ol>
---

**Procedure (cont’)**

**4. Fasten cover to deck**

- a. Place the cover over the hole and secure the cover to the deck using appropriate type screws for the deck type
- b. Cover must be fastened in such a way so that it cannot be easily removed, to prevent displacement by wind, equipment, or employees. This will prevent accidental removal and prevent a possible injury resulting from a fall

**5. Mark cover**

- a. Use a can of bright coloured spray paint and mark the word “HOLE” on the cover in large letters
- b. Do not use the hole cover as an area to store materials. This will put undue stress on the cover and would potentially cover the Blaze Orange label

<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Torch</li> <li>● Metal Striker</li> </ul>	<ul style="list-style-type: none"> <li>● Hoses</li> <li>● Propane Tank/Vertical Cart Stand</li> </ul>	<ul style="list-style-type: none"> <li>● Fire Extinguisher</li> <li>● Hot Work Permit</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO inspect torches and other equipment before use</li> <li>● DO ensure other workers stay at least 2 or 3 meters away from the flame</li> <li>● DO ensure all appropriate PPE is used</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT use leaking propane equipment</li> <li>● DO NOT torch directly at flashings, corners, voids in the roof deck, wood or insulation</li> <li>● DO NOT torch near gas and electrical lines</li> </ul>
--	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection of tools/equipment and work area</b> <ol style="list-style-type: none"> <li>a. Make sure work area is free of debris, clutter and there are no flammables present</li> <li>b. Ensure there is a fully charged fire extinguisher readily available</li> <li>c. Inspect propane tanks and all components of your torch system for any signs of wear or damage</li> <li>d. If damage is noticed or suspected, prevent item from further use and notify the immediate supervisor</li> <li>e. Make sure you have the right type of propane tank for the torch in use (either liquid or vapor)</li> <li>f. Make sure there is one (1) fire extinguisher available nearby for each torch being used</li> </ol> </li> <li>2. <b>Place propane tank in a secure upright position</b> <ol style="list-style-type: none"> <li>a. Store propane bottles clear of open flame – at least 6 meters (20 feet) from torch – and secure in an upright position. Make sure hose length is adequate for this distance</li> </ol> </li> <li>3. <b>Connect the torch hose to the propane tank</b> <ol style="list-style-type: none"> <li>a. Make sure that the regulator on the torch is fully closed.</li> <li>b. Use an appropriate wrench to securely tighten the fittings; pliers or vice grips should not be used as they can slip and damage the brass fittings on your torch system making future installation or removal difficult</li> </ol> </li> <li>4. <b>Open the valve on the propane tank</b> <ol style="list-style-type: none"> <li>a. Do not regulate the flow of propane from the valve on the tank; this valve must be fully opened</li> <li>b. Once the tank valve is opened and the lines are charged with propane, the entire system should be inspected for leaks</li> <li>c. If a leak is noticed, close the valve on the propane tank; either repair or replace the leaking component</li> </ol> </li> </ol>
--

**Procedure (con't)**

**5. Ignite the propane torch**

- a. Make sure that the torch is aimed in a safe direction
- b. Have a striker on hand
- c. Slowly open the regulator on the torch
- d. As soon as propane starts to flow from the torch, ignite it with a striker (do not use matches or a lighter)
- e. Use the regulator to adjust the flame to the desired intensity
- f. Should striker fail to light the torch on the first attempt, close the valve and wait for escaped gas to dissipate before attempting to relight the torch

**6. Extinguish torch after use**

- a. Do not leave a lit torch unattended
- b. Make sure torch stands are used when torch is not in use
- c. A torch that will be temporarily out of use can be extinguished by closing the regulator on the torch
- d. A torch that will be out of use for longer periods of time should be extinguished by closing the valve on the propane tank; this will use up any propane that is left in the torch hose
- e. A torch that will no longer be used should be disconnected from the propane tank; the hose should be coiled up and returned to its proper storage location to reduce trip hazards

**7. Conduct a fire watch**

- a. Fire watch must be present and remain on site a minimum of two (2) hours upon completion of hot work
- b. Fire watch person must be trained to watch for hot spots and periodically check heat sensors
- c. Fire watch results must be recorded in “Fire Watch Record Book”

**8. Conduct a post operation inspection**

- a. Inspect all components of the torch system after use
- b. If there is any suspected damage, the item should be repaired or replaced; notify the immediate supervisor
- c. Maintain good housekeeping and clean up your work area

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Roofing kettles are designed and manufactured for heating of roofing asphalt and coal tar pitch of the types and grades which can be melted by directly applied heat. The tar supply line transfers the hot tar through a pipe to the roof level. Misuse of this equipment could result in damage or injury

<b>Hazards Present</b>		
● Burns	● Fires	● Tar Spills
<b>Protective Mechanisms</b>

Dismantle first and heat on the ground</li> </ul>
--	--

**Note:** Operators of equipment must be trained, demonstrate operational competency and/or have received approval from their immediate supervisor. Operators must be wearing the proper PPE as required and be familiar with the location of the nearest exit, first aid station and fire extinguisher.

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Conduct a pre-starting inspection of equipment and work area</b> <ol style="list-style-type: none"> <li>a. Make sure work area on ground is free of debris, clutter and flammables</li> <li>b. Make sure area on roof is free of debris and clutter; fall protection must be in place (guardrails) or personnel on roof must be using a harness and lifeline</li> <li>c. Ensure that all equipment being used to erect the tar supply pipe has been inspected and is in good working condition; if using hoists, make sure they have been set up following safe job procedures</li> <li>d. Make sure the tar pipes, couplers and unions are in good condition and the pipes are not plugged</li> </ol> </li> </ol>
---

**Procedure (con't)**

- 2. Determine the length of pipe required to supply tar to the roof level**
  - a. Use a tape measure or a length of rope; do not use a lifeline for this purpose
  - b. Measure from the kettle output to the required height on the roof; make sure kettle has been set up using safe job procedure
- 3. Assemble the required length of rope**
  - a. Choose an area on the ground that is flat and level so that pipes will assemble without cross threading
  - b. Use a tiger torch to heat couplings and unions so that pipes will thread sufficiently; observe safe work procedure for operating a propane torch
  - c. Make sure that the pipes are chained or wired at the couplings
  - d. Keep the pipe line to the roof as short and vertical as possible and run a rope from the valve to the roof
- 4. Raise the pipe into position**
  - a. Depending on the length of pipe, a rope, hand hoist or power hoist may be used to lift the pipe
  - b. Have personnel on the ground to guide the pipe while it is being raised, to keep it away from the wall of the building
  - c. When pipe is at sufficient height, guide the bottom end onto the union at the kettle output, **MUST** wear gloves
  - d. Tighten the union sufficiently with a pipe wrench to avoid leaks (use heat from the tiger torch as necessary)
  - e. Pipe lines over 50 feet should always be supported
- 5. Secure pipe at roof level**
  - a. Depending on the building or parapet detail, the foreman of the crew will choose an appropriate method to secure the pipe in place (wire, clamps etc.)
  - b. Ensure there are guardrails present at 1.22 m (4 ft) on either side of the pipe

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

Make certain the tow hitch and safety chains are properly attached</li> <li>● DO NOT operate the pump unless the flues are fully covered with material hot enough to flow freely and the roof line is erected and fastened securely into place</li> </ul>
---	---

**Note:** Operators of equipment must be trained, demonstrate operational competency and/or have received approval from their immediate supervisor. Operators must be wearing the proper PPE as required and be familiar with the location of the nearest exit, first aid station and fire extinguisher

**Procedure**

- 1. Conduct a pre-starting inspection of equipment and work area**
  - a. Make sure that kettle and all related equipment (torches, propane tanks, fire extinguishers etc.) have been inspected and are in good working condition before they leave the yard
  - b. Check with supervisor as to location of kettle set-up
  - c. Make sure set-up area is free of debris, clutter and flammables
- 2. Park the kettle**
  - a. Choose a firm level area as far away as is practical from the building and it's fresh air intakes
  - b. Provide plywood or other adequate ground coverage to protect property from tar stains
  - c. Make sure the legs of the kettle are down to prevent tipping and the wheels are blocked to prevent rolling
  - d. If set up area is close to entrances or public access, provide barriers, signs, fencing etc. as per supervisors instructions
  - e. Stack kegs neatly so they are in a convenient location for the kettle operator
- 3. Open lid and inspect contents of kettle**
  - a. Make sure lid of kettle is secure in open position (block open if necessary)
  - b. Check inside of kettle for moisture or debris and remove if found
  - c. If the level of tar in the kettle is below the heating flues, add tar to the kettle; do not light an empty kettle. Asphalt level should be kept at least 2" above the level of the tubes at all times
- 4. Connect propane tank**
  - a. Unlock gas bottles.
  - b. Ensure there is no smoking in propane storage area
  - c. Store propane bottles clear of open flame – at least 6 meters (20 feet) from kettle – and secure in an upright position
  - d. Thread base coupler onto tank. Do not over tighten
  - e. Check valve & hoses for leaks
- 5. Lighting the burners**
  - a. Open the exhaust stack covers
  - b. Place the burners on the ground, pointing away from the kettle or any combustible material. Remember that the propane flame is difficult to see on a bright day
  - c. Make certain that the Globe Valve (at burner) is closed and adjust the LPG Regulator to 25 psig. Open the valve on the propane tank only slightly
  - d. Use a striker (no matches or lighters) to ignite the generating coil while opening the globe valve. The globe valves provided with the ASE kettle are designed to be used in either the fully open or fully closed position. They should not be used in a partially open position to regulate gas flow
  - e. Open the valve on the propane tank fully
  - f. Readjust the regulator pressure to 25 psig and using welding gloves, insert the burner into the burner well
- 6. Bring tar up to required temperature**
  - a. Burners should not be fired at full thrust until at least 150 mm (6 inches) of melt covers the heating tubes
  - b. When heating cold material, the temperature of the melt should be slowly raised to the desired level
  - c. Monitor temperature of the tar with a thermometer. Working temperature of asphalt will range from 190°C to 218°C (375°F to 425°F)
  - d. Asphalt should not be heated over 260°C to 274°C (500°F to 525°F) for more than four hours and must never be heated above 274°C (525°F) EXCEEDING 500°F could result in flash fires in the kettle

**Procedure (con't)**

**7. Start pump motor (See JP #15 - Set up of Tar Supply Line)**

- a. Wear long sleeve shirt and gloves, do not wear loose clothing or other materials that could become entangled in moving parts
- b. Remove any obstacles
- c. Pull cord to start motor

**8. Adding tar**

- a. Place block of tar on its side and use utility knife to cut and remove the entire paper/plastic wrap. Remove all separated debris to the containment area or dumpster
- b. Using an axe (visually inspect for defects prior to use), cut the block into smaller pieces, smaller pieces melt quicker
- c. Add tar as required by slowly lowering product into vat. Open door on kettle and set piece of asphalt on the lip of the kettle. Slide asphalt piece into the kettle slowly to avoid a splash. Do not throw in. Do not overfill. Level of tar should be no more than 4 to 6 inches from the top of the kettle

**9. Shut down – End of Day**

- a. Shut off the valve at the propane bottle.
- b. Allow the gas in the hose to burn off then shut off the burner valve.
- c. Use a wrench to remove the coupler from the propane bottle.
- d. Secure all propane bottles in an upright position and as per SWP #4, JP #22, #23 and Provincial Regulations.
  - NB OHSA & Reg 91-191 (Jul 1, 2011) Part VIII, Section 74 to 79
  - NS OHSA & Reg S.N.S. 1996, c.7 (Jun 12, 2013) Part 5, Section 45 to 49
  - PE OHSA General Reg EC180/87; 43/06 (Jan 2013) Part 37, Section 37.17 to 37.23
  - NL OHSA Reg 5/12 (Jan 2012) Part XXI, Section 448, 450, 453
- e. Close exhaust stack covers and lock up the engine cover, burner well cover, lids and drain cock to help prevent theft or vandalism

**10. Shut down – End of Job**

- a. Towards the completion of the roofing job, the foreman must advise the kettle operator to allow the level of tar in the kettle to go down to allow safe movement of the kettle after the job
- b. Make sure the drain cock and lid are locked if the kettle will be remaining at the jobsite overnight

**11. Conduct a post operation inspection**

- a. If any wear, damage or malfunction is noticed, notify supervisor so the problem can be corrected before the kettle is used again
- b. Maintain good housekeeping. Once the kettle is pulled out from the site, pick up all debris and ground cover material; rake the area if necessary

**12. Towing**

- a. Do not tow kettle when contents are above the “Towing Level” mark shown on the outside of the tank. To do so may cause splashing and place undue stress on the tires and running gear
- b. Check the manufacturer’s instructions for the maximum towing speed. (Some kettle models do vary, usually between 60Km/h and 80Km/h). Make certain that the tow hitch and safety chains are properly attached
- c. Connect brakes and lights before traveling with the kettle

**Procedure (con't)**

**13. Initial Response to a Hot Tar Injury and First Aid**

- a. Prepare for emergencies. Train personnel in first aid. Keep a source of cool water available to immerse a burn injury. Have a plan to help an injured worker off the roof
- b. Make sure the injury scene is safe before rescuing or administering first aid to an injured worker (e.g., ensure that the injured worker can be accessed without walking on slick tar)
- c. Do not unnecessarily move an injured person, further injury may result. If the person is unconscious, check for an open airway and pulse. If needed, begin rescue breathing or CPR
- d. If the injured worker has tar in his/her eyes, flush with cool, clean, low-pressure water or saline. All eye injuries should be evaluated by a physician as soon as possible
- e. If tar is on skin, cool the tar immediately with large amounts of water to prevent the burn from going deeper
- f. Do not use gasoline to remove tar, this may cause a chemical burn, be absorbed systemically and cause organ damage! Removing the tar is not a medical emergency. Tar should only be removed by a medical professional.

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

The information contained in this publication is intended for general use and may not apply to every circumstance. It is not a definitive guide to government legislation and does not relieve persons using this publication from their responsibilities under the Workplace Safety and Health Act or applicable legislation. **General**

The dangers associated with kettles are very real. These vessels contain materials, such as hot asphalt or coal tar, that need to be handled with extreme care. It is important to always follow safety requirements. **Always wear the proper PPE.**

Hazards Present		
● Burns	● Fires	● Tar Spills

--	---

**Note:** Operators of equipment must be trained, demonstrate operational competency and/or have received approval from their immediate supervisor. Operators must be wearing the proper PPE as required and be familiar with the location of the nearest exit, first aid station and fire extinguisher.

**Procedure**

1. **Conduct a pre-starting inspection of equipment and work area**
  - a. Make sure work area on roof is free of debris, clutter and flammables
  - b. Fall protection must be in place (guardrails) or personnel on roof must be using a harness and lifeline
  - c. Ensure that the lugger and other equipment has been inspected and is in good working condition. Be sure to inspect vent on lugger before use
  - d. Make sure the tar pipes, couplers and unions are in good condition and the pipes are not plugged

**Procedure (con't)**

**2. Secure pipe at roof level**

- a. Depending on the building or parapet detail, the foreman of the crew will choose an appropriate method to secure the pipe in place (wire, clamps etc.)
- b. Guardrails should be erected at least 1.22 m (4 ft) on either side of the pipeline
- c. Insulating the pipes, especially during cold weather or where the pipe is extended a substantial distance, helps to maintain proper bitumen temperature and control excess fumes
- d. The end of the pipe should be connected to a 90 degree elbow pipe and a flexible discharge hose

**3. Prepare to release tar into lugger on roof**

- a. Always make sure there is no water or moisture in the lugger. Keep the filler neck covered when not in use
- b. Never fill a lugger or mop bucket more than three-quarters full. Anything over this limit is easy to splash or spill
- c. Always chock the wheel or set the brakes while filling the lugger
- d. Always check the path of travel and make sure it is level and clear of debris before moving the lugger
- e. Be sure the lugger's wheels are free of debris and can turn easily to minimize the possibility of it overturning
- f. Make sure the tap on the lugger is closed fully before filling
- g. Operators must wear appropriate PPE
- h. Fire extinguisher must be in close proximity at all times

**4. Release of asphalt to lugger**

- a. Put lugger under supply so the pipe is inside the lugger
- b. Always PULL lugger, do not push
- c. Stay 6 to 8 feet away from the lugger while it is being filled
- d. Kettle Operator to pull supply line to fill, to prevent overflow on roof
- e. When full, lugger will smoke from the vent. Other option is to tie the filling process

**5. Transfer of asphalt from lugger to mop cart**

- a. With gloves on, pull hot lugger to mop cart area
- b. Always PULL hot lugger, do not push
- c. Line up the mop cart under the lugger tap
- d. Open tap on lugger to release tar. Tap may have to be heated before opening
- e. Close tap when mop cart is full
- f. When lugger is empty, make sure tap is closed before filling and pull pin out to make sure it sits upright

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Protecting employees and general public from injuries and dangers associated with the erection and use of metal scaffolds.

Hazards Present		
<ul style="list-style-type: none"> <li>● Ergonomic (force &amp; posture)</li> <li>● Fall from Height</li> </ul>	<ul style="list-style-type: none"> <li>● Pinch Points</li> <li>● Falling Objects</li> </ul>	<ul style="list-style-type: none"> <li>● Pulled Muscles</li> <li>● Electrocutation</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Manufacturers Recommendations</li> <li>● Proper Lifting Techniques</li> </ul>	<ul style="list-style-type: none"> <li>● ERP (Emergency Response Plan)</li> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● Safe Work Practices/Procedures</li> <li>● Training</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO read and follow manufacturer instructions</li> <li>● DO wear appropriate PPE</li> <li>● DO make sure scaffold is erected, altered and dismantled by or under supervision of qualified workers</li> <li>● DO inspect daily before use</li> <li>● DO make sure scaffold can withstand 4 times the maximum load likely to be imposed on it</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT jump on planks or work platforms</li> <li>● DO NOT work outdoors in a storm or high winds</li> <li>● DO NOT climb or stand on cross braces or guardrails</li> <li>● DO NOT use ladders or makeshift devices on top of scaffolds to increase height</li> <li>● DO NOT permit persons to stand directly below a scaffold</li> <li>● DO NOT mix parts from different manufacturers</li> </ul>
---	---

<p><b>Procedure</b></p> <p><b>1. Scaffold selection and inspection</b></p> <ol style="list-style-type: none"> <li>a. Wear appropriate personal protective equipment</li> <li>b. Select the appropriate scaffold system for the job. Consider the height required, type and duration of work, range of weather conditions, weight of workers, materials and equipment, the location and requirements for pedestrian traffic</li> <li>c. Inspect all of the scaffolding components to ensure they are in good condition and suitable for the job. Do not use any damaged or defective scaffold component; take it out-of-service, attach a warning tag and advise your supervisor</li> <li>d. Ensure the sills are not split or rotten and are a suitable size and strength to support the loads without settlement or deformation</li> <li>e. Ensure the adjustable bases have no thread damage and the base plates are not curled or warped</li> <li>f. Ensure the jackscrews have no cracks in the weld where they attach to the top of the caster, no thread damage and the adjusting nut is tight</li> <li>g. Ensure the end frames have no cracks in the welded joints, the top and bottom cross-members have no kinks or dents, legs are plumb and square, brace locks are in good working condition and coupling pins are in place and secured to the frame</li> <li>h. Ensure the cross-braces are straight with no bent ends, the pivot connection is in good working order and there is no excessive rust</li> <li>i. Ensure the platform decks are not cracked, locks are working, all bolts and screws are in place and there are no burns or broken ends</li> <li>j. Ensure the planks have no split ends, saw cuts, notches, protruding nails or excessive warping and no contamination (such as oil, chemicals or burns) that could affect the integrity of the planks</li> </ol>
---

**Procedure (con't)**

**1. Scaffold selection and inspection**

- k. Ensure the guardrails are straight with no kinks, dents or excessive rust
- l. Ensure the casters are the same size and from the same manufacturer, wheels rotate and swivel well, brake mechanism works properly, wheel treads have no damage, wheel diameter is not less than 13 cm and one set of wheels is the swivel type
- m. A damaged scaffold component shall not be used until it has been effectively repaired

**2. Work site inspection and conditions**

- a. Scaffolds should be erected by two or more workers
- b. Check the location for ground conditions, overhead electrical wires, other hazards, obstructions, changes in elevation and tie-in problems
- c. A metal scaffold located in proximity to a high voltage energized electrical conductor or equipment must be effectively grounded where a hazardous level of electrical charge is likely to be induced in the scaffold
- d. Clear the work area of debris and other objects
- e. Set up barricades and warning signs wherever necessary

**3. Set up**

- a. The base for the scaffold must be firm and level enough to support the load of the scaffold, workers and materials. Sills and base plates are required on any soil or unstable ground condition or where any leveling adjustment is needed. The lower ends of the scaffold frames must be supported by firm and adequately sized foundations or sills. Ensure the scaffold feet are centrally located on the sills
- b. Ensure the casters and wheels of a rolling scaffold are effectively locked
- c. Connect the first cross-brace to the frame. Allow the frame to lean slightly forward and rest the brace on the ground
- d. Secure the first cross-brace to the second frame
- e. Install the second cross-brace to both frames. Level and plumb the scaffold. Start at the highest point of the scaffold and use the jack-nut to lower this corner. Adjust the other three corners so the frames are level with each other. Do not exceed the adjustment limits specified by the manufacturer. Ensure the castor height adjusting screws do not extend more than two-thirds of the total length or 30 cm (11 ¾”), whichever is the lesser. Fasten the base plate to the sills
- f. Install and secure the decking units
- g. Assemble additional tiers/levels in the same manner. A worker at ground level should pass the necessary scaffold components to the worker on the work platform. A rope should be used to raise components above the second tier. End frames must be installed so the integral built-in ladder rungs are consistently positioned. Ensure the stacked frames are properly seated on the couplers
- h. Complete the platform fully at each level before assembling the next level. Do not move the platform decks until the new end frames have been set in place and cross braces are installed
- i. If the height of the scaffold exceeds 3 times its minimum base then it must be effectively guyed or secured to a building or structure as per the OH&S Regulations
- j. If the height of a free-standing tower or rolling scaffold exceeds 3 times its minimum base dimension then outriggers must be installed on both sides of the scaffold structure. If the scaffold is adjacent to a structure then it must be braced against the structure and outriggers used on the opposite side
- k. Install guardrails on all open sides and ends of a platform that is 1.22 m (4 ft) or more above grade or floor level. The top rail must be placed 0.9 m to 1.1 m (36 to 40 in.) above the work surface. An intermediate rail must be placed halfway between the top rail and the working surface. Guardrails are not required on the side adjacent to the structure if the open space between the work platform and structure is 30 cm or less

**Procedure (con't)**

**3. Set up (con't)**

- 1. Install toeboards on all open sides of the work platform if it is possible for tools or materials to roll off. The top of the toeboard must be at least 10 cm (4 in.) above the platform. If loose materials are to be stacked above the height of the toeboard then it must be increased in height or mesh panels must be installed

**4. Usage**

- a. Inspect the scaffold daily before use and after a modification
- b. If your work boots are muddy then clean the soles. Avoid climbing with wet soles. Ensure your footwear is in good condition
- c. Face the ladder when climbing up or down
- d. Maintain a firm grip. Use both hands when climbing
- e. Maintain three point contact by keeping two hands and one foot, or two feet and one hand on the ladder at all times

**5. Dismantling and maintenance**

- a. Ensure the structure will remain stable at all times
- b. Clear the platform of all materials and debris before dismantling
- c. Proceed in the reverse order of erection
- d. Dismantle each tier completely before starting on the one below
- e. Work from the full platform decks while removing braces and frames
- f. Remove any jammed or rusted components with caution. Tugging or pulling on stuck parts can cause a loss of balance
- g. Check and maintain all scaffold parts. Repair or discard any damaged pieces immediately
- h. Lubricate moving parts of all fittings

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

The purpose of this procedure is to provide a code of practice for all employees who find themselves working alone or after hours. The procedure applies to all employees who work alone / after hours.

Hazards Present		
• Minor Injury	• Severe Injury	• Death
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training
Equipment / Tools Required		
• Full Body Harness	• Energy Absorbing Lanyard/Self-Retracting Lanyard	• Guardrails
• Anchor Point that can withstand 5000 lbs	• Rope Grab / Lifeline	• Safety Monitor

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO use the “buddy” system where possible</li> <li>• DO perform a visual check of the parking lot to ensure that it is safe before exiting your vehicle</li> <li>• DO report all situations, incidents or "near misses" where working alone increased the severity of the situation</li> <li>• DO ensure that all doors are locked upon leaving the vehicle to enter the building</li> <li>• DO enter the building through the main door and complete the required security process of the building</li> <li>• DO ensure you have a way of communication with your supervisor at all times</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT schedule high risk tasks after normal business hours</li> <li>• DO NOT park your vehicle out of sight, park vehicle in a common area (example: front of building)</li> <li>• DO NOT travel without emergency supplies in the vehicle (food, clothing, 1st aid kit)</li> <li>• DO NOT enter enclosed areas</li> <li>• DO NOT work alone without appropriate training for the conditions and task</li> <li>• DO NOT work alone or remotely without a form of communication</li> </ul>
--	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li><b>Explanation</b> <ol style="list-style-type: none"> <li>The purpose of this Code of Practice (COP) is to ensure that all Atlantic Roofer Limited employees, contractors and subcontractors engaged in working alone are working safely whether performing hazardous work, travelling or at risk of violence</li> </ol> </li> <li><b>Definition</b> <ol style="list-style-type: none"> <li>Individuals are alone at work when on their own; they cannot be seen or heard by another worker; cannot expect a visit from another worker or member of the public for some time; and/or where assistance is not readily available when needed</li> </ol> </li> <li><b>Identified Hazardous Situations</b> <ol style="list-style-type: none"> <li>Workers who travel away from base office to meet clients</li> <li>Workers who do hazardous work but have no routine interaction with customers or the public</li> <li>Workers who travel alone but have no routine interaction with customers or the public. This includes business people in transit</li> <li>Workers who are at risk of violent attack because their workplace is isolated from public view.</li> </ol> </li> </ol>
--

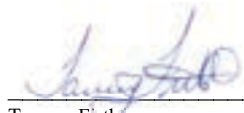

**Procedure (con't)**

**4. Workers performing hazardous work**

- a. Assess the hazards of the workplace
- b. Investigate incidents at the workplace, and those from similar workplaces
- c. Avoid working alone whenever possible, especially for jobs with a recognized risk
- d. Ensure you have the appropriate training and equipment for the situation and task
- e. Report all situations, incidents or “near misses” where working alone increased the severity of the situation
- f. Call a co-worker when you arrive and just before you leave the work area
- g. Make sure you check in with the co-worker at predetermined times. Tell your co-worker the nature of the work you will be performing and when you expect to be finished
- h. Have the name, address and telephone number of where you are working
- i. Make sure you have a company provided phone if on a job site or other means of reliable communication
- j. Ensure all safe work practices and procedures are available and on hand
- k. Always have appropriate first aid kit and emergency supplies on hand at a work site
- l. Ensure you are familiar with emergency procedures

**5. Workers travelling alone**

- a. Workers must have full concentration on the road when traveling alone
- b. Allow sufficient rest time for workers who are traveling on long trips
- c. Well-maintained vehicles prevent exposure of workers to unnecessary risk
- d. Appropriate first aid and emergency supplies should be provided
- e. Let a co-worker know your approximate travel plan. Call in if you expect to be late

**General**

This Job Procedure describes the use of a control zone as an acceptable means of fall prevention.

Hazards Present		
• Minor Injury	• Serious Injury	• Death
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training/Supervision
Equipment / Tools Required		
• 8’ North Shore Roofing Rails	• High Visibility Vests	• Warning Signs

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>• DO inspect all equipment before each use</li> <li>• Do remove from service if defects are found</li> <li>• DO read and understand manufacturer’s instructions</li> <li>• DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>• DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT alter or intentionally misuse equipment</li> <li>• DO NOT install or use if you have not been trained in its correct application and use</li> <li>• DO NOT throw or drop any equipment from building or heights</li> <li>• DO NOT use any equipment or tools if defects are found</li> </ul>
---	---

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Directions</b> <ol style="list-style-type: none"> <li>a. <b>A control zone may be used as the means of fall protection under OHS Reg.’s, section 29 where work is being done at a distance greater than 2 metres from the edge of a roof</b></li> <li>b. Where work is being done from the edge of a roof or within 2 metres of the edge of a roof that has a slope of less than 3/12, an appropriate means of fall protection must be used (eg: travel restraint or fall arrest)</li> <li>c. Use of a control zone is not permitted on a working surface where the slope of the surface exceeds 3 vertical inches in 12 horizontal inches or for scaffolds</li> <li>d. A control zone cannot be used if the level working surface on which work is being performed is <b>less than 4 metres wide</b></li> </ol> </li> <li>2. <b>Definitions</b> (See Figure 1)             <ol style="list-style-type: none"> <li>a. <b>Control Zone</b> means the area between an unguarded edge of a building or structure and a line which is set back a safe distance of at least two metres (6.5 feet)</li> <li>b. <b>Raised Warning Line</b> is a warning method that provides a visual and physical reminder of the presence of a hazard (eg: Fall hazard)</li> </ol> </li> </ol>
--

**Procedure**

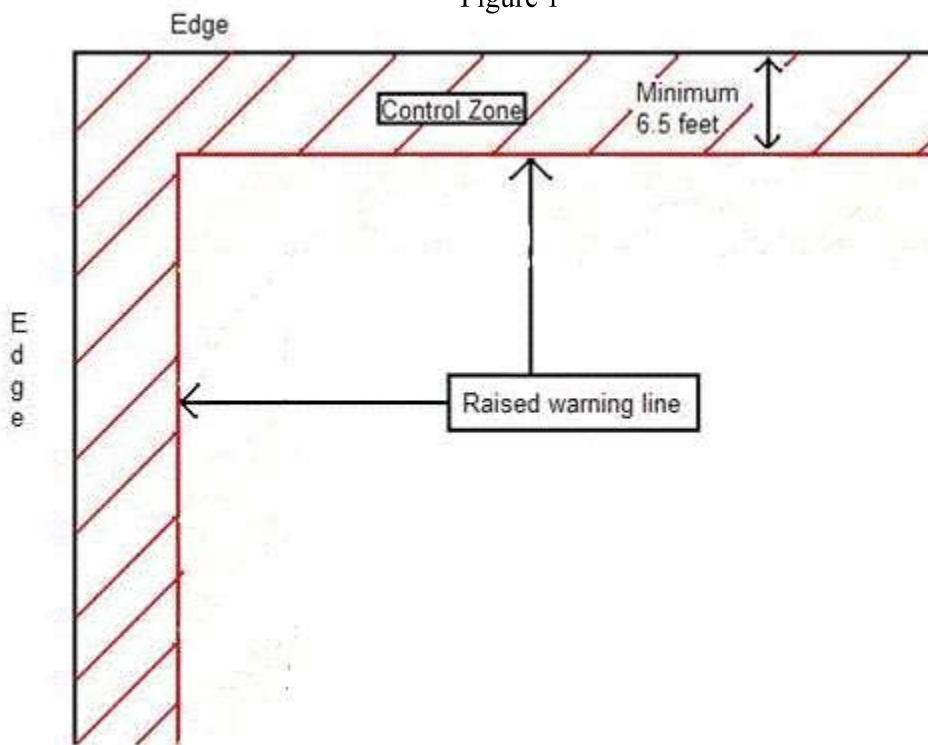

**3. Width of the Control Zone**

- a. Must be at least two metres (6.5 feet), with additional distance if any of the following conditions exists:
  - i. The working surface is slippery or sloped
  - ii. The work is carried out at an elevation relative to the unguarded edge
  - iii. The risk is increased by the use of equipment near the control zone
- b. Only workers directly required for the work at hand should be inside the control zone with the use of an appropriate means of fall protection as per 1b

**4. Raised Warning Line (See Figure 1)**

- a. A raised warning line must be put in place prior to work starting
- b. A line defining the control zone is to be established and in use at all times during such work
- c. An acceptable raised warning line is the use of North Shore Roofing rails consisting of:
  - i. 1” x 1” x 3/16” HSS square rails at 8 feet long
  - ii. All potential work areas require a defined working “zone”
  - iii. No less than 3 rails linked together linearly with a 90 degree termination rails at both ends of run
  - iv. Both 90 degree termination rails must be inwards (eg: toward the work area or away from the roof edge)

Figure 1

---	---

<p><b>Procedure</b></p> <p><b>1. Directions</b>          When a worker falls and is suspended in a harness, it’s important to rescue him or her as quickly as possible because of the following reasons:</p> <ol style="list-style-type: none"> <li>a. The worker may have suffered injuries during the fall and may need medical attention</li> <li>b. When workers are suspended in their safety harnesses for long periods, they may suffer from blood pooling in the lower body. This can lead to suspension trauma</li> <li>c. Suspended workers may panic if they are not rescued quickly</li> <li>d. The event that led to the fall may create additional risks that need to be addressed</li> </ol> <p><b>2. Emergency Response Plan</b>  <b>Note:</b> It’s important to know your role.</p> <ol style="list-style-type: none"> <li>a. The foreman (or alternate foreperson) takes control of the situation.</li> <li>b. The foreman alerts all workers in the immediate vicinity by yelling out – EMERGENCY. STOP WORK. All workers in the immediate vicinity of the incident stop working. The foreman quickly evaluates the situation and identifies any further hazards that could arise</li> <li>c. The foreman or their designate goes to get help if workers are close by. If no one is close enough, the foreman calls for help</li> <li>d. The foreman calls 911 to notify local police, fire, and ambulance if required</li> <li>e. If pre-arranged with the operator, the crane operator remains on standby. The operator frees the hook and waits for further direction in case the designated rescue team must perform a basket rescue</li> <li>f. The foreman (or a worker assigned to the task) isolates the accident zone and its perimeter to limit further exposure</li> </ol>
--

**Procedure (con't)**

**2. Emergency Response Plan**

- g. The foreman (or a worker assigned to the task) moves all non-affected personnel to a safe zone or directs them to remain where they are
- h. The foreman enables cell phone/radio silence on the jobsite, except for crisis communications from emergency responders. These communications are conducted on a cell phone
- i. The foreman sends a designated worker to the site gate to meet the response team (police, medical, fire, etc.) and ensure that they have a safe access path to the accident scene
- j. The foreman assembles the emergency rescue team at the accident site as quickly as possible to determine the best rescue procedure for the situation

**3. Rescue Procedures**

The following rescue procedures are ordered (a) through (d), with (a) being the preferred method and (d) being the method used when there is no other means of rescue.

- a. Elevating Work Platform Rescue** - If an elevating work platform (EWP) is available on site and the suspended worker can be reached by the platform, follow the procedure below:
  - i. Bring the EWP to the accident site and use it to reach the suspended worker
  - ii. Ensure that rescue workers are wearing full-body harnesses attached to appropriate anchors in the EWP
  - iii. Ensure that the EWP has the load capacity for both the rescuer(s) and the fallen worker. If the fallen worker is not conscious, two rescuers will probably be needed to safely handle the weight of the fallen worker
  - iv. Position the EWP platform below the worker and disconnect the worker's lanyard when it is safe to do so. When the worker is safely on the EWP, reattach the lanyard to an appropriate anchor point on the EWP if possible
  - v. Lower the worker to a safe location and administer first aid. Treat the worker for suspension trauma and any other injury
  - vi. Arrange transportation to hospital if required
- b. Ladder Rescue** - If an elevating work platform is not available, use ladders to rescue the fallen worker with the procedure outlined below:
  - i. If the fallen worker is suspended from a lifeline, move the worker (if possible) to an area that rescuers can access safely with a ladder
  - ii. Set up the appropriate ladder(s) to reach the fallen worker
  - iii. Rig separate lifelines for rescuers to use while carrying out the rescue from the ladder(s)
  - iv. If the fallen worker is not conscious or cannot reliably help with the rescue, at least two rescuers may be needed
  - v. If the fallen worker is suspended directly from a lanyard or a lifeline, securely attach a separate lowering line to the harness
  - vi. Other rescuers on the ground (or closest work surface) should lower the fallen worker while the rescuer on the ladder guides the fallen worker to the ground (or work surface)
  - vii. Once the fallen worker has been brought to a safe location, administer first aid and treat the person for suspension trauma and any other injury
  - viii. Arrange transportation to hospital if required.

**Procedure (con't)**

**3. Rescue Procedures (cont')**

The following rescue procedures are ordered (a) through (d), with (a) being the preferred method and (d) being the method used when there is no other means of rescue.

- c. Rescue from Work Area or Floor Below** - If the fallen worker is suspended near a work area and can be safely reached from the floor below or the area from which they fell, use the following procedure:
  - i. Ensure that rescuers are protected against falling
  - ii. If possible, securely attach a second line to the fallen worker’s harness to help rescuers pull the fallen worker to a safe area. You will need at least two strong workers to pull someone up to the level from which they fell
  - iii. Take up any slack in the retrieving line to avoid slippage
  - iv. Once the worker has been brought to a safe location, administer first aid and treat the person for suspension trauma and any other injury
  - v. Arrange transportation to hospital if required
- d. Basket Rescue** - If a worker has fallen and is suspended in an inaccessible area, you may need to perform a basket rescue. For basket rescues, the basket must be designed by a professional engineer in accordance with good manufacturing processes to withstand all loads to which it may be subjected. It must be kept on site at all times in an accessible location where it is clear of material or other equipment. Fit the rescue basket with appropriate rigging for quick hookup by the crane operator. Always keep the following items in the rescue basket:
  - i. First-aid kit
  - ii. Three lanyards equipped with shock absorbers
  - iii. One full-body harness
  - iv. Tag line attached to the basket at all times
  - v. Descent controller rescue device in good working condition
  - vi. Secondary safety line to tie the basket above the headache ball of the crane

**To perform a basket rescue, follow the steps below:**

1. Make sure preferred methods a, b, and c are not possible.
2. Notify the crane operator right away to position the crane to attach the basket.
3. While the basket is being attached, the crew leader checks that all safety rigging is done and all the required safety equipment is available.
4. With two rescuers in the basket, hoist it to a position that is above and as close as possible to the fallen worker. A designated worker on the ground guides the basket with a tagline. The designated worker must make sure that when the rescue basket reaches the right elevation, the door of the basket is facing the structural steel to provide an easy exit for rescuer #1.
5. Rescuer #1 exits the rescue basket and gets into a position to reach the fallen worker. When doing this, rescuer #1 must be tied-off at all times to either the structure or the rescue basket
6. Rescuer #2, who is still in the rescue basket, lowers the line that will be used to retrieve the worker. Rescuer #2 attaches an extra lanyard to the line if required.
7. Rescuer #1 assesses the fallen worker for injuries and then decides how to proceed (i.e., treat injuries first, guide the fallen worker into the rescue basket, or lower the basket to the ground with the fallen worker attached to it)
8. Once the fallen worker has been brought to a safe location, administer first aid. Treat the person for suspension trauma and any other injury
9. Arrange transportation to hospital, a designated worker must accompany the injured worker to hospital

**Procedure (con't)**

**3. Rescue Procedures (cont')**

If the basket rescue is the method used, keep the following points in mind:

- Perform a basket rescue only when it is not possible to use conventional equipment to rescue the fallen worker in a safe manner.
- Never exceed the maximum number of workers in the basket as indicated on the nameplate.
- Ensure that a competent worker inspects the crane and equipment being used prior to lifting rescuers.
- Always equip the crane with a fail-safe mechanism to prevent the boom from descending in the event of a power source or system failure.
- Maintain an adequate means of communication between the rescuers in the basket and the crane operator at all times.
- Ensure that workers in the rescue basket wear full-body safety harnesses attached to a lanyard and anchored to appropriate points in the basket at all times.
- Make sure that all rigging used to attach the rescue basket to the hook of a load line has a safety factor of 10 against failure. There should be a safety line attached to the load line directly from the basket.
- Do not allow cranes to travel while rescuers are in the basket.
- Do not use suspended rescue baskets during high winds, electrical storms, snow, ice, sleet, or other adverse conditions that could affect the safety of personnel on the platform or in the basket.

**4. Post Rescue Procedure**

All non-affected workers should remain in the designated safe gathering zone until the site supervisor notifies them to do otherwise. The foreman and safety coordinator should:

- a. Begin the accident investigation
- b. Quarantine all fall-arrest equipment that may have been subjected to fall fatigue effects and/or shock loading for further investigation
- c. Secure the area (the OHSA requires that an accident scene not be disturbed where a fatal or critical injury has occurred)
- d. Determine whether or not the jobsite-specific rescue and evacuation plans were followed as designed
- e. Record modifications or additions to the plans that the rescue team deems necessary
- f. Record all documented communications with fire, police, MOL, and other contractors involved (When a fall occurs and is arrested, you must notify the MOL in writing)
- g. Record all documented statements from employees, witnesses, and others
- h. Save all photographs of the incident
- i. Record all key information such as dates, time, weather, general site conditions, and specific accident locales including sketches of the immediate incident area, complete with measurements if applicable

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

This Job Procedure applies to all persons who use or service this heater. Failure to comply with instructions can result in death, serious bodily injury and property loss. The MINI-MACADEN 1000 was manufactured to mechanize the torch application of the Soprema thermoweldable membrane designed to waterproof roofs that require protection from air or water.

Hazards Present		
<ul style="list-style-type: none"> <li>● Death</li> <li>● Fire / Burns</li> </ul>	<ul style="list-style-type: none"> <li>● Serious Bodily Injury</li> <li>● Explosion</li> </ul>	<ul style="list-style-type: none"> <li>● Property Loss</li> <li>● Electrical Shock</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>● Heat Resistant Safety Gloves</li> <li>● Manufacturers Recommendations</li> </ul>	<ul style="list-style-type: none"> <li>● Eye Protection</li> <li>● Training/Supervision</li> </ul>	<ul style="list-style-type: none"> <li>● Hearing Protection (Unit emits a sound level of 90 decibels)</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>● Fire Extinguisher</li> <li>● 2 Assistant Operators</li> </ul>	<ul style="list-style-type: none"> <li>● Propane Tank</li> </ul>	<ul style="list-style-type: none"> <li>● Gasoline</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO read and understand manufacturer’s instructions and safety warnings</li> <li>● DO inspect all equipment before each use</li> <li>● DO always wear eye protection, hearing protection and heat resistant safety gloves</li> <li>● DO keep the propane gas line away from construction traffic and contact with hot surfaces during use &amp; storage</li> <li>● DO always keep the unit at a distance of at least 3.3 m (10 ft) from any propane tank</li> <li>● DO keep the unit at least 1.22 m (4 ft) from combustible materials</li> <li>● DO keep all doors on the unit closed and locked</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT alter or intentionally misuse equipment</li> <li>● DO NOT use the unit without attaching the two fire extinguishers, in good working order, to the housing</li> <li>● DO NOT start the engine without performing the pre-operation checks</li> <li>● DO NOT use the unit on a hot air duct system</li> <li>● DO NOT operate the unit in the dark</li> <li>● DO NOT operate the unit without the safety guards in place</li> <li>● DO NOT turn the gas engine off before the temperature of the air at the nose outlet has cooled to 40 deg. or less. Doing so will cause the membrane to ignite instantly</li> </ul>
---	---

**Procedure**

**1. Before you Operate the MINI-MACADEN 1000**

- a. For safe use, the MINI-MACADEN 1000 requires one operator and two assistant operators
- b. Make sure you understand the manufacturer’s operation manual
- c. Keep the work area clean. Remove obstacles that could cause personal injury to the operator or others
- d. NEVER stop the unit during membrane application when the burner is operating. Doing so will cause the membrane to ignite instantly. If this should occur, **push the burner safety push button** and use the extinguishers on the side of the housing to put out the fire
- e. Do not operate the unit on a sideways slope of more than 10 degrees (2 in 12)
- f. Read all safety warning labels before operation

**Procedure (con't)**

**2. Familiarize yourself with the unit**

- a. Compare the illustrations with the unit to familiarize yourself with the location of the parts (Fig.1 & 2)
- b. Compare the illustrations with the unit to familiarize yourself with the controls and settings (Fig.3)

Figure 1

Figure 2

Figure 3

**Procedure (con't)**

**3. Conduct a pre-starting inspection of equipment and work area**

- a. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight of workers, materials and equipment
- b. Fill the gas tank
- c. Check the engine oil according to the manufacturer's instructions
- d. Visually inspect the propane gas line. If it shows signs of excessive wear or is cut, it must be replaced before starting the burner
- e. Check along the length of the gas lines for leaks using the soap test
- f. The propane tank capacity must be 45kg (100 lbs)
- g. Check that bolts, nuts and other fasteners are tight
- h. Check that the unit has not been damaged during its previous use
- i. Refer to the maintenance manual for general inspection

Figure 4

**4. Lift the Machine to the Roof (Or loading on a trailer)**

- a. Inspect the hoist
- b. Make sure everyone on the ground is completely clear of the hoisting area
- c. Consult your "Hoisting" Job Procedure for complete hoisting procedures
- d. Use the anchor brackets attached to the side of the unit (Fig. 4)
- e. Leave the clutch engaged
- f. Put the support mandrel under the unit to prevent pressure on the pressure roller that might create a permanent deformity (Fig. 5)
- g. If loading on trailer, secure unit to trailer with straps
- h. Keep the engine level during transport to reduce the risk of fuel spillage
- i. Set the fuel shut-off valve to the "OFF" position during transport (Fig. 6)

Figure 5

**5. Operation**

- a. Pre-operation Checks
  - i. Check that the propane gas line is connected to the propane inlet fitting on the unit (See "Gas Ball Valve" – Fig. 3)
  - ii. Check that the propane gas line is on its bracket
  - iii. Check that the propane gas line is connected to the tank
  - iv. Open the propane inlet valve on the tank
  - v. Open the propane inlet valve on the unit
  - vi. Check that the pressure gauge does not exceed 103 kpa (15 psi)
  - vii. The unit must be at least 3m (10 ft) from any propane gas tank
  - viii. The unit must not be pointed directly at a propane tank located within 6m (20 ft)

Figure 6

**Procedure (con't)**

Figure 4

**5. Operation(con't)**

**b. Burner Safety Push Button (Fig.7)**

- i. Never stop the unit during membrane installation when the burner is operating because the membrane will ignite instantly
- ii. Should the membrane ignite or another problem occur, push the Burner Safety Push Button to immediately shut off the burner
- iii. To restart the burner, lift the Burner Safety Push Button

Figure 7

**c. Speed (Fig. 7)**

- i. The speed is indicated on the display. When the clutch button is at “V1”, the speed displayed is the operation speed at start-up
- ii. To increase the travelling speed of the unit, move the joystick up
- iii. To reduce the travelling speed of the unit, move the joystick down

**d. Guiding the unit**

- i. **Manual** - To maintain a straight path during straight-lined membrane installation, turn to the right by moving the joystick towards the engine or to the left by moving the joystick towards the operator
- ii. **Automatic** - To maintain a straight path during straight-lined membrane installation in automatic mode, set the guiding sensors button to the “R” or “L” position

**6. Starting up the unit**

- a. Make sure the Emergency Stop Push Button is in the “up” position.
- b. Turn the 12 V DC switch to the “on” position.
- c. Start the engine using the following procedure:
  - i. Turn the fuel shut off valve to the “on” position
  - ii. If the engine is cold:
    - 1. Set the throttle halfway between the “slow” and “fast” positions
    - 2. Set the choke lever to the “on” position
  - iii. If the engine is hot:
    - 1. Set the throttle halfway between the “slow” and “fast” positions
    - 2. You do not need to use the choke

**Procedure (con't)**

Figure 7

**6. Starting up the unit (con't)**

**d. For pull start engines:**

- i. Turn the fuel shut-off lever to the “ON” position.
- ii. Turn the Electric engine starter switch to the “ON” position.
- iii. Pull the handle of the cord SLOWLY until it has gone past the compression zone - STOP.
- iv. Return the cord handle, pull firmly and smoothly (do not jerk), to start. Pull the cord straight out from the unit to prevent excessive wear on the pull-start cord
- v. Pull the cord out to its full length periodically to check its condition. If the cord is frayed, replace it immediately

**e. For an electric start engine**

- i. Turn the key switch to “Start” and hold in this position to electrically crank engine until it starts, then release the key.

**NOTE:** If engine fails to start after cranking for 10 seconds, release the key and allow a 60 second cool down period to prevent burning out the starter motor.

**7. Preparation, installation and thermowelding of the membrane roll**

- a. Place the membrane roll on the ground in a vertical position with the overlap strip to the top.
- b. Remove the 3 adhesive strips from around the roll.
- c. Insert the mandrel into the roll. (Fig. 8)
- d. Make sure the burner is off by pushing down the Burner Safety Push Button** (yellow push button)
- e. Place the roll with the mandrel into the unwinder support.
- f. Unroll approximately 1.2 m (4ft) of the membrane.
- g. Insert the end of the membrane between the burner nose outlet and the membrane guide.
- h. While the operator lifts the pressure roller by pressing down on the handles of the unit, one of the assistant operators runs the membrane under the pressure roller and about 30 cm (1ft) past it. (Fig. 9)
- i. Line the unit up with the membrane roll to ensure good longitudinal coverage and good edge overlap.

Figure 8

**j. Starting in manual mode**

- i. Lift Burner Safety Push Button (yellow push button)
- ii. Turn the clutch button (green button) to V0
- iii. Start the burner using the burner ignition button (red button)
- iv. When smoke begins to appear, turn the clutch button (green button) to “V1” to reach the preprogrammed speed
- v. To keep the unit on its path during a rectilinear installation, **turn to the right** by moving the **joystick towards the engine** or **to the left** by moving the **joystick towards the operator**
- vi. To maintain even bleed-out (Fig. 10), adjust the speed of the unit by moving the joystick up to increase speed or down to reduce speed
- vii. During this time, the assistant operators oversee the installation of the membrane, making sure that all safety rules are obeyed (e.g: propane gas supply line is not in the path of the unit) and warning the operator of any irregularities that could cause injury or defects

Figure 9

**Procedure (con't)**

**7. Preparation, installation and thermowelding of the membrane roll (con't)**

**j. Starting in manual mode (con't)**

- viii. When you come to the end of the membrane roll, turn the burner ignition switch to “OFF” (red button)

**k. Starting in automatic guiding mode**

- i. Make sure that the Burner Safety Push Button (yellow button) is in the up position
- ii. Turn the guiding button (black) to “R” or “L”
- iii. Turn the clutch button (green button) to V0
- iv. Start the burner using the burner ignition switch (red button)
- v. When smoke begins to appear at the nose outlet, turn the clutch button (green button) to “V1” to reach the pre-programmed speed
- vi. A rectilinear membrane installation is maintained by an automatic guiding system
- vii. To maintain even bleed-out (Fig. 10), adjust the speed of the unit by moving the joystick up to increase speed or down to reduce speed
- viii. During this time, the assistant operators oversee the installation of the membrane, making sure that all safety rules are obeyed (e.g: propane gas supply line is not in the path of the unit) and warning the operator of any irregularities that could cause injury or defects
- ix. When you come to the end of the membrane roll, turn the burner ignition button to “OFF” (red button)

**NEVER LEAVE THE BURNER RUNNING WHEN THE UNIT IS STOPPED. DOING DO WILL CAUSE THE MEMBRANE TO IGNITE INSTANTLY.**

**IN CASE OF FIRE:**

1. **PRESS THE BURNER SAFETY PUSH BUTTON**
2. **MOVE THE UNIT AWAY FROM THE FIRE**
3. **CLOSE THE GAS VALVE AT THE UNIT**
4. **CLOSE THE PROPANE GAS VALVE AT THE PROPANE TANK**
5. **USE THE FIRE EXTINGUISHERS TO PUT OUT THE FIRE**

**8. How to shut off the unit**

- a. a) Close the propane supply valve on the unit.
- b. b) Close the valve on the propane tank.
- c. c) Shut off the engine as follows:
  - i. Set the throttle control to the “Slow” position.
  - ii. Let the engine run on slow for 30 to 60 seconds.
  - iii. Turn the key switch to “Off”.
  - iv. Set the 12 V DC circuit breaker to the “Off” position. This isolates the battery from the electronic components when the unit is completely shut down.
  - v. Put the support mandrel under the unit to avoid pressure on the pressure roller that will create a permanent deformity. (See Fig.5)

Figure 10

**9. Maintenance - See User’s Manual for maintenance schedule and instruction**

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

Drum/Pail Heaters are designed to provide practical, efficient means of freeze protection, viscosity control and maintenance of materials at elevated temperatures.

Hazards Present		
<ul style="list-style-type: none"> <li>Explosion</li> <li>Fire / Burns</li> </ul>	<ul style="list-style-type: none"> <li>Serious Bodily Injury</li> <li>Death</li> </ul>	<ul style="list-style-type: none"> <li>Property Loss</li> <li>Electrical Shock</li> </ul>
Protective Mechanisms		
<ul style="list-style-type: none"> <li>Manufacturers Recommendations</li> </ul>	<ul style="list-style-type: none"> <li>Eye Protection</li> </ul>	<ul style="list-style-type: none"> <li>Training/Supervision</li> </ul>
Equipment / Tools Required		
<ul style="list-style-type: none"> <li>Fire Extinguisher</li> </ul>	<ul style="list-style-type: none"> <li>Propane Tank</li> </ul>	<ul style="list-style-type: none"> <li>Band Heater</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO read and understand manufacturer’s instructions and safety warnings</li> <li>DO inspect heater before use</li> <li>DO fasten heater to device using approved methods only</li> <li>DO disconnect heater when not in use</li> <li>DO use specified sized heater with same sized drum, do not use for other applications</li> <li>DO keep volatile or combustible material away from heater when in use</li> <li>DO keep sharp metal objects away from heater</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>DO NOT alter or intentionally misuse equipment</li> <li>DO NOT immerse heater in liquid</li> <li>DO NOT handle the heater while it is in operation. Disconnect from power source and allow to cool</li> <li>DO NOT operate a heater without a temperature control device</li> <li>DO NOT wrap the heater over itself</li> <li>DO NOT operate heater above rated temperature value</li> <li>DO NOT repair faulty or damaged heaters</li> <li>DO NOT crush or apply severe physical stress on heater or cord assembly</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li><b>Before installing band heater</b> <ol style="list-style-type: none"> <li>Check for suspected damage to the heater like rips, punctures, etc</li> <li>Verify surface to be heated is free from all sharp edges, weld splatter, rust, oil, etc</li> <li>Check that the desired placement of the heater will not cause damage to the heater through impact shock, vibration, ambient temperature, or by neighboring moving parts</li> <li>Confirm voltage / wattage rating of heater is appropriate for power supply device or temperature controller. The heater is designed to work at a specific voltage to heat properly</li> <li>Confirm heater maximum exposure temperature rating is suitable for environment. The temperature of the internal heating element may run up to 25% higher than the external surface of the heater</li> <li>Do NOT connect to AC power until all installation steps are completed</li> </ol> </li> <li><b>Installation of heater</b> <ol style="list-style-type: none"> <li>Verify propane cylinder surface is clean, free from all sharp edges, weld splatter, rust, oil, etc</li> <li>Place heater at the bottom of the propane cylinder (below the lowest expected content level)</li> <li>Wrap the heater around the propane cylinder.</li> <li>Extend the spring attached to the metal tab; latch the spring loop onto the hook on the opposite side. (Fig.1)</li> <li>Verify there are no air gaps between the heater and the propane cylinder</li> </ol> </li> </ol>	
--	---

**Procedure (con't)**

Figure 1

**NOTE:** Do not use metal tabs as a handhold when extending the spring. The heater **MUST** make continuous contact with the cylinder. Do not overlap the heater onto itself or another heater.

**3. Turning on and using the heater**

- a. Adjust the dial to the desired setting. This will be approx. 300 degrees F, in any range of cold temperature, for the purpose of this procedure. If the heater is set at too high of a temperature the propane will turn to a liquid state and cause the torch to shoot a very long flame (approx. 10 feet)
- b. Turn temperature dial to OFF when on break and lunch

**4. Shutdown and storage**

- a. Disconnect the heater unit at end of day
- b. Store heater belt in a clean, dry plastic bucket with a snap on cover. Store out of weather in a clean dry environment

**5. Troubleshooting**

Problem	Solution
Does not heat	Verify heater is connected to proper voltage, the identification label located on the power cord displays the heater’s voltage Requirements  Check to see if there is a resistance reading (not an open circuit) in heater using ohm meter
Circuit breaker is tripping	Validate that the circuit breaker is capable of handling the amp requirement of heater. The identification label located on the power cord displays the heater’s amperage requirements  Examine heater and cord for any damage
Does not fit	Confirm that the heater provided was designated to fit around your specified cylinder
Something has lightly spilled on exterior or interior	Apply any general household cleaner, that does not contain any silicone rubber dissolving type ingredients, with a clean cloth fabric.

**\* See Instruction Manual for more Troubleshooting contact information.**

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

**General**

The Miller Edge Fall Protection System is a portable engineered anchorage solution designed to protect decking/roofing crews from fall hazards. The Miller Edge reduces the need for a safety monitor or a temporary cable lifeline system on leading edge deck/roof construction.

Hazards Present		
• Serious Injury	• Death	
Protective Mechanisms		
• PPE	• Manufacturers Recommendations	• Training/Supervision
Equipment / Tools Required		
• Crane and/or Hoist	• Rigging Equipment	• Warning Signs/Tape or Barricades
• Miller Edge	• Ballast Weight	• Approved SRL
• Full Body Harness & Lanyard		

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO ensure that fall protection plans are site specific and address the type of equipment used at the workplace</li> <li>• DO inspect all equipment before each use</li> <li>• Do remove from service if defects are found</li> <li>• DO read and understand manufacturer’s instructions</li> <li>• DO use caution around moving machinery, electrical hazards and chemical hazards</li> <li>• DO have a rescue plan and the ability to implement a rescue. Training should be provided on a periodic basis</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT alter or intentionally misuse equipment</li> <li>• DO NOT use if defects are found</li> <li>• DO NOT install or use if you have not been trained in its correct application and use</li> <li>• DO NOT throw or drop any equipment from building or heights</li> <li>• DO NOT use on solid ice</li> <li>• DO NOT use on uneven or sloped surfaces greater than 5% from the horizontal</li> </ul>
---	--

**Procedure**

**1. Limitations**

- a. Floor Structure: The structure to which the unit is used must be no less than 5/8” (15.9mm) thick plywood and capable of supporting the weight of the system and the loads applied by the system in event of a fall. The surface must be even and no greater than a 5% grade from horizontal.
- b. System Capacity: The maximum number of users is **two**. Only 1 (one) user per individual anchor point is permitted. The capacities are based on maximum user’s weight, including tools, clothing, etc. **Maximum capacity for each attachment point is 310 lbs. (140.6 kg). Do not exceed.**
- c. Component Compatibility: Unit is designed for use with Miller retractables and approved components only. Only use Miller retractables and approved compatible connectors.

**Procedure (con't)**

**2. Conduct a pre-starting inspection of equipment and work area**

- a. A competent person must perform an Annual Formal Inspection of the entire system and all components
- b. Check each component (i.e., wheels, anchorage points, jacks) for physical damages, cracks, wear, corrosion and workability
- c. Check all bolts for damages, cracks, looseness, wear, and corrosion
- d. Check to ensure that each push pin has been secured in place with a hitch pin and inspected for damage, worn, bent or broken parts
- e. Inspect for malfunctioning components, broken or missing pins and fasteners. Replace if necessary
- f. Inspect wheels to ensure that each rotates and moves freely and inspect for cuts, breaks, broken areas, excessive wear. Also, ensure that each wheel is securely fastened
- g. Inspect brake jacks to ensure that each works properly and is capable of raising the unit when crank handle has been rotated clockwise to a complete stop
- h. Inspect all welds throughout the unit for cracks, breaks, or corrosion
- i. Inspect system and all personal fall protection according to the manufacturer’s instructions
- j. Inspect the roof area for trip hazards, openings, electrical hazards, etc
- k. Check the roof and deck for deterioration before allowing personnel or equipment access to the roof. Make certain the roof and structure is strong enough to support the weight
- l. Identify appropriate setup area on the roof

Figure 1

Figure 2

Figure 3

**3. Lifting the unit**

- a. Inspect to make sure the hitch pins are securely installed to the push pins (Fig. 1)
- b. Lift by using both of the lifting rings provided. (Fig. 2) DO NOT use lifting rings for fall protection
- c. Make sure everyone on the ground is completely clear of the hoisting area
- d. Consult your “Hoisting” Job Procedure for complete hoisting procedures before proceeding.

**4. Installation Distance**

- a. Ensure the unit has been placed at a minimum of 2 feet from the front of the unit to the leading edge of the work surface and 3 feet from either side of the unit to the side edge of the work surface. (Fig. 3)
- b. DO NOT use the unit if installed less than the required distance from the edge. Failure to do so may cause serious or fatal injury should a fall occur.

**Procedure (con't)**

**5. Working Distance**

- a. The working distance is the maximum distance a user can work away from the system while anchored to the unit
- b. The maximum working distance forward, measuring from the vertical boom is 26 feet
- c. The maximum working distance from the side of the unit, measuring from the vertical boom is 12 feet
- d. Do not exceed working distance requirements

**6. General Operation**

- a. Put on a full body harness according to the manufacturer’s instructions
- b. Once the installation and working distance requirements are understood and have been satisfied, lower each of the brake jacks completely by rotating the brake jack handle clockwise until each stops rotating. Be sure to lower completely. Failure to do so could hinder the performance of the unit in the event of a fall and may cause serious or fatal injury. (Fig. 4)
- c. Install only Miller retractable lifelines and use personal fall protection according to the manufacturer’s instructions
- d. The personal fall protection used with this device must limit the fall arresting forces to 900 lbs. (4 kN) or less and be rigged to limit fall distance to within regulatory requirements and prevent the user from striking a lower surface in the event of a fall

Figure 4

**7. Moving the unit**

- a. When the unit needs to be moved, disconnect each worker from the unit, raise each of the brake jacks completely by rotating the brake jack handle counter clockwise
- b. Move the unit by using the pushing handle located at the rear of the unit
- c. Steering the unit is accomplished by using the steering handles located on the vertical boom located at the front of the unit
- d. Never expose a worker(s) to a fall hazard by pulling the unit from the handles located on the vertical boom or from the anchorage points while connected to the unit
- e. Once the unit has been moved, lower each of the brake jacks completely by rotating the brake jack handle clockwise until each stops rotating
- f. Connect to the system by using one of the anchorage points located on the horizontal boom
- g. Connectors used with this system must be able to support a minimum of 5,000 lbs (22kN) Non Approved, non compatible components may cause disengagement (roll-out). Only self locking, self closing connectors are recommended

**8. Cleaning**

- a. Periodically clean the unit using a damp cloth and a non-abrasive mild soap or detergent. Towel dry

**9. Storage**

- a. Before storing, clean the unit to remove any dirt, grease or other materials that may have accumulated
- b. Store in a clean dry area when not in use

**Procedure (con't)**

**10. Servicing**

- a. Servicing must only be carried out by a qualified person trained in the inspection and replacement of this system
- b. This unit and all components of the system must be removed from service if subjected to fall arresting forces

**General**

To ensure a proper fit and adjustment of your fall protection harness. As well as to ensure that daily inspections are performed.

Hazards Present		
• Property Damage	• Personal Injury	• Loss of Product
Protective Mechanisms		
• Adjusters & Equipment	• Job Procedure	• Local, Regional & Federal Regulations
• Training		

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO inspect all parts of the harness</li> <li>• DO ensure all lanyards are tangle free</li> <li>• DO double check connections</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>• DO NOT use if defective in any way</li> <li>• DO NOT leave ppe unattended on job site</li> </ul>
---	--

**Supervisor Responsibility**

- Supervisors are responsible to ensure that all employees are wearing their harnesses
- Enforcement & Compliance

**Employee Responsibility**

- Lift the harness by the back D-ring and untangle straps. Allow leg straps to hang free
- Don the harness as you would a jacket. Pass one arm through each of the shoulder straps keeping the fall arrest D-ring to the back. Position the shoulder straps evenly across the shoulders
- Reach down between the legs and grasp the left leg strap. Draw it up between the legs and attach the buckle to the torso of the harness. Repeat with the other leg strap
- Fasten the chest strap buckle. Adjust the chest strap so that it is located 15 cm (6 inches) below the shoulders before adjusting it for fit.
- Connect the chest strap by passing male buckle through female buckle, pass excess webbing through loop keepers
- Refer to the figure below and become familiar with adjusting procedures for each buckle type. Adjust shoulder straps to a snug fit. Left and right shoulder straps should be adjusted to the same length. Readjust leg straps, chest straps, and shoulder straps as necessary to a snug fit. Once adjusted, the chest strap should prevent the harness shoulder straps from slipping off the shoulder. Ensure that the sub pelvic strap is located beneath the buttocks at final adjustment. Center the back D-ring between the shoulder blades before use. It can be adjusted by pulling the web components through the D-ring pad in the desired direction.
- Adjustment and fastening elements must be regularly checked before and during use.

**Employee Responsibility (con’)**

- Inspecting of the harness must inspect all hardware (buckles, D-rings, back pad, etc)
- Harness and lanyard must not be:
  - Damaged
  - Broken
  - Distorted
- Must be free of:
  - Sharp edges
  - Burrs
  - Cracks
  - Worn parts
  - Corrosion
- Ensure buckles work freely
- Inspect parachute buckle spring
- Inspect webbing material must be free of:
  - Frayed, cut or broken fibers
  - Tears
  - Abrasions
  - Mold
  - Burns
  - Discoloration
- Inspect stitching:
  - Pulled stitches
  - Cut stitches
  - Broken stitches may be an indication that the harness or lanyard have been impact loaded and must be removed from service
- Inspect impact indicator
  - If stitching is pulled, cut or broken; it may be an indication that the harness has been impact loaded and must be removed from service.
  - If the warning “UNIT HAS BEEN IMPACT LOADED REMOVE FROM SERVICE” remove from service immediately
- Inspect labels
  - All labels should be present and fully legible
- If inspection reveals a defective condition of any time, remove the harness or lanyard from service immediately and destroy

Please contact Safety Coordinator @ 506-576-6683, if you have any questions regarding what is expected for the procedure or for clarification

# Company Rules

---

## Section 5

# Disciplinary Policy

---

## Section 5.1

## 5.1 Disciplinary Policy

### Purpose

This policy is written to establish a consistent procedure for maintaining suitable behaviour and a productive working environment in the workplace. These procedures are a guideline and minor differences of the process as follows shall not affect the authority of any actions taken consistent to this policy.

### Policy

Every Supervisor and/or Persons in charge of a workplace will make sure that everyone on the work site will comply with OHSA & Regulations. Upon breach of Atlantic Roofers Limited/North Shore Roofing Ltd.'s Policies, rules or OHSA & Regulations, the following disciplinary actions will be administered:

1st Instance	Verbal Warning
2nd Instance	Written Warning
3rd Instance	Suspension or Permanent Dismissal/Termination of Employment

All notices shall be explained to any employees, their supervisors, subcontractors, and union (through representative if applicable) regarding violations. Copies shall be distributed to all applicable parties and personnel records.

At any step in the process, an employee may be sent home without pay, pending investigation. Likewise, subcontractors or any person performing work for Atlantic Roofers Limited/North Shore Roofing Ltd. may be asked to discontinue work, without notice.

Individuals will be dismissed without prior notice if their actions are deemed to pose an immediate risk to themselves, coworkers and/or Atlantic Roofers Limited/ North Shore Roofing Ltd.

### Responsibilities

#### Management

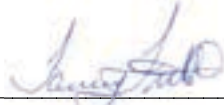

Management is responsible to uphold this policy at all times and to conduct necessary investigation when an incident arises. Management reserves the right to make the final call on all investigations, save those that are investigated by an external governing body.

#### Supervisors

Supervisors are to uphold the policies at all times and report any issues to management right away.

#### Employees

All Employees are to abide by company rules, procedures and policies at all times. Each employee is expected to know and understand rules, procedures and policies. Employees are expected to ask questions when something is not clear or is not understood.

\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.

# General Safety Rules

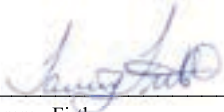

---

## Section 5.2

## 5.2 General Safety Rules

1. The use, possession or distribution of alcohol, illegal drugs, firearms and unauthorized explosives while on Atlantic Roofers Limited/North Shore Roofing Ltd. owned premises, rented premises, job sites, company owned vehicles, rented vehicles and personal vehicles while on company business is prohibited.
2. Employees who are taking over the counter or prescription medication that could affect their ability to perform their duties are to notify their supervisor in confidence.
3. Fighting, horseplay, practical jokes, or otherwise interfering with another worker, is prohibited.
4. Arriving for work or remaining at work when ability to perform work safely is impaired is prohibited.
5. Smoking is restricted to approved areas only.
6. The employees shall not use the compressed air to clean the dust off their clothing or their body.
7. Any accidents that involve the public are reported directly to the Safety Coordinator and Branch Manager.
8. Theft, vandalism or any other abuse or misuse of company property is prohibited.
9. All incidents that result in damage or injury, all unsafe acts and conditions, including a "near miss" incident, no matter how slight, are to be reported to your supervisor immediately.
10. Vehicle/equipment operators shall have a valid license and/or operating ticket when required.
11. First Aid treatment is to be obtained promptly, for any injury.
12. All work shall be conducted in accordance with appropriate safe work practices, job procedures and your supervisor's direction.
13. Every employee shall practice good housekeeping and keep his/her work area neat, clean and orderly.
14. Operate all vehicles and mobile equipment in accordance with site rules and highway regulations.
15. Running is not permitted, except in extreme emergencies.
16. Jumping from equipment is prohibited.
17. Unauthorized riding on equipment, hoists, hooks, and other material is strictly prohibited.
18. Clothing shall be appropriate to the climatic conditions, and to the duties being performed. CSA approved personal protective equipment must be worn when required by regulation of the Occupational Health and Safety Act and as directed by the employer by all employees.

# Personal Protective Equipment

---

Section 6

# Personal Protective Equipment Policy

---

Section 6.1

## **6.1 Personal Protective Equipment Policy**

### **Purpose**

Personal Protective Equipment (PPE) if used correctly will protect the worker from hazards they are exposed to on the worksite. Administration and engineering controls will be the primary methods used to control workers from injury and PPE will provide the additional degree of protection. All employees, contractors, suppliers and visitors must comply with the PPE policy, as required.

### **Policy**

Personal Protective Equipment (PPE) is required by the Occupational Health and Safety Act and Regulations and must be considered a condition of employment and will be worn as required without exception.

It is the policy of Atlantic Roofers Limited/North Shore Roofing Ltd that all employees, visitors and guests use the following PPE while on our work sites:

1. CSA approved Type 2 Class E hard hat
2. CSA approved 8" laced steel toe boot
3. Work-grade long trousers
4. High visibility clothing (Vest, T-Shirt, Jacket, etc.)
5. A sleeved shirt (where appropriate for handling hot material or asphalt)
6. Any other specialty PPE such as hand protection, eye protection, hearing protection, respiratory protection, fall protection, UV protection, etc.

These requirements do not apply when inside offices, lunchrooms, or in the cab of an enclosed vehicle. Atlantic Roofers Limited/North Shore Roofing employees must adhere to client fall protection requirements if they exceed the legislated standard. If a guardrail system is not available, a fall arrest or travel restraint system must be used.

The standard height at which fall protection is required in Canada is 10 ft (3 m). However, some clients follow the more stringent US OSHA standard. In the Construction Industry, employees must use fall protection on a walking or working surface with an unprotected side/edge which is 6 ft (1.8 m) or more above a lower level (OSHA 1926.501b). In General Industry, fall protection for wall openings and holes must be used at a height of 4 ft (1.2 m) (OSHA 1910.23b).

### **Responsibilities**

#### **Management**

- I. Ensure the PPE policy is complied with
- II. Provide all employees with the necessary training on PPE.
- III. Ensure the following inspection protocol is followed for Fall protection systems:
  - Each employee shall visually inspect each component of the fall protection system before use during a shift
  - All fall protection equipment shall be inspected by a competent person before the initial use and periodically as per manufacturers, installer, or engineer recommendation or as ordered by an enforcement officer.

### Supervisors

- I. Ensure the appropriate PPE is available for employees who require it.
- II. Ensure PPE is maintained in accordance with CSA standards and manufacturer's instructions.
- III. Ensure appropriate PPE is determined through the hazard assessment.
- IV. Provide all employees with the necessary training on PPE.
- V. Maintain appropriate training, inspection and maintenance logs for specialty PPE (i.e. fall arrest harnesses).

### Workers

- I. Use, maintain, and clean according to CSA standards.
- II. All PPE will be used within the requirements of the Occupational Health and Safety Act and CSA standards.
- III. The employee using the PPE will inspect PPE at time of issue and before each use during the shift.
- IV. All PPE that is of questionable reliability, damaged, or in need of service or repair will be removed from service immediately.

### Visitors

- I. All visitors are responsible for complying with the site PPE requirements.

### PPE Training

Before doing work requiring use of PPE, employees must be trained to know when PPE is necessary, what type is necessary, how it is worn, what its limitations are, and the proper care, maintenance, useful life, and proper disposal of PPE.

A record of this training shall be kept in the employee's personnel file. The training record shall include the name of the employees trained, the date(s) of training, and identify the PPE trained on.

\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.

*\*The policies and procedures contained within this health and safety program do not take precedence over any occupational health safety and/or environmental legislation in the jurisdiction in which the work is being carried out. <b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>  Occupational Health & Safety Program	Date of last Revision: Sept. 2014	Document No. <b>S-06-7</b>
	Title: <b>PPE Issue Agreement</b>	

Branch Location: \_\_\_\_\_

You have been assigned Atlantic Roofers Limited/North Shore Roofing Ltd, owned equipment (listed below) to complete your job duties and, accordingly, you are temporarily assuming responsibility for the item(s).

The Company is deeply concerned with safety in the workplace. If you are unsure of the proper and safe way to use any piece of equipment, you must contact your supervisor immediately. You should never use any piece of equipment in a way that you know or suspect may be unsafe. Likewise, you should immediately report any problems or damage to, or resulting from, an Atlantic Roofers Limited/North Shore Roofing Ltd piece of equipment as well as any theft of the equipment.

You should take reasonable precautions to protect the equipment and comply with any applicable Atlantic Roofers Limited/North Shore Roofing Ltd policy regarding use of the equipment. You also shall not use Company equipment for non-work related tasks, or allow non-employees to use the equipment. When the task has been completed for which the equipment was needs, you must promptly return it.

Failure to return or properly account (by, for instance, explaining reasonable precautions that were taken) for equipment belonging to the Company will result in, among other things, deductions from your pay. All equipment being returned must pass inspection and substitutions will not be accepted.

Specifically, the value of the equipment will be deducted from your next paycheck after you have been requested to return your equipment. If your employment with Atlantic Roofers Limited/North Shore Roofing Ltd ends before the cost of the equipment has been recovered from your pay, the remaining (or, if applicable, the entire) values of the equipment will be deducted from any accrued vacation or other paid benefits, that are typically paid out upon separation of employment. Atlantic Roofers Limited/North Shore Roofing Ltd may also pursue other legal and criminal remedies if warranted.

I, \_\_\_\_\_ (print name) acknowledge the forging terms of using Atlantic Roofers Limited/North Shore Roofing Ltd owned equipment and agree to abide by its terms.

# Personal Protective Equipment (PPE) Info Sheets

---

Section 6.2

## Eye and Face Protection Info Sheet

### General Information

This PPE is designed to protect the worker from such hazards and is mandatory where there is a risk of:

- Flying objects and particles,
- Molten metals,
- Splashing liquids, and
- Ultraviolet, infrared and visible radiation (welding).

This PPE has two types. The first type, “basic eye protection”, includes:

- Eyecup goggles, and
- Mono-frame goggles and spectacles with or without side shields.

The second type, “face protection”, includes:

- Metal mesh face shields or radiant heat of hot and humid conditions,
- Chemical and impact resistant (plastic) face shields,
- Welders shields or helmets with specified cover, and
- Filter plates and lens

**Hardened glass prescription lenses and sport glasses are not an acceptable substitute for proper, required industrial safety eye protection.**

Comfort and fit are very important in the selection of safety eyewear. Lens coatings, venting or fittings may be needed to prevent fogging or to fit with regular prescription eyeglasses.

Contact lens should **NOT** be worn at the work-site. Contact lenses may trap or absorb particles or gases causing eye irritation or blindness. Hard contact lenses may break into the eye when hit.

Basic eye protection should be worn with face shields. Face shields alone often aren’t enough to fully protect the eye from work hazards. When eye and face protection are required, advice from the WHSCC office, Data Safety Sheet (SDS) or your supplier will help in your selection.

For more information, refer to:

- Provincial, Federal and/or State Occupation Health and Safety Act, Regulations and Code of practices

### Do

- ✓ Ensure your eye protection fits properly (close to face)
- ✓ Clean safety glasses daily, more often if needed
- ✓ Store safety glasses in a safe, clean, dry place when not in use
- ✓ Replace pitted, scratched, bent and poorly fitted PPE (damaged face/eye protection interferes with vision and will not provide the protection it was designed to deliver).

### Don’t

- ✗ Modify eye/face protection
- ✗ Use eye/face protection that does not have a CSA certification (CSA stamp for safety glasses is usually on the frame inside the temple near the hinges of the glasses).
- ✗ Wear contact lenses at the worksite, contact lenses may trap or absorb particles or gases causing eye irritation or blindness. Hard contacts may break into the eye when hit.

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

## Fall Protection Info Sheet

### General Information

Body harnesses can be used for travel restrict systems but must be used for fall arrest systems. The harness is worn around the body and usually used in conjunction with a lanyard, rope grab and life line. While a shock absorber is required if the worker can free fall over 4 feet (to reduce the shock level of any fall), it is required that a shock absorber be used in any fall arrest system. All fall protection systems components must be CSA Approved.

A lifeline should never be used as a service line. The only time a lifeline becomes a load bearing line is in the event of a fall. At all other times it should be just slack enough to permit free movement around any service lines.

### Usage

A Fall Protection System means a guardrail, a travel restraint system, a fall arresting system, a fall restricting system, that is either a personal fall restricting system or a collective fall restricting system that was designed to:

- Prevent or eliminate the risk of falling
- Restrain an employee who is at risk of falling
- Stop an employee who has fallen

Fall protection is required when working from an unguarded work area that is:

- 10 feet (3 meters) or more above water or the nearest permanent safe level
- Above a surface or object that could cause injury upon contact, or
- Above any open top tank, bin, hopper or vat.
- At locations or during activities as identified by Atlantic Roofers Limited/North Shore Roofing Ltd. management.

\*\*Formal Training in fall protection is required every 3 years (at minimum).

### Do

- ✓ Obtain expert advice before purchasing a fall arresting device
- ✓ Properly train and practice with the system you decide to use to ensure competency
- ✓ Use webbing type harnesses instead of leather harnesses
- ✓ Inspect all components of the fall protection system carefully before each use (inspection by a competent worker)
- ✓ Have the harness fitted snugly to the worker
- ✓ Ensure that the anchor points are secure to support the load in the event of a fall
- ✓ Follow the manufacturer's instruction on inspection , care and use
- ✓ Ensure all lines used with the systems have thimbles
- ✓ Use only the proper safety rated fastenings with the system
- ✓ Use a full body harness with shock absorber

### Don't

- ✗ Modify, change or put additional holes in the harness or hardware
- ✗ Jerry-rig the system
- ✗ Use the system for any other than its intended use
- ✗ Use the lifeline for a service line.

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

## Foot Protection Info Sheet

### General Information

Safety footwear is designed to protect against foot hazards in the workplace. Safety footwear protects against compression, puncture injuries, and impact. The use of foot protection is mandatory.

Safety footwear is divided into three grades that are indicated by colored tags and symbols.

The tag color tells the amount of resistance the toe will supply to different weights dropped from different heights.

The symbol indicates the strength of the sole. For example, a triangle means puncture-resistant sole able to withstand 135 kg (300 flbs) of pressure without being punctured by a 5 cm (2 inch) nail; for more information, OSGR Part 3 12(1).

In construction, it is recommended that only the green triangle grade of footwear, which also gives ankle support, be used.

Your choice of protective footwear should always over protect, not under protect.

### Do

- ✓ Choose footwear according to job hazard and CSA Standards
- ✓ Lace up boot and tie laces securely; boots don't protect if they are a tripping hazard or fall off
- ✓ Use protective boot dressing to help the boot last longer and to provide greater water resistance. (wet boots conduct current)
- ✓ Choose a high cut 8" laced boot to provide ankle support (less injuries)

### Don't

- ✗ Wear defective safety footwear (i.e., exposed steel toe caps)
- ✗ Under protect your feet or modify safety footwear

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

## Head Protection Info Sheet

### General Information

Safety headwear is designed to protect the head from impact from falling objects, bumps, splashes from chemicals or harmful substances, and contact with energized objects and equipment. The use of head protection is mandatory.

In construction, only CSA approved hard hats are acceptable. There are many designs but they must all meet the CSA requirements for industrial head protection.

Most head protection is made up of two parts:

- The shell (light and rigid to deflect blows)
- The suspension (to absorb and distribute the energy of the blow)

Both parts of the headwear must be compatible and maintained according to manufacturer's instructions. If attachments are used with headgear, they must be designed specifically for use with the specific headwear used. Bump caps are not considered a helmet.

### Inspection and Maintenance

Proper care is required for headgear to perform efficiently. The service life is affected by many factors including temperature, chemicals, sunlight and ultraviolet radiation (welding). The usual maintenance for headgear is simply washing with a mild detergent and rinsing thoroughly.

#### Do

- ✓ Replace headgear that is pitted, holed, cracked or brittle
- ✓ Replace headgear that has been subjected to a blow even though damage cannot be seen
- ✓ Remove from service any headgear if its serviceability is in doubt
- ✓ Replace headgear and components according to manufacturer's instructions
- ✓ Use liners that are only specified for brand of hardhat

#### Don't

- ✗ Drill, remove peaks, and alter the shell or suspension in any way
- ✗ Use solvents or paints on the shells (makes shells "break down")
- ✗ Put chin straps over the brims of headgear
- ✗ Use any liner that contains metal or conductive material
- ✗ Carry anything in the hard hat while wearing the hard hat
- ✗ Wear your hardhat incorrectly – backwards - sideways

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

# Hearing Protection Info Sheet

## General Information

Hearing protection is designed to reduce the level of sound energy reaching the inner ear and is mandatory in designated areas.

**The “rule of thumb” for hearing protection is: use hearing protection when you can’t carry on a conversation at a normal volume of voice when you are three feet apart.**

Remember, this is only one rule of thumb. Any sustained sound over 80 dba requires hearing protection. Hearing loss can be very gradual, usually happening over a number of years.

The most common types of hearing protection in the construction industry are **earplugs** and  **earmuffs**. If you choose to use the other types of hearing protection, ask your safety supplier or Department of Labour office for further information.

It is important to have different styles of hearing protection available. Different styles allow a better chance of a good fit. Each person’s head, ear shape and size is different. One style may not fit every person on your crew. If hearing PPE does not fit properly or is painful to use, the person will likely not use it. If hearing protection is not properly fitted, it will not supply the level of protection it was designed to deliver.

Most earplugs, if properly fitted, generally reduce noise to the point where it is comfortable (takes the sharp edge off the noise).

**If your hearing protection does not take the sharp edge off the noise, or if your workers have ringing, pain, headaches or discomfort in the ears, your operation requires the advice of an expert.**

Workers should have their hearing tested at least every year, twice a year if they work in a high noise area.

Hearing Protection is required to be worn in the following manner:

Less than 80dB(A)	- No protection required
80dB(A) - 104dB(A)	- Class A protection - either muff or plug
105dB(A) - 110dB(A)	- Class A muff or plug with a reduction rating sufficient to reduce the dBA’s
More than 110dB(A)	- Class A muff or plug with a reduction rating sufficient to reduce the dBA’s

For more information, refer to:

- CSA Standard Hearing Protectors Z94.2 M1984

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

## Limb and Body Protection Info Sheet

### General Information

Due to the nature of the construction workplace and the number of different hazards, it is not possible to cover specialized limb and body protection in detail. These types of hazards are known as “job exposures” (exposure to fire, temperature extremes, body impacts, corrosives, molten metals, cuts from sharp or abrasive materials). PPE in the category would be items such as:

- Leg, arm, chin and belly guards
- Specialty hand pads and grips
- Leather aprons and leggings
- Full body suits
- Flame and chemical resistant clothing
- Various types of plastic boot covers, and oversize shoes

With all PPE, following the manufacturer’s instructions on its use, care and cleaning is critical and will help you get the full service life from your specialty PPE.

### Hand PPE (Gloves and Mitts)

PPE for the hands include: finger guards, thimbles and cots, hand pads, mitts, gloves, and barrier creams. Choose hand PPE that will protect against chemicals, scrapes, abrasions, heat and cold, punctures and electrical shocks.

### Types

PPE for the hands come in many forms, each designed to protect against certain hazards. Gloves most commonly used in the construction industry are made from leather, cotton, rubber, synthetic rubbers and other man-made materials, or combinations of materials.

Vinyl coated or leather gloves are good for providing protection while handling wood or metal objects. When you select hand PPE, keep the following in mind: look for anything at the job-site that may be hazardous to your hands. If gloves are to be used, select the proper type for the job to be done. Inspect and maintain hand PPE regularly. If in doubt about the selection or need for glove or hand PPE, consult your safety supplier or Safety Data Sheet (SDS).

### Usage

- At locations or during activities as identified by Atlantic Roofers Limited / North Shore Roofing Ltd.
- Leg protection must be worn while using a chain saw and must be cut resistant and CSA approved.

### Do

- ✓ Inspect hand PPE for defects before use
- ✓ Wash all chemicals and fluids off gloves before removing them
- ✓ Ensure gloves fit properly
- ✓ Follow manufacturer’s instructions on the care and use of the hand PPE you are using
- ✓ Ensure exposed skin is covered (no gap between the sleeve and the hand PPE)

### Don’t

- ✗ Wear gloves when working with moving machinery (gloves can get tangled or caught)
- ✗ Wear hand PPE with metal parts near electrical equipment
- ✗ Use gloves or hand protection that is worn out or defective
- ✗ Wear rings or loose dangling jewelry

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

## Respiratory Protection Info Sheet

### General Information

Respiratory protection falls into two major categories. The first is Air Purifying Respirators (APRs) that are particle (dust) chemical cartridges, but NO visor plate. The second category is Atmosphere Supply Respirators, including self-contained breathing apparatus (SCBA), airline systems and protective suits that completely enclose the worker and incorporate a life support system.

Only APRs will be dealt with here. The second category of respirators requires much more specific information and training. If you need to use Atmosphere Supplying Respirators, you should get expert advice.

### APRs

There are two basic types of APRs:

- Disposable fibre type with or without charcoal or chemical filter “buttons” and
- the reusable rubber face mask type with disposable or rechargeable cartridges

The choice depends on your job, labour, cost, and your maintenance facility.

**It is important to remember that APRs are limited to areas where there is enough oxygen to support life. APRs don’t make or supply oxygen.**

The type of APR, wearer breathing demand, and the concentration of airborne contaminants affect the service life. When an APR is required, consult the Safety Data Sheets (SDS) or supplier for the exact specifications for the APR.

**Facial hair can prevent a good seal and fit of an APR: One to three day’s growth is the worst.** Follow the manufacturer’s instructions to the letter regarding the mask, filters, cartridges and other components. Workers that must use respiratory protection should be clean-shaven.

**An APR is only as good as its seal and its ability to filter out the contaminants it was designed to filter.**

### Combination Respirators

This type of APR combines separate chemical and mechanical filters. This allows the change of the different filters when one of them becomes plugged or exhausted before the other filter (usually the dust filter plugs up before the chemical filter). **This type of respirator is suitable for most spray painting and welding.**

For more information check the:

- Safety Data Sheets (SDS),
- Local WHSCC, or
- Safety equipment supplier

### Do

- ✓ Train workers very carefully in the APR’s use, care and limitations
- ✓ Ensure that respirators are properly cleaned and disinfected after each shift, according the manufacturer’s instructions
- ✓ Dispose of exhausted cartridges and masks in sealed bags or containers
- ✓ Keep new, unused filters separate from old, used filters
- ✓ Monitor APR use; they are useless just hung around the neck
- ✓ Replace filters when breathing becomes difficult

### Don’t

- ✗ Use for protection against materials which are toxic in small amounts
- ✗ Use materials that are highly irritating to the eyes
- ✗ Use with gases that can’t be detected by odor or throat irritation
- ✗ Use with gases not effectively halted by chemical cartridges regardless of concentration (read the cartridge label)
- ✗ Use respirators or masks if the serviceability is in doubt
- ✗ Us APRs where oxygen content in the air is less that 18% or 18 kilopascals (partial pressure or greater)

These guidelines are not intended to conflict with or supersede the Provincial Occupational Health and Safety Act or Regulations made pursuant to the Act. Reference to such specific provisions should be made by the user.

# Maintenance

---

## Section 7

# Maintenance Policy

---

## Section 7.1

## **7.1 Maintenance Policy**

### **Purpose**

Personal Protective Equipment (PPE) if used correctly will protect the worker from hazards they are exposed to on the worksite. Administration and engineering controls will be the primary methods used to control workers from injury and PPE will provide the additional degree of protection. All employees, contractors, suppliers and visitors must comply with the PPE policy, as required.

### **Policy**

Atlantic Roofers Limited/North Shore Roofing Ltd. is committed to reducing the risk of injury to employees and damage to property. The preventative maintenance program will ensure that all tools and equipment are properly maintained by the following requirements:

### **Inventory**

An inventory of all equipment requiring maintenance will be compiled and maintained by management.

### **Informal Daily Maintenance Checks**

Supervisors and workers shall check tools prior to use and defective tools will be immediately taken out of service. No person shall remove or render ineffective a safeguard for a piece of equipment or tool unless the removal is necessary to enable the cleaning, maintenance, or repair of the equipment/tool. Where the person removes or renders ineffective a safeguard that person shall ensure the safeguard is replaced and is functioning properly before leaving the equipment/tool or that the equipment/tool is in a zero-energy state. Removal, tampering or otherwise making ineffective any equipment/tool safeguard is prohibited.

### **Daily Pre-Use Inspections**

Operators of equipment/machinery (i.e. forklifts, kettles, hoists, cranes, etc.) will conduct pre-use inspections on a daily basis. Completed daily inspection forms are to be reviewed by the supervisor so that timely completion of identified work can be arranged.

### **Emergency Equipment**

The routine inspection and testing of the emergency electrical supply, emergency lights, alarm system, voice communication system, exit lights, sprinkler systems, fire extinguishers, and fire doors is performed on an annual basis.

### **Housekeeping**

Maintaining workshops and job sites in a neat manner reduces the risk of personal injury and mishaps. All employees will ensure an effort is made to keep workstations as organized and neat as practical in performing their job.

### **Records and Statistics**

The maintenance of records and statistics in support of the maintenance program will be the overall responsibility of management.

### Requirement to Remove Equipment from Service

On a daily basis, all employees are responsible for ensuring their tools, equipment and machinery are in safe working order. A piece of equipment, machinery, or tool that is not in a safe working condition or is not serviceable must be removed from use and tagged “OUT of SERVICE”. The piece of equipment, machinery, or tool will then be turned in for repair through the supervisor or to the maintenance facility. Once the equipment, machinery or tool is ready for production, it will be returned with an “IN SERVICE” tag.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Training and Communications

---

## Section 8

# Training and Communication Policy

---

Section 8.1

## **8.1 Training and Communication Policy**

### **Purpose**

Safety Training and Participation in Safety meetings by all levels of employees in the Company is vital to the success of the Health & Safety Program and Loss Control. Safety training and meetings serve three (3) purposes and are a means of:

1. Providing a vehicle to keep Company employees, at all levels, current with Occupational Health and Safety requirements.
2. Encouraging participation in Health & Safety through an exchange of communication, ideas and experience.
3. Achieving a standard of Due Diligence by ensuring all reasonable measures are taken to protect and inform workers of potential hazards and the necessary accident prevention measures.

### **Policy**

Atlantic Roofers Limited/North Shore Roofing Ltd. is committed to providing all employees with the current Occupational Health and Safety information required to perform their assignments in the safest possible manner. The Occupational Health and Safety Act, Regulations and Atlantic Roofers Limited/North Shore Roofing Ltd. Health and Safety policy requires that employees, and managers/supervisors receive information and training regarding their duties under the policy and the Act, including JOHSC/Representative training, hazard reporting and control, safe work practices, job procedures and the health and safety program.

### **New Employee Safety Orientation**

All employees must attend an orientation session designed to introduce the health and safety program. The orientation will be conducted prior to beginning work. Managers or their designate are responsible to ensure orientations are provided to new employees using S-08-1 Employee Safety Orientation. The Employee Safety Orientation Form (S-08-1) will be completed and signed by management and the employee. A copy of the signed checklist will be retained on file by management.

### **WHMIS Training**

All Atlantic Roofers Limited/North Shore Roofing Ltd. employees working with, or in close proximity to hazardous materials must be trained in the Workplace Hazardous Materials Information System (WHMIS) upon start of employment with a review annually.

### **Specialized Safety Training**

Any training required under the OH&S Act and Regulations will be provided by a competent trainer or an accredited training organization. Where appropriate, employees must receive other training required under the OH&S Act including, First Aid, Fire Extinguisher, Fall Protection, Confined Space, etc.

### **Refresher/ Upgrade Training**

To be in compliance with the OH&S Act and Regulations and company policies, employees may be required to participate in refresher / upgrade training programs.

### **Management/Supervisor Training**

Any training required for management and supervisory personnel will be provided by a competent trainer or an accredited organization. Training suggested for management/supervisors include, but are not limited to Due Diligence, the Occupational Health and Safety Act, Accident Investigation, JOHS Committee, Hazard Identification, Workplace Inspections, etc.

### **JOHSC/Representative Training**

Training for JOHS Committee members to help fulfill their role on this very important committee will be outlined in the Terms of Reference.

### **Working Visitors**

For persons entering our project site for the purpose of collecting data, inspecting or completing a task must have a Visitor Orientation.

## Occupational Health and Safety Meetings

Atlantic Roofers Limited/North Shore Roofing Ltd. will communicate occupational health and safety information, employee concerns and recommendations through the following meetings:

### 1. Toolbox Meetings

Toolbox Meetings are an important part of our health and safety program and must be attended by all employees. Toolbox meetings can be used to promote safety, identify hazards, review rules and discuss safe work practices/job procedures.

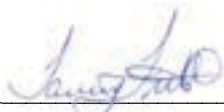

While on job sites that last more than one week, each Supervisor must conduct at least one safety meeting each week with their assigned crews and record minutes and attendance to the meeting. The first Toolbox meeting of the project will be a review of the jobsite hazard assessment. Crewmembers must sign their own name to the meeting minutes. All fixed locations will hold a safety meeting at least bi-annually.

### 2. Joint Occupational Health and Safety Committee Meetings (JOHSC)

JOHSC meetings must be conducted to discuss and resolve health and safety issues. Minutes and attendance must be recorded and minutes must be posted at the worksite/branch office. Those employees unable to attend any JOHSC meeting will receive a copy of those minutes for their review and comments. A site-specific Terms of Reference must be developed for each division. This Terms of Reference identifies all requiring aspects of the JOHSC (i.e. legal quorum, agenda, etc).

Atlantic Roofers Limited/North Shore Roofing Ltd. will keep records of all training and meeting with achievement level and dates if appropriate. For record keeping purposes, each division/branch is required to keep a training database with the name of the employee, required training, completion date, and expiry date of training. Copies of safety training records will be kept in the employee's personnel file.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Inspections

---

## Section 9

# Inspection Policy

---

## Section 9.1

## **9.1 Inspection Policy**

### **Purpose**

The purpose of this policy is to control losses of human and material resources by identifying and correcting unsafe acts and conditions, ensuring that existing controls are functioning adequately and, when appropriate, recommending corrective actions.

### **Policy**

Atlantic Roofers Limited/North Shore Roofing Ltd. is committed to maintaining a comprehensive inspection program that will include all of its facilities and project locations. Inspections will consist of the following components:

#### **Field Level Hazard Assessments**

Regular Field Level Hazard Assessments must be conducted by each supervisor/foreman on their work areas and document the results on the Daily Field Level Hazard Assessment Form. Upon notice of conditions that require attention, the supervisor is responsible to ensure prompt corrective action, and communicate risks and results to all workers.

#### **Pre-Use Equipment Inspections**

Pre-use equipment inspections must be completed by each operator on their work areas and document the results on specific assessment forms. Upon notice of conditions that require attention, the operator must communicate any defects or non-compliant issues to the supervisor, tag the equipment and take it out of service. The supervisor is responsible to ensure prompt corrective action and communicate risks and results to all workers.

The frequency of the pre-use equipment inspections will be determined by the Provincial regulations, and be reflected on the inspection documents, and communicated to all workers and supervisors.

#### **Monthly JOHSC/Representative Inspections**

At a minimum, formal inspections shall be conducted by the JOHSC/Representative on a monthly basis using the Workplace Inspection Form. The completed form will be forwarded to the OHS Coordinator for review and follow-up.

#### **Job Site Safety Audits**

The Safety Coordinator will conduct regular jobsite inspections through the year, to verify the OHS Program is functioning as intended. The results of every audit will be shared with workers, supervisors, and management. Management and Foreman will be responsible for all audit follow-ups that arise from audit findings.

#### **Management Inspections**

Management personnel will conduct their own inspections on a random basis. These inspections may include job sites, offices, shops, or warehouses. These inspections will be walk through type inspections. Management shall provide support to supervisors by acquiring equipment as is necessary to ensure safety at the worksites.

#### **Monitoring**

The supervisor will monitor progress on corrective actions by reviewing the inspection at their regular toolbox meetings. Branch Managers are responsible for ensuring that the inspection program is maintained and carried out in accordance with this Inspection Policy.

Inspections	Frequency
Field Level Hazard Assessments	Daily
Pre-use Equipment Inspections	Daily (If equipment is in use)
Warehouse/Office Inspections	Monthly
Job Site Safety Audits	On going
Management Inspections	Minimum 1 inspection per project
Monitoring	On going

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Procedures for Planned Inspections

---

Section 9.2

**General**

During an inspection, activities and conditions in the workplace are carefully examined to measure compliance with company rules, policies, procedures and legislation. Situations that have the potential to cause injury or damage (sometimes called unsafe acts and conditions) are identified and corrective action is initiated.

<b>Hazards Present</b>		
<ul style="list-style-type: none"> <li>● Inhalation of Fumes</li> <li>● Burns</li> </ul>	<ul style="list-style-type: none"> <li>● Slips/Trips</li> <li>● Cuts/Bruises</li> </ul>	<ul style="list-style-type: none"> <li>● Falls</li> </ul>
<b>Protective Mechanisms</b>		
<ul style="list-style-type: none"> <li>● PPE</li> </ul>	<ul style="list-style-type: none"> <li>● WHMIS Training</li> </ul>	<ul style="list-style-type: none"> <li>● Fall Protection Training</li> </ul>
<b>Equipment / Tools Required</b>		
<ul style="list-style-type: none"> <li>● Inspection Form (paper/electronic)</li> <li>● Camera</li> </ul>	<ul style="list-style-type: none"> <li>● Pen/Clipboard</li> <li>● Small Flashlight</li> </ul>	<ul style="list-style-type: none"> <li>● Previous Inspection Report</li> <li>● Bottled Drinking Water</li> </ul>

<p><b>Do</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO check toxic hazards of all solvents (SDS sheets available)</li> <li>● DO use appropriate respiratory protection</li> <li>● DO ensure flammable solvents are stored in special storage containers</li> <li>● DO ensure manufacturers manuals are available</li> <li>● DO be prepared to answer questions</li> <li>● DO be polite</li> <li>● DO follow all site rules and regulations</li> </ul>	<p><b>Do not</b> <input checked="" type="checkbox"/></p> <ul style="list-style-type: none"> <li>● DO NOT place blame. The goal is to correct unsafe acts and conditions to work safe.</li> <li>● DO NOT assume, verify</li> <li>● DO NOT let your temper get the best of you</li> <li>● DO NOT have a confrontational attitude</li> <li>● DO NOT wait for a regulatory visit before addressing non-compliance</li> <li>● DO NOT manage the people, manage the problem</li> </ul>
---	--

<p><b>Procedure</b></p> <ol style="list-style-type: none"> <li>1. <b>Before you go</b> <ol style="list-style-type: none"> <li>a. Have forms and required items on hand.</li> <li>b. Bring the site contact phone number with you.</li> <li>c. Acquaint yourself with the general layout of the work area.</li> <li>d. Get and fit safety equipment that may be required.</li> <li>e. A camera is useful for later reference (small pocket camera or cell phone). Keep a written log of where and what you took a picture of.</li> <li>f. A small flashlight is useful for enclosed rooms and in between walls.</li> <li>g. A pocket tape measure can be a handy item.</li> </ol> </li> <li>2. <b>Upon arrival at job site</b> <ol style="list-style-type: none"> <li>a. Identify the inspection team.</li> <li>b. Review reports from previous inspection.</li> <li>c. Ensure you have all the necessary equipment and PPE to do the inspection.</li> </ol> </li> </ol>
---

**Procedure (con't)**

**3. Conducting the inspection**

- a. Proceed with the inspection tour.
- b. During the tour, get off the “beaten path”.
- c. Look over, under, around, behind, inside, etc.
- d. Take the time to observe the activities of all personnel.
- e. Take immediate corrective action where there is imminent danger.
- f. Record all unsafe acts and conditions.

**4. Completion of inspection**

- a. Rank the unsafe acts/conditions on a “worst case first basis”.
- b. Identify corrective action required for each unsafe act/condition.
- c. Assign a person responsible for each corrective action and a date for completion.
- d. Distribute copies of the inspection report to all employees at safety meetings.
- e. Maintain records for management review and considerations.

	Title: <b>Monthly Inspection</b>	
Occupational Health & Safety Program <span style="float: right;">Page 1 of 2</span>		

Floors and Walkways	Yes	No	N/A	Storage/Warehouse	Yes	No	N/A
Are the office and back shop areas accessible and clear of garbage and debris?				Are supplies and materials stored properly on shelves?			
Are all main traffic areas in the entire building clear and have at least 1 m (36 in.) wide of clearance?				Does your storage layout minimize lifting problems?			
Are doorways unobstructed and clear of materials or equipment?				Are trolleys or dollies available to move heavy items?			
Are carpets and tiles in good condition and free of damage?				Are floors around shelves clear of rubbish?			
Are wet floor signs readily available and in easily accessible locations throughout the store?				Are racks and shelves in good condition?			
Are floors clean and free of debris? Are Wet Floor signs used and available at all times?				Are all loose or packaged products on shelves or pallets and at least 6 inches off the floor? There is no exception			
If supplies or materials are stored on the floor, are they away from doors and aisles and stacked properly and very stable?				Can you freely move through the back shop to inspect? Please take into account that there will be exceptions when deliveries arrive, your answer should reflect your observations over the last month.			
Stairs, Ladders, and Platforms	Yes	No	N/A	Electrical	Yes	No	N/A
Are ladders safe and in good condition? They must meet a minimum CSA grade 1 or 2 level.				Is there clear access to electrical panels and switch gear?			
Are stair handrails fastened to the wall securely?				Are electrical cords secured?			
Are stairwells clear of materials and equipment?				Are proper plugs used?			
Are stairs and handrails in good condition?				Are plugs, sockets, and switches in good condition?			
Are ladders stored properly when not in use? Must be suspended off the floor, such as hooked on a wall.				Are ground fault circuit interrupters available, if required?			
Walls and Ceilings	Yes	No	N/A	Equipment and Machinery	Yes	No	N/A
Are pictures, signs and fixtures securely fastened to the wall/Ceiling?				Are equipment and machinery kept clean? Take into account in case the equipment is being used during your inspection.			
Are all fixtures attached and fastened correctly? Must be secure and not dangling.				Is the equipment regularly maintained?			
Lighting	Yes	No	N/A	Are operators properly trained on all equipment?			
Are lighting levels in work areas adequate?				Are start-stop switches clearly marked and in easy reach?			
Are all lights illuminated? If there are any lights not working, they must be replaced immediately.				Is machinery adequately guarded?			
Is task lighting provided in areas of low light or high glare?				Is there enough work space?			
Garbage	Yes	No	N/A	Are noise levels controlled?			
Are bins located at suitable points?				Do you have a lockout procedure in place?			
Are bins emptied regularly?

# Investigations

---

## Section 10

# Investigation Policy

---

Section 10.1

## 10.1 Investigation Policy

### Purpose

Investigations shall be conducted to determine the causes of incidents so that appropriate action can be taken to prevent recurrence. The role of incident investigation in a health and safety program is prevention. Therefore it is important to investigate not only the incidents which cause the incident, but also near misses because of their potential if the circumstances had only been slightly different..

### Definitions

#### Incident

An incident is any unplanned or unwanted event, which resulted in injury or damage to equipment, property, process, or environment.

#### Near Miss

A Near Miss is an undesired event, which in different circumstances could have resulted in harm to people, damage to property, and/or loss to a process.

#### Medical Aid

Medical Aid is considered to be treatment given by a medical doctor/nursing practitioner.

#### First Aid

Emergency care rendered to an injured or ill employee that conforms to the recommended practice of the St. John Ambulance Association/Red Cross or other organization recognized by Health Canada and that is provided by the department or an organization in respect of an injury or illness of an employee arising out of or in the course of employment.

#### Minor Injury

A Minor Injury is any occupational injury or disease for which first aid or medical treatment is provided and that excludes disabling injury.

#### Bodily Injury

Bodily Injury includes “unconsciousness, loss of a substantial amount of blood, fracture of a leg or arm, amputation of a leg, arm, hand or foot, burns to a major part of the body, loss of sight in an eye and any injury that place life in jeopardy.”

### Policy

Atlantic Roofers Limited/North Shore Roofing Ltd. will investigate any incident that could have resulted in injury or property damage and ALL incidents that do result in injury or property damage to determine the cause and corrective actions that are required to prevent any recurrence. Investigation team members are provided training on investigation techniques. Members of the incident investigation team shall be qualified and competent individuals.

## **Responsibilities**

### **Management**

1. Ensures that incidents are investigated to determine cause
2. Ensures appropriate measures are implemented to prevent recurrence

### **Supervisor**

1. Take action immediately upon report of an incident
2. Ensure all incidents are investigated by all those involved (including subcontractors)
3. Conduct follow-up to ensure any recommendation(s) has been implemented

### **Workers**

1. Report any and all incidents to their immediate supervisor. If immediate supervisor is unavailable, the employee should report it to the JOHSC or Safety Representative
2. Cooperate in the completion of the incident investigation form
3. Cooperate in the investigation of the incident and establishment of corrective actions

### **JOHSC/Representative**

1. Investigate as per its Terms of Reference
2. Review incident reports
3. Make recommendations for corrective actions

## **Incident Investigation Process**

### **Supervisor Responsibility**

1. Report incident to management and safety coordinator immediately
2. Supervisors to investigate all incidents as soon as they happen
3. Written report to be submitted to JOHSC/Representative within 24 hours
4. Written report to be forwarded to management within 48 hours

### **Supervisor Responsibility**

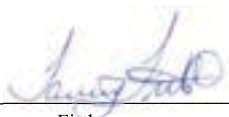

1. Provide or pay the cost of immediate transportation from the injury site to a medical treatment facility.
2. Report the injury to WorkSafeNB:
  - a. Immediately, if the accident results in or may result in a fatality, loss of limb, occupational disease.
  - b. Within 24 hours of occurrence, in the case of an accidental explosion or an accidental exposure to a biological, chemical or physical agent at a workplace.
3. Immediate notification can be made by  
NB fax: 1-888-629-4722, or tel: 1-800-222-9775  
NS fax: 1-902-491 8001, or tel: 1-902-491-8999  
PE fax: 1-902-368-5696, or tel: 1-902-368-5680  
NL fax: 1-800-276-5257, or tel: 1-800-563-9000
  - a. location
  - b. name of person injured, if any
  - c. employer name
  - d. contact person
  - e. brief description of the event
4. See form S-10-1 for additional reporting requirements

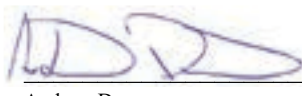

## Investigation Technique

1. Secure the scene
2. Provide care to the injured
3. Secure the area with red tape to prevent other workers from disturbing the incident scene
4. Determine what happened
5. Interview witnesses
6. Collect and safeguard any physical evidence
7. Obtain other evidence such as – photographs, diagrams, and statements
8. Determine what corrective action will prevent recurrence
9. Complete Incident Investigation Report the same day
10. Follow-up – ensure control measures have been put in place and are effective

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# When an Accident Happens

---

Section 10.2

## 10.2 When an Accident Happens

### What Workers Must Do

- Report the accident to Atlantic Roofers as soon as possible and in accordance with the workplace procedure set out by Atlantic Roofers for the reporting of accidents.
- If you have sought medical attention and/or have missed time from work due to the injury, you can apply for compensation benefits by:
  - NB – Completing Form 67, Report of Accident or Occupational Disease.
    - Form 67 is available at : [www.worksafenb.ca](http://www.worksafenb.ca) Under Forms
  - NS – Your Case Worker will send you the relevant forms to complete.
    - The Claims process can be found at: [www.wcb.ns.ca](http://www.wcb.ns.ca) Under Claims Process
  - PEI – Your Case Worker will send you the relevant forms to complete
    - The Claims Process can be found at: [www.wcb.pe.ca](http://www.wcb.pe.ca) Under Workers
  - NL – Completing Injury Report – Worker’s (6) and submitting it along with any physician’s reports
    - Injury Report – Work’s (6) can be found under: [www.workplacnl.ca](http://www.workplacnl.ca) Under Submitting a new Claim
- Atlantic Roofers will assist in the completing of all forms

### What Atlantic Roofers Must Do

- First step is to establish a workplace procedure informing workers of their requirement to notify you of any accident before leaving the place of employment.
- If an accident happens, you must:
  - Provide first aid
  - Maintain a logbook of all injuries requiring first aid treatment
  - When medical attention beyond first aid is needed, ensure that the emergency transportation procedure is followed.
- Immediately Call the following numbers to report:
  - NB - 1-800-229-9775
  - NS - 1-800-952-2687
  - PEI - 902-628-7513
  - NL - 1-800-563-5471
    - Any accidental explosion or exposure to a biological, chemical, or physical agent, whether or not a person is injured
    - Any catastrophic event or equipment failure that results, or could have resulted in any injury
    - Worker admission to a hospital facility as an in patient
    - A loss of consciousness
    - Burnes requiring medical attention beyond first aid treatment
    - Fractures (other than to fingers or toes)
    - Loss of vision in one or both eyes
    - Deep lacerations requiring medical attention beyond first aid treatment
    - Amputations
    - Fatalities
- If the worker has sought medical attention and/or has missed time from work, **you must complete all** necessary forms and submit within **2 days** to required Workers compensation boards.

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>F-10-1</b>
Occupational Health & Safety Program	Title: <b>Incident Report</b>	
		Page 1 of 1

Incidents can be anything from a first aid incident to a serious injury, violence, theft, or a heated discussion with an upset client or co-worker. An incident can also be a potentially hazardous situation. For example, power cords are stretched across an area and not removed while employees go to lunch. Nothing has happened yet but a concerned employee/foreman just wants to bring this to the organization's attention to prevent an accident from happening.

An incident report should be done as soon as possible, as details of an incident slip fast and key contact information of witnesses can be difficult to access later. The incident report can be a very useful tool for follow-up and is key in case of more serious incidents, especially when injury or damage has occurred. We encourage you to submit all incident reports no matter how minor to ensure safety and good working relations

## Section 11.1

## 11.1 Environmental Policy

### Purpose

This Environmental Policy is designed to guide all employees in pursuing their shared responsibility with the company to protect ourselves, the environment, and comply with environmental acts and regulations in all company related work.

### Policy

The environment is all external conditions and factors, living and nonliving (chemical and energy), that affect an organism or other specified system during its lifetime. The combination of all the social, technological, biological, physical, and chemical elements that compose the surroundings of man is known as the total environment.

Atlantic Roofers Limited/North Shore Roofing Ltd. is committed to protecting human health and the environment through regulatory compliance and the continuous review of our construction operations. We intend to meet this commitment through the application of the following principles.

### Responsibilities

#### Atlantic Roofers Limited/North Shore Roofing Ltd.

1. Continuous evaluation of our construction activities to provide environmental protection in keeping with the highest standards of our industry classification. This shall be a component of all facility/operational hazard assessments.
2. Ensure that all work will be done in an environmentally friendly manner to avoid any harm to the environment.
3. Providing instruction and information to employees as required ensuring an effective communication and reporting system.
4. Selection, use and disposal of materials shall meet the best practices of our industry classification in accordance with the Environment Act and regulations.

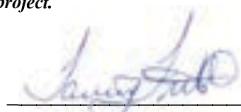

### Supervisors

1. Ensure that all work will be done in an environmentally friendly manner to avoid any harm to the environment.
2. Minimization of health hazards to employees and public through appropriate measures implemented to eliminate or control hazardous exposures.
3. Assessment of all potential environmental risks associated with all construction activities to be conducted prior to the commencement of work. This shall be a component of all jobsite hazard assessments.

### Employees

1. 1. Work and act in an environmentally responsible way when carrying out work for Atlantic Roofers Limited/North Shore Roofing Ltd.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Provincial Environmental Spill Containment Procedures

---

Section 11.2

<b>Atlantic Roofers Limited</b> <b>North Shore Roofing Ltd</b>	Date of last Revision: February 2024	Document No. <div style="text-align: right; font-size: 1.2em;"><b>ERP-11-1</b></div>
Occupational Health & Safety Program	Title: <b>Environmental Spill Containment</b>	

The purpose of this procedure is to outline the steps for containment and cleanup of a minor release (leak or spill) that could have an adverse effect on both our employees and the environment.

### **Containment Procedure**

1. Upon discovery of a release, the first employee at the scene shall survey the situation and determine if it is safe to respond.
2. If there is a risk of fire or explosion ( e.g.: the material is flammable or combustible):
  - a. Evacuate persons from the immediate area and call 911
  - b. Remove all sources of ignition
  - c. Ventilate the area
3. If it is safe to continue, wearing personal protective equipment, identify the type and amount and type of material involved (e.g.: 10 litres of liquid adhesive, 15 litres of fuel oil, etc.)
4. If the spill is small, within the control of the first employee at the scene and it is safe to do so:
  - a. Wear the appropriate personal protective equipment (i.e. gloves, goggles, respirators etc.) based on Safety Data Sheet (SDS) requirements.
  - b. Ensure the area is well ventilated and stay upwind of the spill area.
  - c. Stop the flow of the spill or leak by shutting a tap/valve or up-righting the leaking container.
  - d. Notify the Foreman/Supervisor who will direct the clean-up of the release in accordance with the SDS protocols.
5. If the spill is beyond the control of the first employee at the scene, immediately:
  - a. Call the Foreman/Supervisor to action the Spill Response Team.
  - b. Isolate the area, do not allow anyone not involved in emergency response to enter the area.
6. The Spill Response Team will first survey the scene and assess if they can safely control and contain the release.
7. If control or clean-up of the release is beyond the limits of the equipment or capability of the Spill Response Team, **call 911** and notify the Foreman/Supervisor.
8. If the release can be safely managed by the Spill Response Team:
  - a. Wear the appropriate personal protective equipment (i.e., gloves, goggles, respirators etc.) based on SDS requirements.
  - b. Ensure the area is well ventilated and stay upwind of the spill area.
  - c. Stop the flow of the spill or leak by shutting a tap/valve or up-righting the leaking container.
  - d. Attempt to contain the release by placing absorbent socks around spilled material and prevent material from travelling into any drains, storm or sanitary sewers.
  - e. Use absorbent packs or materials (oil dry/peat moss) to soak up any standing material. Use a scoop or pail to draw up any pooling liquids.
  - f. Place material being soaked/cleaned up into a drum/container. Include any impacted soil, other material or contaminated clothing with the material that is being removed.
  - g. Secure and label all drums/containers holding contaminated materials and dispose of at an approved site
9. Should a spill result in any negative physical effect on an employee:
  - a. Consult the SDS for proper first aid procedures and implement.
  - b. Arrange for medical assistance/aid as required.
  - c. Complete required New Brunswick Worksafe reports.

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: February 2024	Document No. <b>ERP-11-1</b>
Occupational Health & Safety Program	Title: <b>Environmental Spill Containment</b>	

**Reporting Procedure**

1. The Spill Response Team Leader will document the release details on the Environmental Incident Report Form (P-11-1).
2. The Foreman/Supervisor will notify the Branch Manager responsible for the job and report details of the incident, within 6 hours of the release.
  - a. Fredericton NB - Office: 1-506-459-1717 / Mobile: 1-506-444-1844
  - b. Saint John NB - Office: 1-506-635-7663 / Mobile: 1-506-654-6533
  - c. Dartmouth NS - Office: 1-902-445-5044 / Mobile: 1-902-221-2752
  - d. Winsloe PE - Office: 1-902-368-1011 / Mobile: 1-902-629-4872
  - e. Mount Pearl NL - Office: 1-709-747-4333 / Mobile: 1-709-690-8496
  - f. Moncton NB – Office: 1-506-576-6683 / Mobile: 1-506-875-5666

3. The Branch Manager will report the release to the appropriate Provincial Department of Environment. All releases, regardless of their size must be reported.

During regular operating hours call the appropriate Regional Office of the Provincial Department of Environment, to report the release.

- |                                    |   |
|------------------------------------|---|
| ■ Bathurst NB      506-547-2092    | ■ NS General Contact      1-877-936-8476      |
| ■ Miramichi NB      506-778-6032   | ■ Prince Edward Island      1-902-368-5000    |
| ■ Moncton NB      506-856-2374     | ■ Newfoundland & Labrador      1-709-772-2083 |

| ■ Fredericton NB      506-444-5149 |   |
| ■ Grand falls NB      506-473-7744 |   |

After normal business hours and on weekends, contact the Canadian Coast Guard at 1-800-565-1633, to report the release.

4. The Branch Manager will report the release to Goguen Champlain Insurance if the response to the release required activation of the Atlantic Roofers’ Spill Response Team.
  - Goguen Champlain Insurance - 506-862-2070
5. The Branch Manager will contact Goguen Champlain Insurance and the Stantec Site Professional, if the response to the release required resources beyond the Atlantic Roofers’ Spill Response Team or if directed by the Insurer or the Department of Environment, or if there is any uncertainty regarding spill clean-up and compliance with Environmental Standards.
 

■ Stantec Consulting Ltd. NB - 506-857-8607	■ Stantec Consulting Ltd. PE - 902-566-2866
■ Stantec Consulting Ltd. NS - 902-468-7777	■ Stantec Consulting Ltd. NL - 709-576-1458

**Follow-up**

The Branch Manager will ensure that all releases are discussed in the Joint Health and Safety Committee meetings.

# Emergency Preparedness

---

## Section 12

# Emergency Preparedness Policy

---

Section 12.1

## **12.1 Emergency Preparedness Policy**

### **Purpose**

To, wherever possible, Protect life and property, Ensure appropriate communication with internal and external parties, Alleviate human suffering and hardship, Maintain and restore essential facilities and services and Ensure continuity of operations.

### **Policy**

The risk of an accident cannot be totally eliminated; therefore Atlantic Roofers Limited/North Shore Roofing Ltd. will make every reasonable effort to ensure that each employee is trained and prepared in the event of an emergency.

### **Responsibilities**

#### **Management**

1. Provide initial emergency first aid training and refresher training, ensuring the appropriate number of first aid trained individuals at each workplace at all times.
2. Ensure first aid trained personnel are known or their names posted.
3. Provide transportation to a medical facility for injured persons.
4. Provide communications in the form of cellular phones or radios.
5. Provide appropriate first aid kits and ensure that records are kept.

#### **Supervisors**

1. Ensure that each first aid trained employee is known to every Atlantic Roofers Limited/North Shore Roofing Ltd. employee.
2. Provide first aid to and other emergency services to employees of Atlantic Roofers Limited/North Shore Roofing Ltd., where properly trained to do so.
3. Ensure that proper site orientation is completed and that each employee knows where to find first aid, where the first aid kit is and where the muster station is located.
4. Cooperate with emergency personnel.

#### **Employees**

1. Provide first aid and other emergency assistance where properly trained to do so.
2. Cooperate with and follow the instructions of emergency personnel and your supervisor.
3. Participate and cooperate in the Emergency Response Plan drill practice.

#### **JOHSC/Representative**

1. Review Emergency Response Plan on an annual basis and make recommendations as required.

## Public and Employee Relations

Atlantic Roofers Limited/North Shore Roofing Ltd. understands the importance of developing and maintaining processes that keep the public and employees informed of important developments and newsworthy items regarding all types of emergencies within the Company.

Depending on the severity of the emergency, Atlantic Roofers Limited/North Shore Roofing Ltd. will use the following process:

1. Atlantic Roofers Limited/North Shore Roofing Ltd. will prepare a preliminary public report, which will be approved by the President prior to being released.
2. Arrangements will be made with a management representative for notification to next of kin in the event of critical injury or fatality to an employee.
3. Atlantic Roofers Limited/North Shore Roofing Ltd. will maintain a positive and cooperative relationship between Company Personnel, Subcontractors, the Public, and the Media.

## Drills

Drills are required to exercise and maintain the efficiency of personnel in the site-specific rescue and lifesaving techniques. Drills will be conducted on an annual basis, and only when they do not jeopardize the safety of personnel.

Each drill will be documented on a drill report form and assessed by management and corrective actions will be taken when deficiencies are noted. Drill scenarios will vary to provide all personnel the opportunity to utilize all equipment and options, and to ensure they are familiar with all established procedures.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>ERP-12-1</b>
	Title: <b>Emergency Response Plan - Fire</b>	
Occupational Health & Safety Program <span style="float: right;">Page 1 of 1</span>		

All facility personnel must become familiar with the appropriate Emergency Response Plans for all Departments prior to entering. Visitors to the facility must be instructed on facility Emergency procedures or remain under the direction of ARL personnel familiar with the ERP. The emergency response plan procedures in the event of Fire are as follows:

- 1. In case of a fire, warn others: SHOUT FIRE – FIRE – FIRE  
OR if the Fire Alarm Siren Sounds:**
  
- 2. Telephone 911**  
Give your Name, Telephone Number, Location and Nature of the Fire or Major Incident (ie; Explosion, Building Collapse, Gas Leak) to the Operator.
  
- 3. Evacuate the area!**
  1. All personnel should evacuate the work area as a group.
  2. Provide assistance to others, if necessary and if you can do so without increasing the danger to yourself and others.
  3. Ensure you close all doors and windows as you exit.
  
- 4. See Floor Plan for Location of Nearest Extinguisher.**
  1. If comfortable, attempt to extinguish a small fire.
  2. If the fire is/could be out of control, leave the area immediately.
  3. Know the location of the nearest Fire Extinguisher.
  
- 5. Meet at Muster Point**
  1. Evacuate through the nearest safe Emergency Exit.
  2. Move promptly to the general parking area.
  3. Gather at \_\_\_\_\_ where you will be met by the designated Emergency Warden.
  4. The designated Emergency Warden shall be \_\_\_\_\_. (if designate is away from the facility he/she will designate, in advance, a person to act in his/her stead)
  5. You should be at the Muster Point within 2 minutes of exiting the building.
  
- 6. The Emergency Warden will:**
  1. Meet all assembled persons at the Muster Point.
  2. Account for all personnel
  3. Provide a status report to the Fire Department/EHS personnel upon their arrival of:
    - a. The location(s) of all personnel
    - b. The fire location
    - c. Any known hazards
  
- 7. DO NOT RE-ENTER** the building until the All Clear Signal has been given by the Emergency Warden or Emergency Response Personnel.
  
- 8. Report ANY use or problems** observed with the fire extinguishers to the Emergency Warden or the Safety Coordinator.
  
- 9. Fill out the appropriate “Incident Report” F-10-1 and “Investigation Report” F-10-2 if appropriate.  
(Must be submitted to Branch Office and Safety Coordinator within 24 hours)**

Occupational Health & Safety Program	Title: <b>Emergency Response Plan – Injury or Death</b>	
Page 1 of 1		

All facility personnel must become familiar with the appropriate Emergency Response Plans for all Departments prior to entering. Visitors to the facility must be instructed on facility Emergency procedures or remain under the direction of ARL personnel familiar with the ERP. The emergency response plan procedures in the event of Injury or Death are as follows:

1. **DO NOT** move seriously injured person(s) unless there is an immediate danger to the injured person’s life. **DO NOT** endanger your own life.  
**If there is any doubt as to the severity of the injury call 911 immediately and request Emergency Response Personnel**
  
2. **Telephone 911**
  1. **Location** of emergency (Give Address \_\_\_\_\_) and WHERE within the facility.
  2. **What happened to the injured person.** Describe what you saw or know.
  
3. **Call for “In-House” First Aid assistance.**
  1. See Emergency Contact list on Safety Bulletin Board for First Aiders names and contact phone numbers.
  
4. **The responding First Aider will become the First Responder for the injured person.**
  
5. **First Aid Kit Location:** \_\_\_\_\_
  
6. **Inform appropriate Provincial WorkSafe. Phone #:** \_\_\_\_\_
  
7. **Assign a person to meet and guide Emergency Vehicles/Personnel when they arrive at the facility.**
  
8. **Nearest Emergency Medical Facility is:** \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_
  
9. **Fill out the appropriate “Incident Report” F-10-1 and “Investigation Report” F-10-2 if appropriate. (Must be submitted to Branch Office and Safety Coordinator within 24 hours)**

_____	_____	_____
Safety Coordinator	Signature	Date (mm/dd/yyyy)

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>ERP-12-3</b>
Occupational Health & Safety Program	Title: <b>Emergency Response Plan – Transportation of Injured</b>	

This document outlines basic procedures to follow to ensure any injured/ill person at a company facility is taken care of as effectively and efficiently as possible.

**Injury** – An act that damages or hurts one’s body.

**Illness** – A disease, period of sickness or unhealthy condition affecting the body or mind.

- 1.** If an injury/illness is discovered, the first person on the scene is to contact an in house First Aider immediately. If the first person determines that the situation is an emergency, he/she is to call **911** then call the in house First Aider.
- 2. In all emergency circumstances:**
  1. The notified in house/on site First Aider will become the facility First Responder.
  2. The in house/on site First Aider/Responder will:
    - a. Provide emergency First Aid as required.
    - b. Will assess the need for emergency medical intervention and transportation to the nearest medical facility.
  3. In all situations the attending First Aider will be responsible for making the call as to what type of transportation is needed.
- 3. If the injured/ill person appears to need medical assistance but refuses to be transported by ambulance:**
  1. The person listed as the next of kin/emergency contact of the injured party will be contacted and the decision will rest with that person.
  2. An injured/ill person whose ability to drive is in doubt, will not be permitted to drive themselves.
  3. If, in the opinion of the in house First Aider, an ambulance is not required but is such that the person should be transported to a medical facility, the decision will rest with the First Aider in concert with the injured’s next of kin/emergency contact. Injured person will be accompanied by at least one first aid provider who is not the operator of the transportation.
 

**\* Reference to Provincial First Aid Regulations**  
 NB Regulation 2004-130, Section 6      NS Regulation Section 82, Section 12(1)(2)  
 NL Regulation 1148/96, Sections 11(5)(6)      PE Regulation Chapter O-1, Section 9
- 4. If the injured/ill person needs to be moved from an isolated site to another place for transfer to an ambulance, the transportation is by a means that:**
  1. Is suitable, considering the distance to be traveled and the types of serious injuries or illnesses that may occur.
  2. Provides for protection against the weather.
  3. Is large enough to accommodate a stretcher and a 1st aid person along with the driver.
- 5. Transportation Costs**
  1. Are incurred as a result of a work related injury/illness those transportation costs will be borne by Atlantic Roofers Limited.
  2. Are not related to a work injury/illness any costs of transportation will be borne by the injured/ill person.
  3. The injured/ill person is not an employee of Atlantic Roofers Limited, the cost of transportation will be borne by the injured/ill person.
- 6. Fill out the appropriate “Incident Report” F-10-1 and “Investigation Report” F-10-2 if appropriate. (Must be submitted to Branch Office and Safety Coordinator within 24 hours)**

_____	_____	_____
Safety Coordinator	Signature	Date (mm/dd/yyyy)

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>ERP-12-4</b>
Occupational Health & Safety Program	Title: <b>Post Emergency Process</b>	
Page 1 of 1		

**Termination of the Emergency Situation** is the portion of incident management in which all Management, Subcontractors, and Employees who were involved will document safety procedures, site operations, hazards faced and lessons from the incident. Termination is divided into four phases: Debriefing, Post-incident analysis, Reports and Subsequent Documentation and Clean-up Procedures.

- 1. Debriefing** is the process of reviewing the Emergency Situation and focusing on the following factors:
  1. Discussion of any potential hazardous exposures.
  2. Identifying equipment/material damage and any unsafe conditions.
  3. Assigning information-gathering responsibilities.
  4. Summarizing the activities performed.

Information provided during the debriefing will be placed into the investigation report and provided to Management.

**2. Analysis / Investigation**

During the investigation, the incident will be reconstructed to establish a clear picture of the events that took place during the incident. The post-incident analysis will focus on five key topics:

1. Causes, direct and indirect.
2. Command and control techniques
3. Tactical operations
4. Resources
5. Outside support services.

**3. Reports and Subsequent Documentation**

All reports and other incident documents will be consistent with the Local, Provincial and Federal requirements. The report will consist of the following:

1. The Investigation Report
2. Physical Evidence, Statements, Photographs; and

The Emergency Incident Report will be provided to management of Atlantic Roofers Limited/North Shore Roofing Ltd. and Federal or Provincial Authorities.

**4. Clean-up Procedure**

Atlantic Roofers Limited/North Shore Roofing Ltd. will provide a team to perform salvage and recovery clean-up following the investigation procedures.

- 5. Fill out the appropriate “Incident Report” F-10-1 and “Investigation Report” F-10-2 if appropriate. (Must be submitted to Branch Office and Safety Coordinator within 24 hours)**

# Records and Statistics

---

## Section 13

# Records and Statistics Policy

---

## Section 13.1

## 13.1 Records and Statistics Policy

### Purpose

Records, reports and statistics serve the purpose of documenting a “live” and healthy health and safety program, and thus provide the means by which management and the JOHSC/Representative can monitor the effectiveness of the program. Records and statistics can demonstrate due diligence on the part of Atlantic Roofers Limited/North Shore Roofing Ltd. and can be used to identify trends and problems and to allow planning for program improvements.

### Policy

In accordance with the Occupational Health and Safety Act and the health and safety policy of Atlantic Roofers Limited/North Shore Roofing Ltd., management shall ensure records and statistics are maintained and preserved for a minimum period of five years.

To ensure that management and employees have the required information at hand when needed, all health and safety documentation will be maintained in a central filing system at each division.

The following records shall be maintained:

- JOHSC records – minutes, inspections, investigations, recommendations, etc
- Hazard Assessments
- Incident Reports and Investigations
- Workplace Inspections
- Training Records
- Inventory of Hazardous Materials
- First Aid Treatment Records
- New Employee Orientations
- Emergency Drills
- Government Inspection Reports
- Safety Violations and Resulting Discipline/Corrections
- Maintenance Records
- Minutes of Toolbox Meetings
- WCB Reports
- Emergency Drill Reports

Year-end safety reports and any other statistics required by the JOHSC/ Representative will be submitted by the deadline set by the committee.

Management will perform annual audits of the safety program for the continuous improvement of our program.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# HR Policies

---

## Section 14

# Cell Phone Policy

---

Section 14.1

## 14.1 Cell Phone Policy

### Purpose

This policy outlines the use of personal and company issued cell phone devices (this includes: smart phones -eg: I Phones; Android phones and personal digital assistants, Blackberry devices, etc.) while at work.

### Policy

While at work, employees of Atlantic Roofers Limited/North Shore Roofing Ltd. are to exercise discretion in using all cellular devices.

### Personal Calls/Texting

Personal calls/Texting during the workday can interfere with employee productivity and is a distraction both to the person receiving/sending the call or text and to others working in the area.

It is well documented in research studies that worker distraction is a major contributor to workplace accidents, further to this, research findings indicate that cell phone use/texting while working or driving is dangerous and may even approach the equivalent danger of performing while under the influence of drugs or alcohol.

The importing of explicit ,derogatory or offensive materials into the workplace via cell phones devices will not be tolerated by Atlantic Roofers Limited/North Shore Roofing Ltd. and will be enforced up to and including removing the individual importing this material from the workplace.

Atlantic Roofers Limited/North Shore Roofing Ltd. encourages a reasonable standard of limiting calls/text messages to break and lunch times when on shift and when not in control of a vehicle or equipment unless a hands free device is used to perform the call.

Employees are therefore asked to make all personal calls on non-work time and ensure family and friends are made aware of this policy. **Personal calls from family/friends should be directed through your local branch office switchboard, where the receptionist will redirect the call through to your foreman's cell phone.**

Flexibility will be provided to this policy in circumstances demanding immediate attention. (Emergencies only).

### Lost, Stolen or Damaged Personal devices

Atlantic Roofers Limited/North Shore Roofing Ltd. will not be responsible for lost, stolen or damaged personal cell phones brought into the workplace by employees.

### Use of Cellular Devices While Driving

Employees whose job responsibilities include regular or occasional driving and who are issued/using a cell phone for business use are expected to refrain from using their phone while driving. Safety must come before other concerns.

Employees are expected to pull off to the side of the road and safely stop the vehicle before accepting or placing a call.

If acceptance of a call is unavoidable, and pulling over is not an option, employees are expected to do all of the following:

1. Use hands free options as required by law.
2. Refrain from engaging in complicated or emotional discussions and always keep your eyes on the road.

In situations where job responsibilities include regular driving and accepting of business calls, hands-free equipment will be provided to facilitate the provisions of this policy.

## Use of Cellular Devices While Driving (con't)

Under no circumstances does Atlantic Roofers Limited/North Shore Roofing Ltd. expect or allow employees to place themselves or others at risk to fulfill their job duties or business needs.

**Employees who are charged with traffic violations resulting from the use of their cell phones while driving will be solely responsible for all liabilities that result from such actions.**

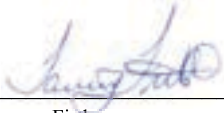

## Enforcement of Policy

The terms of this policy will be enforced under the direction of the Regional Branch Manager/Director and executed by Supervisors/Foremen as per Atlantic Roofers Limited/North Shore Roofing Ltd. Company Rules and Discipline Policy, in that, on observance of contravention of this policy the following enforcement measures will occur:

1. First offence a verbal warning will be issued by their immediate supervisor/Foreman.
2. Second offence a written warning will be issued.
3. Third offence will result in a suspension from work without pay and/or probable termination of employment.

As also stated in our Company Rules and Discipline Policy individuals will be dismissed without prior notice if their actions are deemed to pose an immediate risk to themselves, co-workers and/or Atlantic Roofers Limited/ North Shore Roofing Ltd.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Drug & Alcohol Policy

---

Section 14.2

## 14.2 Drug and Alcohol Policy

### Purpose

Atlantic Roofers Limited/North Shore Roofing Ltd is committed to being an industry leader in providing outstanding value to its customers, a safe and stimulating work environment for its employees, and superior returns for its shareholders. This policy is written to ensure we keep that commitment.

### Policy

Recognizing the potential negative effects of alcohol and drugs on the organization, in particular the hazards that those individuals who abuse alcohol and/or drugs pose to themselves, their co-workers, and the general public, Atlantic Roofers Limited/North Shore Roofing Ltd has implemented a drug and alcohol policy.

Drug and alcohol abuse is not acceptable in the workplace. Atlantic Roofers Limited/North Shore Roofing Ltd acknowledges its obligation to take all reasonable steps to ensure the health and safety of its workers.

This policy provides for the testing of employees for drug/alcohol abuse, assisting employees who voluntarily seek help for problems relating to alcohol and/or drugs (cannabis or any illegal drug), and educating employees on the dangers of drug and alcohol abuse.

The Drug and Alcohol Policy applies to all employees of Atlantic Roofers Limited/North Shore Roofing Ltd and may also extend to subcontractors.

For the purpose of this policy, the following are prohibited:

1. Being impaired by alcohol/drugs (cannabis or any illegal drug) while at work
2. The possession or use of any illicit drug or alcohol on Company premises, at Company worksites, or in Company vehicles.
3. The presence in the body of illicit drugs (or their metabolites) while at work
4. Refusal to submit to drug/alcohol testing, failure to report to a Company-designated facility for a drug/alcohol test, or tampering or attempting to tamper with a test sample.

### Disciplinary Action

Employees who violate the provisions of this policy are subject to disciplinary action up to and including termination of employment.

#### Work Rules Governing Drug/Alcohol Abuse

1. Employees are not to report to work or be at work if they are impaired by alcohol or drugs
2. An employee who is taking legal medication (whether or not prescribed by a physician) which may affect or impair judgment, co-ordination or perception so as to adversely affect their ability to perform work in a safe and productive manner, must notify their supervisor prior to commencing work. The supervisor will determine whether the employee will be permitted to work or whether work restrictions will be applied.
3. Employees who are not capable of competently and safely performing their job duties will not be permitted to work and will be required to leave the Company premises/job site.
4. When an employee, considered to be in an unfit condition, is required to leave Company premises, transportation to their residence will be arranged by the supervisor.

The Company reserves the right to temporarily remove, reassign or suspend an employee pending a determination of the employee's fitness for work, assessment of a drug/alcohol problem, or completion of an investigation into a possible violation of this policy.

**Drug and Alcohol Testing**

In the interest of safety and the objective of ensuring a work environment free of impairment by drug/alcohol, employees are required to submit to tests for drugs and/or alcohol for contractor request prior to starting a project or when there is just cause. Such tests may include but limited to: breath analysis, urinalysis, or any other test(s) considered appropriate.

Atlantic Roofers Limited/North Shore Roofing Ltd will not accept test results from any other facility other than one designated by the Company.

If there is reasonable cause to believe that an employee is in violation of this policy, Atlantic Roofers Limited/North Shore Roofing Ltd may require the employee to submit to alcohol/drug testing and/or physical testing of motor skills and reactions.

Reasonable cause shall mean observation of impaired motor skill proficiency, impaired judgment, or unusual conduct, or any reliable information provided to the Company of drug/alcohol consumption at work or an inappropriately short time prior to reporting to work.

Following an incident or near miss Atlantic Roofers Limited/North Shore Roofing Ltd may require those involved to undergo testing for drugs/alcohol.

**Responsibilities**

**Management**

1. Provide information on drug and alcohol abuse
2. Enforce this policy
3. Help those suffering from addiction, to find treatment

**Supervisor**

1. Do not allow a person under the influence to work
2. Immediately report drug and alcohol abuse
3. Follow confidentiality protocols

**Employees**

1. Do not work when under the influence
2. Report to supervisor, any use of drugs and/or alcohol that may be in your system while at work

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

Employee Name: _____	Weather Conditions: _____
Date of Incident (dd/mm/yyyy): _____	Time of Incident: _____ am/pm
Date of Investigation (dd/mm/yyyy): _____	Time of Investigation: _____ am/pm

**Step 1 - Review the requirements for Alcohol & Drug testing of employees involved in an incident.**

A supervisor of an employee MUST complete the Post Incident Testing Form as part of the Reasonable Grounds investigation for each employee involved in an accident, near miss, or incident. "Involvement" in an incident is not limited to injured parties.

The employee may be requested to submit to an alcohol and drug test based on the Reasonable Grounds investigation. The supervisor and the next level of management may determine that there are reasonable grounds to require or to waive A&D testing.

Note: This form is for use in Post Incident situations. For situations where A&D use is suspected outside of an incident, use the Reasonable Grounds Testing Form. (Form F-14-1)

**Step 2 - Determine if there are Grounds to Require or to Waive an A&D Test**

If the A&D testing requirement is being waived, please check YES or NO and explain the reason below.

- Yes     No    Act of God e.g. wind, weather
- Yes     No    Victim of another person's actions
- Yes     No    Clear mechanical breakdown
- Yes     No    Innocent bystander
- Yes     No    Victim of an operational upset
- Yes     No    Other: Specify \_\_\_\_\_

Please explain the reason A&D testing is being waived.

# Marijuana Policy

---

## Section 14.3

## 14.3 Medical Marijuana Policy

### Purpose

The purpose of this policy is to set up guidelines and expectations when it comes to using medical marijuana. Medical marijuana will be treated the same as all other regularly prescribed medication. Atlantic Roofers Limited/North Shore Roofing Ltd has the same expectations from employees who use medical marijuana as who use all other types of medication and will accommodate individuals up to the point of undue hardship.

### Guidelines

- Employees may only use medical marijuana with a license in their names from a physician.
- If an employee is required to use medical marijuana while at work, they must inform the Regional Manager. An employee is not required to disclose their specific medical diagnosis; however, they are required to provide a note from their doctor and a copy of the possession license.
- All information provided in regard to medical marijuana use is considered confidential and will be treated as such, keeping an employee's privacy as a top concern second only to safety.
- Employees who have a medical condition which requires additional accommodation can discuss their marijuana use schedule in context of the general accommodation plan with their Regional Manager and their primary care physicians.
- Employees may be required to work with the company's service provider who will provide direction and support for the use of medical marijuana.
- Atlantic Roofers Limited/North Shore Roofing Ltd will work with the individual that requests accommodation in an effort to ensure that the measures taken are both effective and mutually agreeable.
- In the event that medical marijuana is deemed to pose a significant or potential hazard to the employee and/or other employees, Atlantic Roofers Limited/North Shore Roofing Ltd will attempt to find alternative work for the employee, up to the point of undue hardship.

### Use of Medical Marijuana While at Work

- In the event that an employee is taking medical marijuana during regular working hours, they are expected to use it in moderation, only at the recommended level of dosage and the applicable frequency of the dose.
- Atlantic Roofers Limited/North Shore Roofing Ltd asks that, where possible, employees who require medical marijuana use a method of ingestion other than smoking
- Employees who choose to smoke medical marijuana must abide by all provincial smoking regulations
- Employees who choose to smoke medical marijuana are not permitted to smoke in the presence of other employees
- Atlantic Roofers Limited/North Shore Roofing Ltd will determine an appropriate smoking area for the employee, with the goal of maintaining the confidentiality of the employee's medical situation.

### Roles and Responsibilities

#### Management is required to:

- Treat employees who use medical marijuana the same as all other employees using prescription medication
- Provide accommodation up to the point of undue hardship.
- Be aware of the effects of marijuana use and ensure employees are not placed in any safety sensitive situations
- Assess the effects of the use of marijuana on an employee's performance on the job
- Ensure that any employee who asks for help due to a drug or alcohol dependency is provided with the appropriate support (including accommodation) and is not disciplined for doing so.

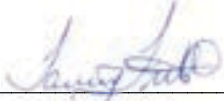

## Roles and Responsibilities (con't)

### Management is required to (con't):

- Respond to any employee who queries regarding the use of medical marijuana, while maintaining the privacy of an employee's specific situation at all times.

### Employees are required to:

- Disclose their medical marijuana use to management
- Work with Atlantic Roofers Limited/North Shore Roofing Ltd to develop accommodation plans that are mutually agreeable
- Follow the agreed-upon accommodation plan and the guidelines of this policy
- Never share their medication with any other employee, even those who may have a similar prescription
- Maintain ongoing communication with management regarding the effects of marijuana on their ability to perform their duties
- Never participate in activities which could cause a safety risk, such as driving while under the influence of marijuana.

## 14.3 Recreational Marijuana Policy

### Purpose

The purpose of this policy is to set up guidelines and expectations when it comes to using recreational marijuana. Marijuana will be treated the same as all other recreational substances. Atlantic Roofers Limited/North Shore Roofing Ltd has adopted this policy to communicate its expectations and guidelines surrounding marijuana use, misuse and abuse.

### Guidelines

Employees under the influence of drugs or alcohol on the job can pose serious health and safety risks both to themselves and their coworkers. To help ensure a safe and healthy workplace, Atlantic Roofers Limited/North Shore Roofing Ltd reserves the rights to prohibit certain items and substances from being brought onto, or present on company premises.

### Expectations

The following expectations apply to employees and managements alike while conducting work on behalf of the company, whether on or off company property:

- Employees are expected to arrive to work fit for duty and able to perform their duties safely. Employees must remain fit for duty for the duration of their shift
- Employees will be expected to not have smoked within 8 hours of starting their shift.
- Use, possession, distribution or sale of drugs or alcohol during work hours, including during paid and unpaid breaks, is strictly prohibited
- Employees are prohibited from reporting to work while under the influence of recreational marijuana and any other non-prescribed substances
- Employees on medically approved medication must communicate to management any potential risk, limitation, or restriction requiring modification of duties or temporary reassignment
- Employees are expected to abide by all governing legislation pertaining to the possession and use of marijuana.

### Roles and Responsibilities

Atlantic Roofers Limited/North Shore Roofing Ltd will clearly communicate all expectations surrounding marijuana use, misuse and abuse. To help enforce this policy, management and employees are expected to adhere to the following:

#### Management will:

- Identify any situations that may cause concern regarding an employee's ability to safely perform their job functions
- Ensure that any employee who asks for help due to a drug or alcohol dependency is provided with the appropriate support (including accommodation)
- Maintain confidentiality and employee privacy.

#### Employees must:

- Arrive for work fit for duty, and remain fit for duty throughout their shift
- Perform work safely in accordance with company established safe work practices
- Avoid the consumption, possession, sale or distribution of marijuana, other drugs or alcohol on company property, and during working hours even if off company property
- When off duty, refuse a request to come into work if unfit for duty
- Report limitations and required modifications as a result of medically approved marijuana use
- Report unfit coworkers to management

## Roles and Responsibilities (con't)

### Employees must (con't):

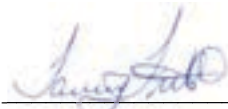

- Seek advise or appropriate treatment where required
- Communicate dependency or emerging dependency
- Abide by all governing legislation pertaining to the possession and use of marijuana

## Medical Marijuana

Where an employee uses medical marijuana, it is expected they provide a copy of their medical license to use marijuana to your Regional Manager at Atlantic Roofers Limited/North Shore Roofing Ltd.

## Disciplinary Action

Employees found in violation of this policy may be subjected to disciplinary action up to and including dismissal of employment. Where applicable, Atlantic Roofers Limited/North Shore Roofing Ltd will take legal action in accordance with the law.

# Ergonomic Policy

---

## Section 14.4

## 14.4 Ergonomic Policy

### Purpose

The purpose of an Ergonomic policy is to establish guidelines to ensure that all possible safeguards are taken to protect our employees from injuries by identifying risks associated with manual handling, posture and workstation layout in our work environment and moving to eliminate or reduce these risks.

### Policy

Atlantic Roofers Limited/North Shore Roofing Ltd. is committed to ensuring that Ergonomics are included in our workplace health and safety objectives.

In accordance with provisions outlined in applicable provincial Workers Compensation guidelines and industry best practices, Atlantic Roofers Limited/North Shore Roofing Ltd. shall:

1. Recognize that any employee may express his/her concern to their direct supervisor/foreman, or the JHSC for the work area in question.
2. Address Ergonomic issues through discussion between the employee, supervisor/foreman, and if required the JHSC for the work area in question.
3. Instruct all employees to consider ergonomic aspects of specific duties.
4. Provide reasonable and suitable ergonomic aids, where required to enhance the safe and ergonomic aspects of work performance.
5. Include ergonomic issues as an integral part of our annual facilities hazard assessment.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Harassment Policy

---

Section 14.5

## **14.5 Harassment Policy**

### **Purpose**

The purpose of this policy is to assist in developing a working environment in which harassment & bullying are known to be unacceptable and where individuals have the confidence to bring forward their concerns about harassment & bullying, should it arise, in the knowledge that their concerns will be dealt with appropriately and fairly.

### **Policy**

Atlantic Roofers Limited/North Shore Roofing Ltd. in cooperation with our employees is committed to maintaining a healthy environment, that is free from harassment, intimidation, threats and violent acts.. Atlantic Roofers Limited/North Shore Roofing Ltd. has developed a companywide policy intended to prevent harassment of its employees and to deal quickly and effectively with any incident that might occur. Harassment will not be ignored, condoned or tolerated.

### **Definition of Harassment**

Harassment is an unwelcome physical, visual or verbal conduct. It is against the law. Harassment may include verbal or practical jokes, insults, threats, personal comments or innuendo. It may take the form of posters, pictures or graffiti. It may involve touching, stroking, pinching or any unwelcome physical contact. Any behavior that insults or intimidates is harassment if a reasonable person should have known that the behavior was unwelcome.

The Human Rights Code protects everyone within provincial jurisdiction from harassment and other forms of discrimination on the basis of race, religion, sex (including pregnancy and sexual orientation), marital status, physical disability, political opinion, color of ethnic, national or social origin and age (in employment only, between the ages of nineteen and sixty-five).

Even the smallest amount of harassment in the workplace can affect morale, productivity, and profitability. All incidents of this type will be held in the strictest confidence and dealt with in a concerned and respectful manner.

### **Reporting Process**

When an employee identifies they have become a victim of harassment, the following action should be taken:

1. In an assertive manner, the complainant should make his/her unequivocal disapproval known to the offender immediately. Keep a written record of offenses including dates and nature of behavior and name of witnesses (if any). Inform the offender that this behavior is being documented.
2. The complainant should notify their Supervisor if the above actions do not stop the offender's behavior.
3. If the complainant does not wish to discuss their allegation with their supervisor for any reason, the complainant can alternatively contact Atlantic Roofers/North Shore Roofing, senior management.

You also have a right to file a complaint with your provincial Human Rights Commission within six months of the last incident.

### **Resolution**

The complaint of harassment will be treated confidentially at the most appropriate level of management. The seriousness and effects of the offense will be discussed with the offender. Disciplinary action will be taken without repercussions to the complainant.

## Training

Ongoing training and education will be provided to all employees through information brochures and formal training as it is appropriate for our operations.

## Emergencies

For immediate assistance in an emergency (assault, direct threat of violence, suicide attempt, weapons, and robbery) or any crime in progress, dial 9-1-1.

## Reporting a situation that you are uncomfortable with

Contact your immediate Supervisor, Branch Manager or Atlantic Roofers/North Shore Limited Branch Manager to provide the details of what you witnessed or experienced. All information given will be recorded and an investigation will be conducted.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Modified Duty Policy

---

Section 14.6

## 14.6 Modified Duty Policy

### Purpose

The purpose of a modified duty program enables Atlantic Roofers Limited/North Shore Roofing Ltd. to promote a timely return to work for its injured employees.

Modified duties are based upon the promise that injured workers want to return to their jobs. This policy is intended to assist the injured workers make a speedy recovery and accomplish a successful return to work. Employers and employees will meet on an annual basis to discuss the program.

### Policy

Worker's Compensation describes Modified Work as any job, task, function or combination of tasks or functions that a worker, who suffers from a diminished capacity, temporary or permanent partial disability, may perform, safely and for compensation, without risk of re-injury or aggravation of disability or risk to another, which in total, would not have been performed by that worker.

Atlantic Roofers Limited/North Shore Roofing Ltd. recognizes the obligation as stated in legislation, to offer re-employment to employees injured at work. In addition Atlantic Roofers Limited/North Shore Roofing Ltd. feels a moral obligation to try and provide re-employment to our injured workers. The approach benefits both the Employer and the Employee as follows:

### Employee Benefits

1. Financial impact on employees is reduced as an employee is earning full wages instead of being paid a fraction of his normal wages while on benefits.
2. Research shows the longer an injured worker is off work due to an injury, the less likely it is that they will return to work. Injured workers who are off work for more than one year only have a 25% chance of returning to the workforce while those off for two years or more have a 1% chance.

### Employer Benefits

1. Reduces loss of production
2. Assessment costs are reduced due to employees being back to work instead of being home on benefits
3. Reduces retraining costs associated with a replacement work

### Modified Duty Program

The Modified Duty Program will be implemented using one of two methods:

1. **Gradual Return** - If a worker can safely return to work but is unable to resume full duties, they can take part in a gradual return program. This program allows the worker to build up the number of hours worked gradually and the injured worker gradually takes on increasingly demanding tasks. The gradual return program will be assessed on a case by case basis, but most will take from two to eight weeks. Health care treatment may continue during this period.
2. **Modified Work Duties** - The tasks performed by a worker while on a Modified Duty Program could include their pre accident duties or different duties. The method of return to work will be approved in consultation with the WHSCC, injured worker, the employer, the attending physician and/or any health care providers and the union, if applicable. The only requirement is that the duties do not aggravate the injury. The Light/Modified Work Program will be assessed on a case by case basis, but most will take from two to twelve weeks. After twelve weeks if the employee is unable to return to full duties, he/she will be directed to their treating health care provider for additional medical directions.

## Modified Duty Program (con't)

Both programs can be initiated within days of an injury depending upon its nature. With each of these approaches, it is important to try and get the worker back to work. It is essential that this work be rewarding and of value not only to the worker, but to the employee. It may be necessary to modify the jobsite while the worker is recovering or permanently if the worker is unable to resume all of their functions after they have fully recovered.

### Modified Work

- May include regular work that has been changed, redesigned or physically modified.
- May consist of reductions in time or volume of work performed.
- May be work that is normally performed by others.
- May be work that has been specifically designed or designated for a worker participating in a modified work program.
- Must be productive, and the results of the work must have value.

### Supervisor's Responsibilities

1. Supervisors have a responsibility to determine what modified work positions are available within their job sites.
2. Supervisors must cooperate fully in the implementation of the program.
3. Supervisors must provide both meaningful and productive work to the worker. When offering the injured worker a specific job, use the "Offer of Modified Work Form".
4. The modified work program must be applied consistently, fairly and equally to all participants.
5. The supervisor must work with the employee to set realistic goals and expectations.
6. Supervisors must consider other workers when placing injured worker in modified work positions.
7. Supervisors must monitor the worker's progress using the "Employee Progress Evaluation form". Each case will determine the frequency.
8. Workers MUST NOT return to regular duties without the doctor's consent in writing.

### Worker's Responsibilities

1. If a worker suffers personal injury by an accident, regardless of whether he/she is injured, seeks medical aid, then the worker shall, as soon as possible, after the accident, give notice to the supervisor and/or Manager of Atlantic Roofers Limited/North Shore Roofing Ltd.
2. Before or after going to a physician, the worker must receive the "Letter to the Physician and the Treatment Form" from his/her supervisor or designate.
3. Employees have a moral obligation to return to the workplace when able to do so.
4. Employees will abide by the restrictions outlined by the physician and will not deviate from such restrictions.
5. Workers must notify his/her supervisor or designate of any additional doctor's visits.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>M-14-1</b>
Occupational Health & Safety Program	Title: <b>Letter to Employee's Physician</b>	

Date: \_\_\_\_\_

Dear Dr. \_\_\_\_\_,

\_\_\_\_\_ employed with Atlantic Roofers Limited/North Shore Roofing Ltd.  
(Employee's Name)

as \_\_\_\_\_.  
(Job Title)

In accordance to Workers' Compensation and Atlantic Roofers Limited/North Shore Roofing Ltd. "Modified Duty Program" policies, the Company has developed a Modified Work Program that will allow for an employee's early return to suitable work following most injuries or illness, while taking into consideration any medical restrictions that may exist.

To assist us, please indicate on the attached forms:

- Whether this employee is medically fit, fit with restrictions, or unfit for return to work.
- An estimated return to work date.
- Any job restrictions you may feel are necessary.
- Recommended date when these restrictions should be reviewed.

Should you have any questions regarding this employee's job demands, our modified program, or the completion of this form, please contact \_\_\_\_\_ at \_\_\_\_\_.

Thank you for your participation in helping make our rehabilitation program a success.

Yours truly,

\_\_\_\_\_  
Atlantic Roofers Limited/North Shore Roofing Ltd. Representative

<b>Atlantic Roofers Limited North Shore Roofing Ltd</b>	Date of last Revision: January 2018	Document No. <b>M-14-2</b>
Occupational Health & Safety Program	Title: <b>Treatment From Physician</b>	
		Page 1 of 2

# Personal Hygiene Policy

---

Section 14.7

## 14.7 Personal Hygiene Policy

### Purpose

Atlantic Roofers Limited/North Shore Roofing Ltd. requires all employees to present themselves in a professional manner, with regard to attire, personal hygiene and appearance. These standards are in keeping with our organizational practices of appropriate business conduct, professionalism, dress code and safety.

### Policy

Proper hygiene can help to prevent the spread of disease and in some cases; poor hygiene can be a safety hazard. Atlantic Insulated Wall Panels Inc. employees are expected to meet hygiene requirements during regular business hours and/or while sharing hotel rooms or vehicles with coworkers, for the duration of their employment.

1. Maintain personal cleanliness by bathing daily.
2. Oral hygiene (brushing of teeth) required.
3. Use deodorant / anti-perspirant to minimize body odors.
4. No heavily scented perfumes, colognes and lotions. These can cause allergic reactions, migraines and respiratory difficulty for some employees.
5. Clean and trimmed fingernails.
6. Wash hands after eating, or using the restrooms.
7. Clothing must be clean, in good condition and fit appropriately.
8. Secured long hair (hair must be tied back to prevent potential for being caught in equipment).
9. Clothing must not interfere with the safe operation of equipment.
10. Limited jewelry and no dangling or large jewelry that may create a safety hazard to self or others.
11. Tattoos that are perceived as offensive, hostile or that diminish the effectiveness of the employee's professionalism must be covered, and not visible.

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*

# Prevention of Workplace Violence Policy

---

Section 14.8

## 14.8 Prevention of Workplace Violence Policy

### Purpose

Atlantic Roofers Limited/North Shore Roofing Ltd. maintains a zero tolerance standard of violence in the workplace. The purpose of this policy is to provide Atlantic Roofers Limited/North Shore Roofing Ltd. employees guidance that will maintain an environment at and within Atlantic Roofers Limited/North Shore Roofing Ltd property and events that is free of violence and the threat of violence.

### Policy

The management of Atlantic Roofers Limited/North Shore Roofing Ltd. recognizes the potential for workplace violence and other aggressive behavior directed at our employees. We will not tolerate behavior from anyone that intimidates, threatens, harasses, abuses, injures or otherwise victimizes our employees and will take whatever steps are appropriate to protect our employees from the potential hazards associated with workplace violence. We are committed to providing our employees with an appropriate level of protection from the hazards associated with workplace violence.

### Management Responsibilities

1. Inform employees if they are working in an area where there is a potential for violence and identify any risks that are specific to that area.
2. Ensure that appropriate procedures are in place to minimize the risk to our employees from violence.
3. Ensure that employees are trained in recognizing and responding to situations involving workplace violence.
4. Ensure that every reported incident of workplace violence is investigated and potential areas for improvement are identified.

### Employee Responsibilities

1. Employees of Atlantic Roofers Limited/North Shore Roofing Ltd. are required to be familiar with and follow the procedures that are in place to protect them from workplace violence.
2. All employees must participate in the instruction of workplace violence prevention.
3. Employees are required to immediately report all incidents of workplace violence to their supervisor or foreman.
4. Employees are also responsible for participating in work site hazard assessments and implementing controls and procedures to eliminate or control the associated hazards.

No employee will be penalized, reprimanded or in any way criticized when acting in good faith while following the procedures for addressing situations involving workplace violence

*\*The policies and procedures contained within this Health and Safety program do not take precedence over any Occupational Health Safety and/or Environmental legislation in the jurisdiction in which the work is being carried out. All employees and contractors will familiarize themselves with all Provincial, Federal and/or State Occupational Health, Safety and Environmental Acts, Regulations, Policies and other legislative requirements prior to commencing work on any site or project.*
